UNITED STATES GOVERNMENT PRINTING OFFICE WASHINGTON : 1931 PUBLISHED UNDER THE AUTHORITY OF THE INTERNATIONAL BOUNDARY COMMISSIONERS

WASHINGTON, October 27, 1931.

The Honourable

The Minister of the Interior of Canada, Ottawa.

The Honourable

THE SECRETARY OF STATE OF THE UNITED STATES,

Washington.

Sirs:

We have the honour to submit herewith our printed joint report upon the reestablishment of the section of the international boundary between Canada and the United States from the Northwesternmost Point of Lake of the Woods to Lake Superior, together with a volume of triangulation sketches and an atlas of thirty-six signed joint maps of the boundary as now established in accordance with the provisions of Article V of the treaty between Great Britain and the United States signed at Washington April 11, 1908, and Article I of the treaty between His Britannic Majesty in respect of Canada and the United States signed at Washington February 24, 1925.

This report is the fourth of a series of seven reports being prepared by the International Boundary Commission under the provisions of existent boundary treaties. The seven reports, together with their accompanying maps, will cover the survey and demarcation of the entire boundary between Canada and the United States and between Canada and Alaska, with the exception of that part of the boundary through the St. Lawrence River and the Great Lakes which was reestablished and reported upon by the International Waterways Commission under the special provisions of Article IV of the treaty of April 11, 1908.

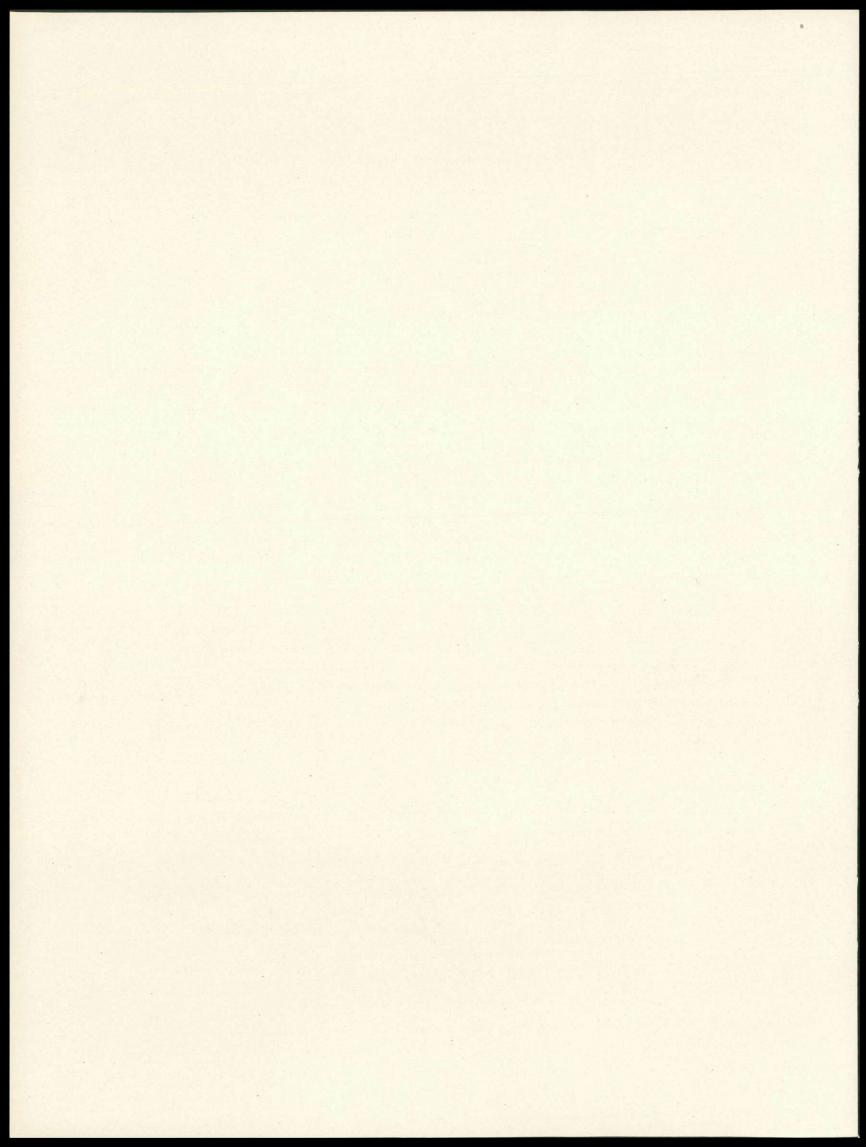

The signed originals of the report and the originals of each of the thirty-six boundary maps have been prepared in quadruplicate and two originals of the report and two sets of the original maps, bound in atlas form, are transmitted herewith to each Government.

Very truly yours,

back

His Britannic Majesty's Commissioner.

United States Commissioner.

# INTRODUCTION

This report of the commissioners upon the reestablishment of the section of the international boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior is submitted to the two Governments in accordance with the provisions of Article V of the treaty of 1908, which stipulates that the commissioners "shall also prepare in duplicate and file with each Government a joint report or reports describing in detail the course of the boundary so marked by them and the character and location of the several monuments and boundary marks and ranges marking it." The report includes an account of all the field and office work done by the commission in carrying out the provisions of Article V of the treaty of 1908 between the United States and Great Britain and the further provisions of Article I of the treaty of 1925 between the United States and His Britannic Majesty in respect of the Dominion of Canada.

The field operations of the commission in reestablishing this part of the boundary under the provisions of the above-mentioned treaties comprised a careful retracement of the boundary as adopted under the treaty of 1842 and as shown on maps prepared by Commissioners Barclay and Porter in 1822–1824 under the provisions of the treaty of Ghent; the establishment of boundary reference monuments along the shores of the waterways through which the line runs; the determination of the geographic positions of the monuments and of the turning points of the boundary line by means of accurate triangulation and traverse; and the mapping of a strip of terrain adjacent to the line to show the shore lines and other topographic features of the boundary waterways.

The office work consisted largely of the preparation of the boundary maps and of making the geodetic computations necessary to determine the geographic positions of the monuments and turning points of the boundary line. Article V of the treaty states that "the course of the entire boundary as described and laid down as afore-said and as monumented by said Commissioners shall be marked by them upon quadruplicate sets of accurate modern charts prepared or adopted by them for that purpose, and that said charts so marked shall be certified and signed by them and two duplicate originals thereof shall be filed with each Government \* \* \*."

The "accurate modern charts" specified in the foregoing provision of the treaty comprise 36 modern topographic maps and an index sheet, prepared from the surveys made by the commission. The maps have been engraved on copper plates and printed from lithographic stones on heavy chart paper 26 by 38 inches in size. They show the character of the country along the boundary, the course of the boundary line, and the location of all boundary monuments, boundary reference monuments, and turning points of the boundary line. The four original sets of these maps, specified by the treaty, have been bound in atlas form, and two sets have been filed

XIII

#### INTRODUCTION

with each Government. Copies of each map have been published in sheet form for distribution to other governmental agencies and to the depository libraries of the two countries.

The description and definition of the line, as reestablished by the commissioners and as marked by them on the 36 boundary maps which accompany this report, is set forth in tabular form on pages 114 to 187, inclusive. It includes the geographic positions of all the boundary turning points, the lengths and azimuths of the connecting straight-line boundary courses, the geographic positions of the boundary monuments and the boundary reference monuments along the waterways, and the lengths and azimuths of the lines from the reference monuments to the boundary turning points which they reference.

The geographic positions of all the boundary points and the positions of all the triangulation and traverse stations have been computed on the North American geodetic datum of 1927. This work comprised the computation of approximately 5,100 geodetic positions. The results are set forth in the tables of the description of the boundary and in the tables of geographic positions of boundary triangulation and traverse stations, which are presented in Appendix V, pages 228 to 356.

Sketches of the network of the triangulation and the traverse, comprising 40 sheets, have been prepared and are published in portfolio form to accompany this report.

The geodetic and topographic data and the boundary maps and triangulation sketches, representing the work done by the boundary commission, have been and should continue to be of much value to other agencies of the two Governments and to engineers and surveyors as the foundation for other and more extensive surveys of the region adjacent to the boundary line.

XIV

# TREATIES OF 1908 AND 1925, APPOINTMENTS OF THE COM-MISSIONERS, AND RESERVATION OF LANDS ALONG THE INTERNATIONAL BOUNDARY

# TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE UNITED KINGDOM CONCERNING THE BOUNDARY BETWEEN THE UNITED STATES AND THE DOMINION OF CANADA FROM THE ATLANTIC OCEAN TO THE PACIFIC OCEAN

## Signed at Washington, April 11, 1908

## (Ratifications exchanged at Washington, June 4, 1908)

The United States of America and His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, and Emperor of India, being desirous of providing for the more complete definition and demarcation of the international boundary between the United States and the Dominion of Canada, have for that purpose resolved to conclude a treaty, and to that end have appointed as their Plenipotentiaries:

The President of the United States of America, Elihu Root, Secretary of State of the United States; and

His Britannic Majesty, Right Honorable James Bryce, O. M., his Ambassador Extraordinary and Plenipotentiary at Washington;

Who, after having communicated to each other their respective full powers, which were found to be in due and proper form, have agreed to and concluded the following articles:

#### ARTICLE I

#### THE BOUNDARY THROUGH PASSAMAQUODDY BAY

The High Contracting Parties agree that each shall appoint, without delay, an expert geographer or surveyor to serve as Commissioners for the purpose of more accurately defining and marking the international boundary line between the United States and the Dominion of Canada in the waters of Passamaquoddy Bay from the mouth of the St. Croix River to the Bay of Fundy, and that in defining and marking said boundary line the Commissioners shall adopt and follow, as closely as may be, the line surveyed and laid down by the Commissioners appointed under Article II of the Treaty of July 22, 1892, between the United States and Great Britain, so far as said Commissioners agreed upon the location of said line, namely:

(1) From a point at the mouth of the St. Croix River defined by the ranges established by them, by a connected series of six straight lines defined by ranges and cross ranges, to a point between Treat Island and Friar Head, likewise defined by ranges and cross ranges established by them; and also

(2) From a point in Quoddy Roads, defined by the intersection of the range passing through the position of the Beacon of 1886 and Lubec Channel Light, with a range established by them on the west shore of Quoddy Roads along the course of this latter range, which is about  $80^{\circ} 35'$  east of true south, into the Bay of Fundy.

96030-31-2

In ascertaining the location of the above-described line, the Commissioners shall be controlled by the indications of the range marks and monuments established along its course by said former Commissioners and by the charts upon which the said Commissioners marked the line as tentatively agreed upon by them.

The remaining portion of the line, lying between the two above-described sections, and upon the location of which said former Commissioners did not agree, shall pass through the center of the Lubec Narrows Channel between Campo Bello Island and the mainland, and, subject to the provisions hereinafter stated, it shall follow on either side of the said Narrows such courses as will connect with the parts of the line agreed upon as aforesaid, and such boundary shall consist of a series of straight lines defined by distances and courses; but inasmuch as differences have arisen in the past as to the location of the line with respect to Pope's Folly Island above Lubec Narrows and with respect to certain fishing grounds east of the dredged channel below Lubec Narrows, it is agreed that each of the High Contracting Parties shall present to the other within six months after the ratification of this Treaty a full printed statement of the evidence, with certified copies of original documents referred to therein which are in its possession, and the arguments upon which it bases its contentions, with a view to arriving at an adjustment of the location of this portion of the line in accordance with the true intent and meaning of the provisions relating thereto of the treaties of 1783 and 1814 between the United States and Great Britain, and the award of the Commissioners appointed in that behalf under the treaty of 1814; it being understood that any action by either or both Governments or their representatives authorized in that behalf or by the local governments on either side of the line, whether prior or subsequent to such treaties and award, tending to aid in the interpretation thereof, shall be taken into consideration in determining their true intent and meaning. Such agreement, if reached, shall be reduced to writing in the form of a protocol and shall be communicated to the said Commissioners, who shall lay down and mark this portion of the boundary in accordance therewith and as herein provided.

In the event of a failure to agree within six months after the date of exchanging the printed statements aforesaid, the question of which Government is entitled to jurisdiction over such island and fishing grounds under treaty provisions, and proceedings thereunder, interpreted in accordance with their true intent and meaning as above provided, and by reason of any rights arising under the recognized principles of international law, shall be referred forthwith for decision upon the evidence and arguments submitted as aforesaid, with such additional statement of facts as may be appropriate, and an argument in reply on each side, to an arbitrator to be agreed upon by the two Governments, or, in case of a failure to agree, to be appointed by a third Power selected by the two Governments by common accord, or, if no agreement is thus arrived at, each Government shall select a different Power and the choice of the arbitrator shall be made in concert by the Powers thus selected. The decision of such arbitrator shall be final, and the line shall be laid down and marked by the said Commissioners in accordance therewith and as herein provided.

The arbitrator shall be requested to deliver, together with his award, a statement of all the costs and expenses incurred by him in connection with the arbitration, which shall forthwith be repaid by the two Governments in equal moieties.

It is further agreed that if, under the foregoing provisions, the boundary be located through the channel to the east of the dredged channel above mentioned, the latter shall be equally free and open for the passage of ships, vessels, and boats of both parties.

The entire boundary shall be marked by permanent range marks established on land and, if desirable in the opinion of Commissioners, by buoys in the water, so far as practicable, and by such other boundary marks and monuments and at such points as the Commissioners may determine to be necessary; but the said Commissioners shall proceed to define and mark and chart the portion of the line agreed upon by the former Commissioners under the Treaty of 1892 aforesaid without waiting for the final determination of the location of the remaining portion of the line.

The course of the said boundary line as defined and marked as aforesaid shall be laid down by said Commissioners on quadruplicate sets of accurate modern charts prepared or adopted by

TREATY OF 1908

them for that purpose, which charts shall be certified and signed by the Commissioners, and two duplicate originals thereof shall be filed by them with each Government; and they shall also prepare in duplicate and file with each Government a joint report or reports under their hands and seals describing in detail the course and location of the boundary line and the range marks and monuments and buoys marking it.

The line so defined and laid down shall be taken and deemed to be the international boundary from the Bay of Fundy to the mouth of the St. Croix River, as established by treaty provisions and the proceedings thereunder.

## ARTICLE II

# THE BOUNDARY FROM THE MOUTH TO THE SOURCE OF THE ST. CROIX RIVER

Whereas Article II of the Treaty of 1783 between the United States and Great Britain provides that a line drawn along the middle of the River St. Croix from its mouth in the Bay of Fundy to its source shall be, between those points, the international boundary between the United States and the British possessions in North America, and the identity of the River St. Croix has been determined by the Commissioners appointed for that purpose under Article V of the Treaty of 1794 between the United States and Great Britain, and the location of the mouth and the source of said river has been duly established, and the course of said river has been described, surveyed, and charted by said Commissioners, as appears from their joint report dated the 25th day of October, 1798, and from the chart or plan of said river prepared and filed by them with said report, but said line of boundary along the middle of said river was not laid down by them on said chart or plan, and was not marked or monumented by them along the course of said river; and whereas, pursuant to an additional article, dated March 15, 1798, supplementing the provisions of the Treaty of 1794 above referred to, a monument was erected by joint action of the two Governments marking the source of the River St. Croix, but said line of boundary through the River St. Croix has not otherwise been monumented and has never been laid down on charts by joint action of the two Governments: therefore, in order to complete and render thoroughly effective the demarcation of the boundary described and established as aforesaid,

It is agreed that each of the High Contracting Parties shall appoint, without delay, an expert geographer or surveyor as a Commissioner, and the Commissioners so appointed shall jointly lay down upon accurate modern charts, to be prepared or adopted by them for that purpose, the line of boundary along the middle of the River St. Croix from its mouth to its source as defined and established by the existing treaty provisions and the proceedings thereunder, above referred to, with the agreed understanding, however, that the line of boundary through said river shall be a water line throughout and shall follow the center of the main channel or thalweg as naturally existing, except where such course would change, or disturb, or conflict with the national character of an island as already established by mutual recognition and acquiescence, in which case the line shall pass on the other side of any such island, following the middle of the channel nearest thereto, or, if the Commissioners find that the national character of any island is in dispute, the question of its nationality shall be submitted by them to their respective Governments, with a chart or map certified jointly by said Commissioners, showing the depth and volume of the water at its high and low stages between such island and the river banks on each side and indicating the course of the main channel of the river as it passes such island, together with a descriptive statement by said Commissioners showing the reasons for selecting such channel as the main channel; and in all such cases the High Contracting Parties agree that the location of the boundary with respect to each island in dispute shall be determined and settled in accordance with the following rules:

(1) The nationality of each island in dispute shall be determined by the predominance of the claims established on either side to such island, arising from the exercise of jurisdiction and sovereignty over it, including such exercise of jurisdiction by the local governments on either side of the line.

(2) The burden of proving the nationality of any such island shall be upon the party seeking to change the general course of the boundary as above prescribed so as to include such island on its own side of the boundary.

(3) The selection by the Commissioners of the main channel passing such island shall not be conclusive upon the parties hereto and is subject to review, but the burden of proving the main channel to be other than the one selected shall be upon the party proposing the change.

The Government proposing such change in the prescribed course of the boundary shall, upon the submission of the question of the nationality of any island or islands by the Commissioners as aforesaid, promptly present to the other Government a printed statement, with certified copies of any original documents in its possession referred to therein, showing the grounds and arguments upon which its claim of jurisdiction and ownership with respect to such island rests. Unless an agreement is reached upon the presentation of such statement, the Government to which such statement is presented shall within six months after its receipt present in reply a similar statement showing the grounds and arguments upon which the claims of the other Government are contested. If an agreement is reached between the two Governments, it shall be reduced to writing in the form of a protocol and shall be communicated to the said Commissioners, who shall proceed to lay down and mark the boundary so as to leave such island on the side of the boundary to which it is shown it belongs, in accordance with the determination of its nationality arrived at as aforesaid.

In the event of a failure by the two Governments to come to an agreement within six months after the presentation of the printed statements in reply herein above provided for, then the question of the nationality of the islands in dispute shall be referred forthwith for decision under the rules herein above set forth for the determination of that question, and under the recognized principles of international law not inconsistent therewith, and upon the evidence and arguments submitted as aforesaid, with such additional statement of facts as may be appropriate, and such further printed argument on each side as may be desired, to an arbitrator to be agreed upon by the two Governments, or, in case of a failure to agree, to be appointed by a third Power selected by the two Governments by common accord, or, if no agreement is thus arrived at, each Government shall select a different Power and the choice of the arbitrator shall be made in concert by the Powers thus selected. The decision of such arbitrator shall be final, and the line shall be laid down and marked by the said Commissioners in accordance therewith and as herein provided.

The arbitrator shall be requested to deliver, together with his award, a statement of all the costs and expenses incurred by him in connection with the arbitration, which shall forthwith be repaid by the two Governments in equal moieties.

It is further agreed that so far as practicable the said Commissioners shall establish boundary monuments and ranges and buoys marking the course and location of the said line, and showing on which side of the boundary the several islands lying in said river belong, wherever in their judgment it is desirable that the boundary be so marked.

The charts upon which the boundary is marked as aforesaid shall be in quadruplicate, and shall be certified and signed by said Commissioners, and two duplicate originals thereof shall be filed by them with each Government, and it shall also be the duty of said Commissioners to prepare in duplicate, and file with each Government, a joint report under their hands and seals describing the line so marked by them and the monuments and range marks and buoys marking it.

The line so defined and laid down shall be taken and deemed to be the international boundary from the mouth to the source of the St. Croix River as established by treaty provisions and the proceedings thereunder as aforesaid.

#### ARTICLE III

# THE BOUNDARY FROM THE SOURCE OF THE ST. CROIX RIVER TO THE ST. LAWRENCE RIVER

Whereas the remonumenting of the course of the boundary defined and laid down under the provisions of Articles I and VI of the Treaty of August 9, 1842, between the United States TREATY OF 1908

and Great Britain has already been undertaken without a formal treaty agreement, but by the joint and concurrent action of the Governments of the United States and Great Britain, certain monuments between Vermont and Canada having been relocated in 1849, and the portion of said boundary extending between Hall's Stream and the St. Lawrence River in part having been remonumented in recent years and in part is now being remonumented under such action on both sides; and whereas the Commissioners appointed under Article VI of the Treaty of 1842 aforesaid were required to and did mark by monuments the land portion only of said line, and were not required to and did not mark by monuments the portions of the boundary extending along water courses, with the exception that the nationality of the several islands in the St. John River was indicated by monuments erected thereon and a series of monuments was placed by them along the edge of certain of the water courses to fix the general direction of the boundary, most of which monuments have since disappeared, but the entire boundary, including its course through the waterways as well as on land, was charted and marked on maps by said Commissioners under the provisions of Article VI above referred to, and the nationality of the respective islands in the St. John River was determined by them, as appears from the joint report filed by said Commissioners dated June 28, 1847, and the series of maps signed by said Commissioners and filed with their joint report; and whereas the portion of the line through said waterways has not since been monumented or marked along its course by joint action of the two Governments, and the monuments placed by said Commissioners along the land portion of said boundary require repairing and renewing where such work has not already been done in recent years, and additional or supplementary intermediate monuments at convenient points are required under modern conditions: therefore, in order to carry on and complete the work already undertaken as aforesaid, and to reestablish the location of said boundary and render thoroughly effective the demarcation of the said boundary as existent and established,

It is agreed that each of the High Contracting Parties shall appoint, without delay, an expert geographer or surveyor as a Commissioner, and under the joint direction of such Commissioners the lost or damaged boundary monuments shall be relocated and repaired, and additional monuments and boundary marks shall be established wherever necessary in the judgment of the Commissioners to meet the requirements of modern conditions along the course of the land portion of said boundary, and where the said boundary runs through waterways it shall be marked along its course, so far as practicable, by buoys and monuments in the water and by permanent ranges established on the land, and in such other way and at such points as in the judgment of the Commissioners it is desirable that the boundary be so marked; and it is further agreed that the course of the entire boundary, as described in Article I of the Treaty of 1842 and as laid down as aforesaid under Article VI of that Treaty, shall be marked by said Commissioners upon quadruplicate sets of accurate modern charts prepared or adopted by them for that purpose, and that said charts so marked shall be certified and signed by them and two duplicate originals thereof shall be filed with each Government, and said Commissioners shall also prepare in duplicate and file with each Government a joint report or reports describing in detail the course of the boundary so marked by them, and the character and location of the several monuments and boundary marks and ranges marking it.

The line so defined and laid down shall be taken and deemed to be the international boundary as defined and laid down under Articles I and VI of the said Treaty of 1842.

## ARTICLE IV

# THE BOUNDARY FROM ITS INTERSECTION WITH THE ST. LAWRENCE RIVER TO THE MOUTH OF PIGEON RIVER

The High Contracting Parties agree that the existing International Waterways Commission, constituted by concurrent action of the United States and the Dominion of Canada and composed of three Commissioners on the part of the United States and three Commis-

5

sioners on the part of the Dominion of Canada, is hereby authorized and empowered to ascertain and reestablish accurately the location of the international boundary line beginning at the point of its intersection with the St. Lawrence River near the forty-fifth parallel of north latitude, as determined under Articles I and VI of the Treaty of August 9, 1842, between the United States and Great Britain, and thence through the Great Lakes and communicating waterways to the mouth of Pigeon River, at the western shore of Lake Superior, in accordance with the description of such line in Article II of the Treaty of Peace between the United States and Great Britain, dated September 3, 1783, and of a portion of such line in Article II of the Treaty of August 9, 1842, aforesaid, and as described in the joint report dated June 18, 1822, of the Commissioners appointed under Article VI of the Treaty of December 24, 1814, between the United States and Great Britain, with respect to a portion of said line and as marked on charts prepared by them and filed with said report, and with respect to the remaining portion of said line as marked on the charts adopted as treaty charts of the boundary under the provisions of Article II of the Treaty of 1842, above mentioned, with such deviation from said line, however, as may be required on account of the cession by Great Britain to the United States of the portion of Horse Shoe Reef in the Niagara River necessary for the light-house erected there by the United States in accordance with the terms of the protocol of a conference held at the British Foreign Office December 9, 1850, between the representatives of the two Governments and signed by them agreeing upon such cession; and it is agreed that wherever the boundary is shown on said charts by a curved line along the water the Commissioners are authorized in their discretion to adopt, in place of such curved line, a series of connecting straight lines defined by distances and courses and following generally the course of such curved line, but conforming strictly to the description of the boundary in the existing treaty provisions, and the geographical coordinates of the turning points of such line shall be stated by said Commissioners so as to conform to the system of latitudes and longitudes of the charts mentioned below, and the said Commissioners shall so far as practicable mark the course of the entire boundary line located and defined as aforesaid, by buoys and monuments in the waterways and by permanent range marks established on the adjacent shores or islands, and by such other boundary marks and at such points as in the judgment of the Commissioners it is desirable that the boundary should be so marked; and the line of the boundary defined and located as aforesaid shall be laid down by said Commissioners on accurate modern charts prepared or adopted by them for that purpose, in quadruplicate sets, certified and signed by the Commissioners, two duplicate originals of which shall be filed by them with each Government; and the Commissioners shall also prepare in duplicate and file with each Government a joint report or reports describing in detail the course of said line and the range marks and buoys marking it, and the character and location of each boundary mark. The majority of the Commissioners shall have power to render a decision.

The line so defined and laid down shall be taken and deemed to be the international boundary as defined and established by treaty provisions and the proceedings thereunder as aforesaid from its intersection with the St. Lawrence River to the mouth of Pigeon River.

#### Article V

# The Boundary from the Mouth of Pigeon River to the Northwesternmost Point of the Lake of the Woods

In order to complete and perfect the demarcation of the international boundary line between the United States and the Dominion of Canada from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of the Lake of the Woods, which boundary is defined in Article II of the Treaty of Peace between the United States and Great Britain dated September 3, 1783, and in Article II of the Treaty of August 9, 1842, between the United States and Great Britain, wherein is defined also the location of the said northwesternmost point of the Lake of the Woods, and the greater part of the said boundary is marked on charts covering that section of the boundary adopted as treaty charts of the boundary under the provisions of Article II of the Treaty of 1842 aforesaid, but has never been actually located or monumented along its course by joint action of the two Governments, and no joint survey of its course has been made since the survey under the direction of the Commissioners appointed under Article VII of the Treaty of December 24, 1814, between the United States and Great Britain, under whose direction the charts above mentioned were prepared,

It is agreed that each of the High Contracting Parties shall appoint, without delay, an expert geographer or surveyor as Commissioners, who shall reestablish and fix the actual location of said entire boundary described and charted as aforesaid, and designate the side of the boundary upon which each island adjacent to the boundary belongs, it being mutually understood that the boundary, so far as practicable, shall be a water line and shall not intersect islands lying along its course, and the Commissioners shall so far as practicable mark such boundary along its course by monuments and buoys and range marks, and such other boundary marks as the Commissioners may determine, and at such points as in their judgment it is desirable that the boundary shall be so marked; and it is further agreed that the course of the entire boundary as described and laid down as aforesaid and as monumented by said Commissioners shall be marked by them upon quadruplicate sets of accurate modern charts prepared or adopted by them for that purpose, and that said charts so marked shall be certified and signed by them and two duplicate originals thereof shall be filed with each Government, and said Commissioners shall also prepare in duplicate and file with each Government a joint report or reports describing in detail the course of the boundary so marked by them and the character and location of the several monuments and boundary marks and ranges marking it.

The line so defined and laid down shall be taken and deemed to be the international boundary as defined and established under the aforesaid treaties from the mouth of Pigeon River to the north-westernmost point of the Lake of the Woods.

# ARTICLE VI

# The Boundary from the Northwesternmost Point of the Lake of the Woods to the Summit of the Rocky Mountains

In order to complete and render thoroughly effective the demarcation of the international boundary between the United States and the Dominion of Canada from the northwesternmost point of the Lake of the Woods to the summit of the Rocky Mountains, which boundary, according to existing treaties, runs due south from said northwesternmost point to the forty-ninth parallel of north latitude and thence along that parallel to the summit of the Rocky Mountains, and has been surveyed and charted and monumented as appears from the series of twenty-four sectional maps covering this portion of the boundary prepared and filed by the Joint Commission appointed for that purpose by joint action of the two Governments in 1872,

It is agreed that each of the High Contracting Parties shall appoint, without delay, an expert geographer or surveyor as a Commissioner, and under the joint direction of such Commissioners lost or damaged monuments along the course of said boundary shall be relocated and repaired and additional monuments and boundary marks shall be established wherever necessary, in the judgment of the Commissioners, to meet the requirements of modern conditions and to render more effective the demarcation of the existent boundary established under the treaty provisions and proceedings thereunder as aforesaid; and it is further agreed that in carrying out these provisions the said Commissioners shall observe the agreement stated in the protocol of the final meeting, dated May 29, 1876, of the Joint Commission aforesaid, which is as follows:

"2. In the intervals between the monuments along the parallel of latitude, it is agreed that the line has the curvature of a parallel of 49° north latitude; and that such characteristic shall determine all questions that may hereafter arise with reference to the position of the boundary at any point between neighboring monuments.

"3. It is further agreed that, in the event of any of the said three hundred and eightyeight monuments or marks being obliterated beyond the power of recognition, the lost site or sites shall be recovered by their recorded position relatively to the next neighboring unobliterated mark or marks." It is further agreed that the said Commissioners shall mark upon quadruplicate sets of accurate modern charts prepared or adopted by them for that purpose the entire course of said boundary and the location of the boundary monuments and marks established along the course of said boundary, and two duplicate originals thereof shall be filed with each Government, and said Commissioners shall also prepare in duplicate and file with each Government a joint report describing in detail the work done by them in replacing and repairing lost or damaged monuments and the character and location of the several monuments and boundary marks placed by them along said boundary.

The line so laid down and defined shall be taken and deemed to be the international boundary as defined and established by treaty provisions and the proceedings thereunder as aforesaid from the northwesternmost point of the Lake of the Woods to the summit of the Rocky Mountains.

#### ARTICLE VII

# The Boundary from the Summit of the Rocky Mountains to the Gulf of Georgia

Whereas, by concurrent action of the Government of the United States and the Government of Great Britain in 1902 and 1903, Commissioners were designated to act jointly for the purpose of renewing lost or damaged monuments and placing additional monuments where such were needed throughout the course of the boundary along the forty-ninth parallel of north latitude, from the summit of the Rocky Mountains westward to the eastern shore of the Gulf of Georgia, as defined in Article I of the Treaty of June 15, 1846, between the United States and Great Britain and as marked by monuments along its course and laid down on a series of charts, seven in number, by a Joint Commission organized in 1858 for that purpose and composed of two Commissioners appointed one by each Government, which charts, duly certified and authenticated in duplicate by said Commissioners, were approved and adopted by the two Governments, as appears from the declaration in writing to that effect signed on February 24, 1870, at Washington by duly authorized Plenipotentiaries of the respective Governments, and it appearing that the remonumenting of this line by the Commissioners first above referred to is now approaching completion;

It is hereby agreed by the High Contracting Parties that when such work is completed the entire course of said boundary, showing the location of the boundary monuments and marks established along the course of the boundary, shall be marked upon quadruplicate sets of accurate modern charts prepared or adopted for that purpose, and the said Commissioners, or their successors, are hereby authorized and required to so mark the line and designate the monuments on such charts, two duplicate originals of which shall be filed with each Government, and the said Commissioners, or their successors, shall also prepare in duplicate and file with each Government a joint report describing in detail the work done by them in replacing and repairing lost or damaged monuments and the character and location of the several monuments and boundary marks placed by them along said boundary.

The line so laid down and defined shall be taken and deemed to be the international boundary as defined and established by treaty provisions and the proceedings thereunder as aforesaid, from the summit of the Rocky Mountains to the eastern shore of the Gulf of Georgia.

#### ARTICLE VIII

#### THE BOUNDARY FROM THE FORTY-NINTH PARALLEL TO THE PACIFIC OCEAN

The High Contracting Parties agree that each shall appoint, without delay, an expert geographer or surveyor to serve as Commissioners for the purpose of delineating upon accurate modern charts, prepared or adopted by them for that purpose, the international boundary line between the United States and the Dominion of Canada from the forty-ninth parallel of north latitude along the middle of the channel which separates Vancouver's Island from the mainland

8

TREATY OF 1908

and the middle of the Haro Channel and of Fuca's Straits to the Pacific Ocean, as defined in Article I of the Treaty of June 15, 1846, between the United States and Great Britain, and as determined by the award made on October 21, 1872, by the Emperor of Germany as arbitrator pursuant to the provisions of Articles XXXIV-XLII of the Treaty of May 8, 1871, between the United States and Great Britain, and as traced out and marked on a quadruplicate set of charts prepared for that purpose and agreed upon and signed by the duly authorized representatives of the respective Governments, as appears from the protocol of a conference at Washington on March 10, 1873, between such representatives which was signed by them on that date, and as defined by them in a written definition of said boundary signed by them and referred to in and attached to said protocol, and it is agreed that the said Commissioners shall adopt in place of the curved line passing between Saturna Island and Patos Island as shown on said charts a straight line running approximately north and south through a point midway between the eastern point of Saturna Island and the western point of Patos Island and intersecting the prolongations of the two straight lines of the boundary now joined by a curved line. The entire line thus laid down shall consist of a series of connecting straight lines defined by distances and courses; and the Commissioners are authorized to select and establish such reference marks on shore as they may deem necessary for the proper definition and location on the water of the boundary aforesaid. A quadruplicate set of such charts, showing the lines so laid down and marked by them and the location of the several marks or monuments selected or established by them along its course, shall be signed by them and two duplicate originals thereof shall be filed by them with each Government, and the Commissioners shall also prepare in duplicate and file with each Government a joint report, or reports, describing in detail the course of said line and the boundary marks and their location along its course.

The line so defined and laid down shall be taken and deemed to be the international boundary, as defined and established by treaty provisions and the proceedings thereunder as aforesaid, from the forty-ninth parallel of north latitude along the middle of the channel which separates Vancouver's Island from the mainland and the middle of Haro Channel and of Fuca's Straits to the Pacific Ocean.

### ARTICLE IX

#### GENERAL PROVISIONS

The Commissioners appointed under the provisions of this Treaty shall proceed without delay to perform the duties assigned to them, but each Commissioner shall, before entering upon his duties, make oath in writing that he will impartially and faithfully perform his duties as such Commissioner.

In case a vacancy occurs in any of the Commissions constituted by this Treaty, by reason of the death, resignation, or other disability of a Commissioner, before the work of such Commission is completed, the vacancy so caused shall be filled forthwith by the appointment of another Commissioner by the party on whose side the vacancy occurs, and the Commissioner so appointed shall have the same powers and be subject to the same duties and obligations as the Commissioner originally appointed.

If a dispute or difference should arise about the location or demarcation of any portion of the boundary covered by the provisions of this Treaty and an agreement with respect thereto is not reached by the Commissioners charged herein with locating and marking such portion of the line, they shall make a report in writing jointly to both Governments, or severally each to his own Government, setting out fully the questions in dispute and the differences between them, but such Commissioners shall, nevertheless, proceed to carry on and complete as far as possible the work herein assigned to them with respect to the remaining portions of the line.

In case of such a disagreement between the Commissioners, the two Governments shall endeavor to agree upon an adjustment of the questions in dispute, and if an agreement is reached between the two Governments it shall be reduced to writing in the form of a protocol, and shall be communicated to the said Commissioners, who shall proceed to lay down and mark the

9

boundary in accordance therewith, and as herein provided, but without prejudice to the special provisions contained in Articles I and II regarding arbitration.

It is understood that under the foregoing articles the same persons will be appointed to carry out the delimitation of boundaries in the several sections aforesaid, other than the section covered by Article IV, unless either of the Contracting Powers finds it expedient for some reason which it may think sufficient to appoint some other person to be Commissioner for any one of the above-mentioned sections.

Each Government shall pay the expenses of its own Commissioners and their assistants, and the cost of marking and monumenting the boundary shall be paid in equal moieties by the two Governments.

#### ARTICLE X

This Treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty; and the ratifications shall be exchanged in Washington as soon as practicable.

In faith whereof the respective Plenipotentiaries have signed this Treaty in duplicate and have hereunto affixed their seals.

Done at Washington the 11th day of April in the year of our Lord one thousand nine hundred and eight.

Elihu Root [seal.] James Bryce [seal.]

# TREATY BETWEEN THE UNITED STATES OF AMERICA AND HIS BRITANNIC MAJESTY, IN RESPECT OF THE DOMINION OF CANADA, TO DEFINE MORE ACCURATELY AT CERTAIN POINTS AND TO COMPLETE THE INTERNATIONAL BOUNDARY BETWEEN THE UNITED STATES AND CANADA AND TO MAINTAIN THE DEMARCATION OF THAT BOUNDARY

# Signed at Washington, February 24, 1925

## (Ratifications exchanged at Washington, July 17, 1925)

The United States of America and His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India, in respect of the Dominion of Canada, desiring to define more accurately at certain points and to complete the international boundary between the United States and Canada and to maintain the demarcation of that boundary, have resolved to conclude a treaty for these purposes, and to that end have appointed as their respective Plenipotentiaries:

The President of the United States of America: Charles Evans Hughes, Secretary of State of the United States; and

His Britannic Majesty, in respect of the Dominion of Canada: The Honorable Ernest Lapointe, K. C., a member of His Majesty's Privy Council for Canada and Minister of Justice in the Government of that Dominion;

Who, after having communicated to each other their respective full powers, which were found to be in due and proper form, have agreed to and concluded the following articles:

#### ARTICLE I

Whereas Article V of the Treaty concerning the boundary between the United States and the Dominion of Canada concluded on April 11, 1908, between the United States and Great Britain, provided for the survey and demarcation of the international boundary line between the United States and the Dominion of Canada from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of Lake of the Woods, as defined by the Treaties concluded between the United States and Great Britain on September 3, 1783, and August 9, 1842;

And whereas Article VI of the said Treaty concluded on April 11, 1908, provided for the relocation and repair of lost or damaged monuments and for the establishment of additional monuments and boundary marks along the course of the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains, as established under existing treaties and surveyed, charted, and monumented by the Joint Commission appointed for that purpose by joint action of the Contracting Parties in 1872;

And whereas it has been found by surveys executed under the direction of the Commissioners appointed pursuant to the said Treaty of April 11, 1908, that the boundary line between the United States and the Dominion of Canada from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of Lake of the Woods as defined by the Treaties concluded on September 3, 1783, and August 9, 1842, is intersected by the boundary from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains as established under existing treaties and surveyed, charted, and monumented by the Joint Commission appointed for that purpose in 1872, at five points in Lake of the Woods adjacent to and directly south of the said northwesternmost point, and that there are two small areas of United States waters in Lake of the Woods, comprising a total area of two and one-half acres, entirely surrounded by Canadian waters; And whereas no permanent monuments were ever erected on these boundary lines north of the most southerly of these points of intersection;

The Contracting Parties, in order to provide for a more practical definition of the boundary between the United States and the Dominion of Canada in Lake of the Woods, hereby agree that this most southerly point of intersection, being in latitude  $49^{\circ}$  23' 04''.49 north, and longitude  $95^{\circ}$  09' 11''.61 west,<sup>1</sup> shall be the terminus of the boundary line heretofore referred to as the international boundary line between the United States and the Dominion of Canada from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of Lake of the Woods and the initial point of the boundary line heretofore referred to as the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains, in lieu of the said northwesternmost point.

The aforesaid most southerly point shall be located and monumented by the Commissioners appointed under the said Treaty of April 11, 1908, and shall be marked by them on the chart or charts prepared in accordance with the provisions of Articles V and VI of the said Treaty, and a detailed account of the work done by the Commissioners in locating said point, together with a description of the character and location of the several monuments erected, shall be included in the report or reports prepared pursuant to the said Articles.

The point so defined and monumented shall be taken and deemed to be the terminus of the boundary line heretofore referred to as the international boundary line between the United States and the Dominion of Canada, from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of Lake of the Woods and the initial point of the boundary line heretofore referred to as the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains.

#### ARTICLE II

Whereas Article VI of the Treaty concerning the boundary between the United States and the Dominion of Canada concluded on April 11, 1908, between the United States and Great Britain, provided for the relocation and repair of lost or damaged monuments and for the establishment of additional monuments and boundary marks along the courses of the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods south to the 49th parallel of north latitude and thence westward along said parallel of latitude to the summit of the Rocky Mountains, as established under existing treaties and surveyed, charted, and monumented by the Joint Commission appointed for that purpose by joint action of the Contracting Parties in 1872;

And whereas Article VI of the said Treaty concluded on April 11, 1908, further provides that in carrying out the provisions of that Article the agreement stated in the protocol of the final meeting of the said Joint Commission, dated May 29, 1876, should be observed, by which protocol it was agreed that in the intervals between the monuments along the 49th parallel of north latitude the boundary line has the curvature of a parallel of 49° north latitude;

And whereas the Commissioners appointed and acting under the provisions of Article VI of the said Treaty of 1908 have marked the boundary line wherever necessary in the intervals between the original monuments established by the said Joint Commission, appointed in 1872, in accordance with the agreement stated in the protocol of the final meeting, dated May 29, 1876, of the Joint Commission aforesaid, and as set forth in Article VI of the Treaty of 1908, by placing intermediate monuments on lines joining the original monuments, which have in each case the curvature of a parallel of 49° north latitude;

<sup>&</sup>lt;sup>1</sup> The geographic coordinates, latitude 49° 23′ 04″.49, longitude 95° 09′ 11″.61, used by the two Governments in defining the location of this point in the treaty of 1925, were obtained from an adjustment made in 1919 of triangulation executed by the International Boundary Commission, and are derived from the geographic positions of triangulation stations "States" and "Canada" as published in Appendix IV of the U. S. Coast and Geodetic Survey Report for 1911. The geographic position of this same point in terms of the North American datum of 1927, the datum on which all geographic positions of this section of the boundary line are based, is latitude 49° 23′ 04″.14, longitude 95° 09′ 11″.34.

TREATY OF 1925

And whereas the average distance between adjacent monuments as thus established or reestablished along the 49th parallel of north latitude from Lake of the Woods to the summit of the Rocky Mountains by the Commissioners acting under Article VI of the Treaty of 1908 is one and one-third miles and therefore the deviation of the curve of the 49th parallel from a straight or right line joining adjacent monuments is, for this average distance between monuments, only one-third of a foot, and in no case does the actual deviation exceed one and eighttenths feet;

And whereas it is impracticable to determine the course of a line having the curvature of a parallel of 49° north latitude on the ground between the adjacent monuments which have been established or reestablished by the Commissioners and the demarcation of the boundary would be more thoroughly effective if the line between adjacent monuments be defined as a straight or right line;

And whereas it is desirable that the boundary at any point between adjacent monuments may be conveniently ascertainable on the ground, the Contracting Parties, in order to complete and render thoroughly effective the demarcation of the boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains, hereby agree that the line heretofore referred to as the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains shall be defined as consisting of a series of right or straight lines joining adjacent monuments as now established or reestablished and as now laid down on charts by the Commissioners acting under Article VI of the Treaty of 1908, in lieu of the definition set forth in the agreement of the aforesaid Joint Commissioners, dated May 29, 1876, and quoted in Article VI of the said Treaty of 1908, that in the intervals between the monuments the line has the curvature of the parallel of 49° north latitude.

#### ARTICLE III

Whereas the Treaty concluded on May 21, 1910, between the United States and Great Britain, defined the international boundary line between the United States and the Dominion of Canada, from a point in Passamaquoddy Bay lying between Treat Island and Friar Head to the middle of Grand Manan Channel and provided that the location of the line so defined should be laid down and marked by the Commissioners appointed under the Treaty of April 11, 1908;

And whereas it has been found by the surveys executed pursuant to the said Treaty of May 21, 1910, that the terminus of the boundary line defined by said Treaty at the middle of Grand Manan Channel is less than three nautical miles distant both from the shore line of Grand Manan Island in the Dominion of Canada and from the shore line of the State of Maine in the United States, and that there is a small zone of waters of controvertible jurisdiction in Grand Manan Channel between said terminus and the High Seas;

The Contracting Parties, in order completely to define the boundary line between the United States and the Dominion of Canada in the Grand Manan Channel, hereby agree that an additional course shall be extended from the terminus of the boundary line defined by the said Treaty of May 21, 1910, south  $34^{\circ} 42'$  west, for a distance of two thousand three hundred eighty-three (2,383) meters, through the middle of Grand Manan Channel, to the High Seas.

The course so defined shall be located and marked by the Commissioners appointed under the Treaty of April 11, 1908, and shall be laid down by them on the chart or charts adopted in accordance with the provisions of Article I of the said Treaty, and a detailed account of the work done by the Commissioners in locating and marking said line, together with a description of the several monuments erected, shall be included in the report or reports prepared pursuant to Article I of the Treaty of April 11, 1908.

The course so defined and laid down shall be taken and deemed to be the boundary line between the United States and the Dominion of Canada in Grand Manan Channel from the terminus of the boundary line as defined by the Treaty of May 21, 1910, to the High Seas.

#### TREATY OF 1925

## ARTICLE IV

Whereas, pursuant to existing treaties between the United States and Great Britain, a survey and effective demarcation of the boundary line between the United States and the Dominion of Canada through the Great Lakes and the St. Lawrence River and through the Straits of Georgia, Haro, and Juan de Fuca from the 49th Parallel to the Pacific Ocean and between Alaska and the Dominion of Canada from the Arctic Ocean to Mount St. Elias have been made and the signed joint maps and reports in respect thereto have been filed with the two Governments;

And whereas a survey and effective demarcation of the boundary line between the United States and the Dominion of Canada from the Gulf of Georgia to Lake Superior and from the St. Lawrence River to the Atlantic Ocean and between Alaska and the Dominion of Canada from Mount St. Elias to Cape Muzon are nearing completion;

And whereas boundary monuments deteriorate and at times are destroyed or damaged; and boundary vistas become closed by the growth of timber;

And whereas changing conditions require from time to time that the boundary be marked more precisely and plainly by the establishment of additional monuments or the relocation of existing monuments;

The Contracting Parties, in order to provide for the maintenance of an effective boundary line between the United States and the Dominion of Canada and between Alaska and the Dominion of Canada, as established or to be established, and for the determination of the location of any point thereof, which may become necessary in the settlement of any question that may arise between the two Governments hereby agree that the Commissioners appointed under the provisions of the Treaty of April 11, 1908, are hereby jointly empowered and directed: to inspect the various sections of the boundary line between the United States and the Dominion of Canada and between Alaska and the Dominion of Canada at such times as they shall deem necessary; to repair all damaged monuments and buoys; to relocate and rebuild monuments which have been destroyed; to keep the boundary vistas open; to move boundary monuments to new sites and establish such additional monuments and buoys as they shall deem desirable; to maintain at all times an effective boundary line between the United States and the Dominion of Canada and between Alaska and the Dominion of Canada, as defined by the present Treaty and Treaties heretofore concluded, or hereafter to be concluded; and to determine the location of any point of the boundary line which may become necessary in the settlement of any question that may arise between the two Governments.

The said Commissioners shall submit to their respective Governments from time to time, at least once in every calendar year, a joint report containing a statement of the inspections made, the monuments and buoys repaired, relocated, rebuilt, moved, and established, and the mileage and location of vistas opened, and shall submit with their reports, plats and tables certified and signed by the Commissioners, giving the locations and geodetic positions of all monuments moved and all additional monuments established within the year, and such other information as may be necessary to keep the boundary maps and records accurately revised.

After the completion of the survey and demarcation of the boundary line between the United States and the Dominion of Canada from the Gulf of Georgia to Lake Superior and from the St. Lawrence River to the Atlantic Ocean, as provided for by the Treaty of April 11, 1908, the Commissioners appointed under the provisions of that Treaty shall continue to carry out the provisions of this Article, and, upon the death, resignation, or other disability of either of them, the Party on whose side the vacancy occurs shall appoint an Expert Geographer or Surveyor as Commissioner, who shall have the same powers and duties in respect to carrying out the provisions of this Article, as are conferred by this Article upon the Commissioner appointed under the provisions of the said Treaty of 1908.

The Contracting Parties further agree that each Government shall pay the salaries and expenses of its own Commissioner and his assistants, and that the expenses jointly incurred by the Commissioners in maintaining the demarcation of the boundary line in accordance with the provisions of this Article shall be borne equally by the two Governments.

# ARTICLE V

This Treaty shall be ratified by the Contracting Parties and the ratifications shall be exchanged in Washington or Ottawa as soon as practicable. The Treaty shall take effect on the date of the exchange of ratifications.

Upon the expiration of six years from the date of the exchange of ratifications of the present Treaty, or any time thereafter, Article IV may be terminated upon twelve months' written notice given by either Contracting Party to the other, and following such termination the Commissioners therein mentioned and their successors shall cease to perform the functions thereby prescribed.

In faith whereof, the respective Plenipotentiaries have signed this Treaty in duplicate and have hereunto affixed their seals.

Done at Washington the 24th day of February, A. D. 1925.

[SEAL] [SEAL] CHARLES EVANS HUGHES. ERNEST LAPOINTE.

# APPOINTMENTS OF THE COMMISSIONERS UNDER THE TREATY OF 1908

## MR. O. H. TITTMANN FOR THE UNITED STATES

#### THEODORE ROOSEVELT, PRESIDENT OF THE UNITED STATES OF AMERICA

## To all to whom these Presents shall come, Greeting:

Know Ye, that reposing special trust and confidence in the integrity and ability of Otto H. Tittmann, of Missouri, Superintendent of the United States Coast and Geodetic Survey, I do appoint him the expert Commissioner on the part of the United States for the purpose of more accurately defining and marking the international boundary line between the United States and the Dominion of Canada, under the provisions of Articles I, II, III, V, VI, VII, and VIII of the treaty between the United States and Great Britain, signed at Washington on April 11, 1908, and do authorize and empower him to execute and fulfill the duties of this commission with all the powers, privileges, and emoluments thereunto of right appertaining, during the pleasure of the President of the United States.

In testimony whereof, I have caused the Seal of the United States to be hereunto affixed. Given under my hand at the City of Washington this fifth day of June, in the year of our Lord one thousand nine hundred and eight, and of the Independence of the United States of America the one hundred and thirty-second.

THEODORE ROOSEVELT.

By the President: ELIHU ROOT, Secretary of State.

#### DR. W. F. KING FOR HIS BRITANNIC MAJESTY

#### P. C. 2181–M

#### CERTIFIED COPY OF A REPORT OF THE COMMITTEE OF THE PRIVY COUNCIL, APPROVED BY HIS EXCELLENCY THE GOVERNOR GENERAL ON THE 27TH JUNE, 1908

The Committee of the Privy Council have had under consideration a despatch, dated 10th June, 1908, from His Majesty's Ambassador to the United States, containing the information that the ratifications of the Treaty for the Delimitation of the International Boundary between the United States and Canada were exchanged on the 4th June, 1908.

The Minister of the Interior, to whom the despatch was referred, observes that the Treaty, for the purpose of the more complete definition and demarcation which it contemplates, divides the boundary line, from the Atlantic Ocean at the entrance to Passamaquoddy Bay, to the Pacific Ocean at the Strait of Fuca, into eight sections, and provides that for each section, with the exception of the fourth section, which includes the line through the St. Lawrence River and the Great Lakes, and which is to be dealt with by the existing International Waterways Commission, two expert geographers or surveyors shall be appointed, one by each Government, as Commissioners to accurately define and mark the line, with the understanding stated in Article 9, that the same persons shall be appointed Commissioners under the several sections, excepting the fourth section, unless either Government find it expedient for some reason which it may think sufficient, to appoint some other person to be Commissioner for any of the sections.

[SEAL]

The Minister, in accordance with the provisions above mentioned, recommends that Mr. William Frederick King, Dominion Topographical Surveyor, and Chief Astronomer of the Department of the Interior, be nominated for the position of His Majesty's Commissioner for all the sections of the line except the fourth.

The Committee concurring advise that your Excellency may be pleased to inform his Majesty's Secretary of State for the Colonies of the desire of your Excellency's Government in this regard.

All which is respectfully submitted for approval.

The Honourable

RODOLPHE BOUDREAU, Clerk of the Privy Council.

THE MINISTER OF THE INTERIOR.

# MR. E. C. BARNARD FOR THE UNITED STATES

WOODROW WILSON, PRESIDENT OF THE UNITED STATES OF AMERICA

# To all to whom these Presents shall come, Greeting:

Know Ye, that reposing special trust and confidence in the Integrity and Ability of Edward C. Barnard, of New York, I do appoint him the expert Commissioner on the part of the United States for the purpose of more accurately defining and marking the International boundary line between the United States and the Dominion of Canada, under the provisions of Articles I, II, III, V, VI, VII, and VIII of the treaty between the United States and Great Britain, signed at Washington on April 11, 1908, and do authorize and empower him to execute and fulfill the duties of this commission with all the powers, privileges and emoluments thereunto of right appertaining, during the pleasure of the President of the United States.

In testimony whereof, I have caused the Seal of the United States to be hereunto affixed. Given under my hand at the City of Washington this thirtieth day of April, in the year of our Lord one thousand nine hundred and fifteen, and of the Independence of the United States of America the one hundred and thirty-ninth.

GEORGE by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India, Etc., Etc.

### To all and singular to whom these Presents shall come, Greeting!

Whereas by a Treaty concluded at Washington on the 11th day of April, 1908, between our Royal Predecessor His Majesty King Edward VII and our Good Friends the United States of America, respecting the Demarcation of the International Boundary between the United States and the Dominion of Canada, it was in effect provided that Commissioners should be appointed on Our part and on that of Our said Good Friends, and that the Commissioners so appointed should define and mark the boundary line, with the exception of that portion of it extending from the 45th parallel of north latitude through the St. Lawrence River, the Great Lakes and connecting waterways to the mouth of the Pigeon River;

96030-31-3

Now Know Ye that We, reposing especial trust and confidence in the approved learning, wisdom and fidelity of Our Trusty and Well-beloved James Joseph McArthur, Esquire, Dominion Land Surveyor, have named and appointed, as We do by these Presents name and appoint him to be Our Commissioner for the purposes aforesaid and pursuant to the said Treaty, to meet the other Commissioner appointed or to be appointed in like manner by Our Good Friends the United States of America, to do and determine all such matters as are provided to be done by him under the said Treaty, in the manner therein provided.

In witness whereof We have signed these Presents with Our Royal Hand.

Given at Our Court of Saint James the Twenty-sixth day of February One thousand Nine Hundred and Seventeen in the Seventh year of Our Reign.

By His Majesty's Command:

ARTHUR JAMES BALFOUR.

# MR. E. LESTER JONES FOR THE UNITED STATES

WOODROW WILSON, PRESIDENT OF THE UNITED STATES OF AMERICA

#### To all to whom these Presents shall come, Greeting:

Know Ye, that reposing special trust and confidence in the Integrity and Ability of E. Lester Jones, of Virginia, I do appoint him the expert Commissioner on the part of the United States for the purpose of more accurately defining and marking the International boundary line between the United States and the Dominion of Canada, under the provisions of Articles I, II, III, V, VI, VII, and VIII of the treaty between the United States and Great Britain, signed at Washington on April 11, 1908, and do authorize and empower him to execute and fulfill the duties of this commission with all the powers, privileges and emoluments thereunto of right appertaining, during the pleasure of the President of the United States.

In testimony whereof, I have caused the Seal of the United States to be hereunto affixed. Given under my hand, in the District of Columbia, this twenty-eighth day of February, in the year of our Lord one thousand nine hundred and twenty-one, and of the Independence of the United States of America the one hundred and forty-fifth.

(Sgd.) GEORGE R. I.

GEORGE, by the Grace of God, of Great Britain, Ireland and the British Dominions beyond the Seas King, Defender of the Faith, Emperor of India, Etc., Etc., Etc.

#### To all and singular to whom these Presents shall come, Greeting!

Whereas by Article VI of a Convention concluded at Washington on the 24th day of January 1903 between Our Royal Predecessor His Majesty King Edward VII and Our Good Friends the United States of America, respecting the adjustment of the Boundary between the Dominion of Canada and the Territory of Alaska, it was in effect provided that Commissioners should be appointed on Our part and on that of Our said Good Friends, for the purpose of laying down the boundary line in conformity with the decision of the Tribunal constituted under the terms of Article I of the said Convention;

And whereas by a Treaty concluded at Washington on the 11th day of April 1908 between Our said Royal Predecessor and Our said Good Friends, respecting the Demarcation of the International Boundary between the United States and the Dominion of Canada, it was in effect provided that Commissioners should be appointed on Our part and on that of Our said Good Friends, to define and mark the boundary line, with the exception of that portion of it extending from the 45th parallel of north latitude through the Saint Lawrence River, the Great Lakes and connecting waterways to the mouth of the Pigeon River;

Now know ye that We, reposing especial Trust and Confidence in the approved Learning, Wisdom and Fidelity of Our Trusty and Well-beloved Noel John Ogilvie, Esquire, Dominion Land Surveyor, Member of the Engineering Institute of Canada, Member of the American Society of Civil Engineers, the Director of the Geodetic Survey of Canada, have named and appointed, as We do by these Presents name and appoint him to be Our Commissioner for the purposes aforesaid and pursuant to the said Convention and Treaty, to meet the other Commissioners appointed or to be appointed in like manner by Our Good Friends the United States of America, and to do and determine all such matters as are provided to be done by him under the said Convention and Treaty, in the manner therein provided, this appointment to be effective as and from the 14th day of May of this year.

In witness whereof We have signed these Presents with Our Royal Hand.

Given at Our Court of Saint James the tenth day of June in the Year of Our Lord One Thousand Nine Hundred and Thirty-one and in the Twenty-second Year of Our Reign.

# RESERVATION OF LANDS ALONG THE INTERNATIONAL BOUNDARY

#### PROCLAMATIONS BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

#### (No. 810)

Whereas, the customs and immigration laws of the United States can be better enforced and the public welfare thereby better advanced when the Federal Government has complete control of the use and occupation of lands abutting on international boundary lines;

Now, therefore, I, Theodore Roosevelt, President of the United States, do hereby proclaim and make known that all unpatented public lands of the United States, lying within sixty feet of the boundary line between the United States and the Dominion of Canada, are hereby declared to be, and are set apart as a public reservation, and shall hereafter be subject only to such rights as have been heretofore legally acquired under settlements, entries, reservations, or other forms of appropriation, and are now existing, but shall not be subject at any time to any other claim, use, or occupation, except for public highways; and any patent issued for any legal subdivision affected by this reservation under any claim hereafter initiated, shall contain a recital that it is issued subject to this proclamation.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this 15th day of June, in the year of our Lord one thousand nine hundred and eight, and of the Independence of the United States the one hundred and thirty-second.

THEODORE ROOSEVELT

[SEAL]

By the President: ELIHU ROOT,

Secretary of State.

#### (No. 1196)

Whereas, the customs and immigration laws of the United States can be better enforced and the public welfare thereby advanced by the retention in the Federal Government of complete control of the use and occupation of lands abutting on International Boundary Lines;

Now, therefore, I, William Howard Taft, President of the United States, do hereby declare, proclaim, and make known that there are hereby reserved from entry, settlement, or other . form of appropriation and disposition under the public-land laws, and set apart as a public reservation, all public lands lying within sixty feet of the boundary line between the United States and the Dominion of Canada.

Excepting from the force and effect of this proclamation all lands which were prior to June fifteenth, nineteen hundred and eight, embraced in any legal entry or covered by any lawful filing, selection, or right of way duly of record in the proper United States land office or upon which any valid settlement had been made pursuant to law, the statutory period within which to make or complete entry or filing of record had not expired, and which has been or may be perfected as required by law. Any claims lawfully initiated between June fifteenth, nineteen hundred and eight, and the date hereof, lawfully maintained and perfected, may be patented subject to the reservation prescribed in proclamation of the President dated June fifteenth, nineteen hundred and eight.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this third day of May, in the year of our Lord one thousand nine hundred and twelve, and of the Independence of the United States the one hundred and thirty-sixth.

WM. H. TAFT

By the President: HUNTINGTON WILSON,

Acting Secretary of State.

#### EXECUTIVE ORDER

(No. 3209)

It is hereby ordered that Lot 1 Sec. 17, Lots 1 and 2 Sec. 18, Lots 1 and 2 Sec. 20, Lots 1 and 2 Sec. 21, Lot 1 Sec. 22, Lot 1 Sec. 27, Lots 1, 2, 5, 6 and 7 Sec. 28, the reef in Sec. 17 and the reef in Sec. 28, T. 168 N., R. 33 W., 5th P. M., Minnesota, containing 72.78 acres, be and the same are hereby temporarily withdrawn from settlement, entry, sale or other forms of disposal and reserved pending the establishment of the International Boundary Line through the Lake of the Woods, between the United States and Canada.

WOODROW WILSON

THE WHITE HOUSE 3 January, 1920.

It will be noted from the above proclamations that no reservation exists along the international boundary in any State or portion thereof in the United States where public lands were not available for that purpose on June 15, 1908.

Action Taken by the Department of Lands and Forests of the Province of Ontario

The Province of Ontario through the provincial Department of Lands and Forests in 1925 reserved from sale or disposal all ungranted crown lands lying within 66 feet of the three portions of the international boundary which extend, respectively, from Cypress Lake to Swamp Lake, from North Lake to South Lake, and from Watap Lake to Mountain Lake.

# AGREEMENT OF THE COMMISSIONERS AS TO THE MANNER IN WHICH THE PROVISIONS OF ARTICLE V OF THE TREATY OF 1908 AND ARTICLE I OF THE TREATY OF 1925 SHOULD BE CARRIED OUT

At a meeting of the commissioners held in Ottawa on December 28, 1908, the appointments of the commissioners under the treaty of April 11, 1908, were presented and found to be in due and proper form. At this and subsequent conferences of the commissioners it was agreed that the provisions of Article V of the treaty of 1908 and Article I of the treaty of 1925 should be carried out in the following manner:

I. That the boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior, when reestablished, should consist throughout of connecting straight courses, conforming as closely as practicable to the course of the curved line shown on the original boundary maps prepared in 1822–1824 under the treaty of Ghent. That the line as thus reestablished should be referred to durable reference monuments on the shores where the line lies in the boundary waterways, and should be marked by durable boundary monuments where the line crosses the three portages.

II. That, owing to the fact that the part of the boundary in Lake of the Woods running from a point near the mouth of Rainy River to Oak Island, if laid down as defined in the journal of Barclay and Porter, the commissioners appointed under Article VII of the treaty of 1814, as being "a direct line to a point in said lake, 100 yards east of the most eastern point of Island No. 1" (Oak Island), would intersect four islands, this part of the line should be modified to such extent as might be necessary to make it conform to the terms of Article V of the treaty of 1908, which stipulates that "the boundary, so far as practicable, shall be a water line and shall not intersect islands \* \* \*."

III. That in so far as practicable the boundary through Rainy River, except where the line passes islands, should be reestablished midway between the banks of the river.

IV. That the monuments marking the land boundary on the portages should be aluminum-bronze posts set in concrete bases extending below the frost line, and that the boundary reference monuments along the waterways through which the boundary passes should be durable metal marks set in solid rock or in blocks of concrete placed flush with the surface of the ground and extending below the frost line. That each monument and reference monument should bear a suitable number, cut or stamped in the metal, to identify it on the ground, in the final reports, and on the boundary maps.

V. That, for the purpose of accurately defining, locating, and describing the boundary as laid down by the commissioners, all boundary monuments and boundary reference monuments should be located geodetically by triangulation or by accurate traverses controlled by first-order triangulation or traverse on the North American datum of 1927, and that a list of their geographic positions, certified by the commissioners in their joint report, should constitute the true description and

definition of the international boundary as surveyed, marked, and reestablished by them in accordance with Article V of the treaty of 1908 and Article I of the treaty of 1925.

VI. That, in order to provide the first-order geodetic control necessary for the above-mentioned purposes, the commissioners would use their best efforts to have the Geodetic Survey of Canada and the United States Coast and Geodetic Survey extend a scheme of first-order triangulation and traverse from Lake Superior to Lake of the Woods. (This cooperative work was entered into by these two governmental agencies and was completed in 1924.)

VII. That the vertical control for the survey and the topographic maps of the boundary should be based upon a line of first-order levels to be run through the region by the Geodetic Survey of Canada. (The Geodetic Survey of Canada ran this line of first-order levels in 1913 from Port Arthur, Ontario, to Emerson, Manitoba, via Fort Frances, Ontario, and Warroad, Minn., with a spur line to the boundary at North Lake, Ontario.)

VIII. That the "accurate modern charts" of the boundary, specified in Article V of the treaty of 1908, should consist of a series of 36 topographic maps to be prepared from surveys made under the direction of the commissioners, showing thereon the course of the boundary, the location of the boundary monuments and reference monuments, and the topography of the terrain adjacent to the line. That the scales of these maps should be as follows: Of the boundary through Lake of the Woods, 1: 62,500; of the boundary from Lake of the Woods to the head of Pigeon River, 1: 24,000; and of the boundary through Pigeon River, 1: 6,000. That the contour interval for the Pigeon River maps should be 5 feet and for the remainder of the boundary maps, 10 feet.

IX. That the maps of the boundary should be engraved on copper plates and printed from lithographic stones using the conventional colors, black, brown, blue, and green. That after the completion of the printing and after the signing of the official maps by the commissioners, the engraved copper plates should be placed in safe storage and later should be equally divided between the two Governments.

X. That the commissioners' joint report to the two Governments on the reestablishment of this section of the international boundary line, required by Article V of the treaty of 1908, should be printed and copies thereof should be distributed to other Government agencies and to depository libraries of the two countries.

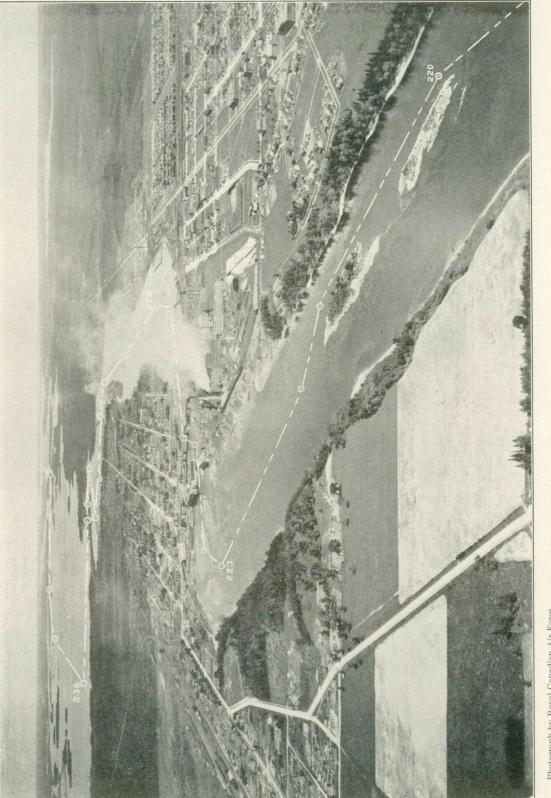

# RETRACEMENT OF THE BOUNDARY LINE

The work of reestablishing the boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior, as provided for under the treaties of 1908 and 1925, included the determination of the location of the line as adopted under the treaty of 1842 and as shown on the maps prepared in 1822, 1823, and 1824 by Commissioners Barclay and Porter, acting under Article VII of the treaty of Ghent, 1814. The maps were crudely drawn on a scale of 1 inch to 1 mile, and showed little more than the boundary line and the adjacent shore lines of the boundary lakes and rivers. Although these maps were inaccurate, they were, in general, the sole means of determining the position of the boundary line as agreed to under the treaty of 1842. Other than the maps, no records or notes of the original survey of the boundary waterways could be found, except the journal of the commissioners,<sup>1</sup> in which the location of parts of the line was described relative to certain islands.

The work of retracing the line consisted first of making an accurately controlled topographic survey of the several lakes and rivers constituting the system of boundary waterways, and from these surveys preparing a modern topographic map, showing in their correct positions all shore lines, islands, and other topographic features. On these maps there was then drawn the tentative boundary line, consisting of a series of connecting straight-line courses, which were made to conform as closely as possible to the curved boundary shown on the old maps of 1822–1824. These modern maps were then carefully checked with the old maps in order to make sure that the numerous islands immediately adjacent to the boundary line as shown on the old maps had been correctly identified on the modern maps, and that the boundary line had been laid down in the correct relation thereto. This series of connecting straight lines, as thus laid down and checked, was then accepted by the commissioners as the true boundary. The geographic positions of the turning points were then accurately determined by triangulation.

The boundary line through Pigeon River, Rainy River, and the small waterways that connect the boundary lakes was represented on the original boundary maps by a line drawn, in general, midway between the banks, and accordingly the line through these streams was laid down by the commissioners as a series of straight lines as nearly midway between banks as practicable, always observing the previously determined nationality of the islands and adhering to any deviation shown on the original boundary maps. The commissioners decided that in the narrowest of these waterways the positions of the turning points of the line, as laid down by them, should be verified and checked in the field to make sure that the line properly divided the boundary waters. This was done in five rivers, namely, Loon, Bottle, Basswood, Granite, and Pine Rivers, and in other smaller boundary streams, and also in the narrow places in the lakes along the part of the boundary line from Namakan Lake to the head of Pigeon River.

Looking eastward along the international boundary at Fort Frances, Ontario, and International Falls, Minn.; Rainy River in the foreground, Rainy Looking eastward along the international tents of the distance of the second seco

At the three places on the boundary where there are no waterways—at Swamp Portage, Height-of-Land Portage, and Watap Portage—the line was laid down and marked to follow approximately the portage trails. The negotiators of the treaty of 1842 had shown the line as following the trail across Height-of-Land Portage, between North and South Lakes, and across Swamp Portage, between Swamp and Cypress Lakes; but at Watap Portage, between Watap and Mountain Lakes, no location of the line had been indicated by them. The precedent, which they had established in the two cases, of making the line follow the portage trails was therefore adopted by the commissioners acting under the treaty of 1908 as applicable to the location of the line on Watap Portage.

The boundary line through Saganaga Lake, as adopted under the treaty of 1842, was shown on two maps, on different scales, each of which covers the entire lake and bears the signatures of Commissioners Webster and Ashburton certifying that each is a "map of boundary agreed to by treaty August 9, 1842." The boundary lines as shown on the two maps are not, however, identical. On the larger-scale map the shore lines correspond closely to the shore lines on the modern maps prepared under the treaty of 1908, while on the smaller-scale map the shore lines are grossly inaccurate and the boundary line shown thereon is impracticable. The commissioners therefore decided to accept the line shown on the larger-scale map.

The boundary line in Lac LaCroix as drawn by Webster and Ashburton under the treaty of 1842 terminates at the eastern end of the lake at the narrow neck of land between Lac LaCroix and Iron Lake, leaving a short gap between the two lakes where no line is shown. In closing this gap the commissioners under the treaty of 1908 followed the channel of Bottle River, the waterway connecting Lac LaCroix and Iron Lake. There was a shorter course across the narrow neck of land between these lakes, but this course was prohibited by the stipulation of Article V of the treaty of 1908 that "the boundary, so far as practicable, shall be a water line."

Through the southern part of Lake of the Woods a 30-mile portion of the boundary line was defined by the commissioners under Article VII of the treaty of Ghent in their journal as a straight course running from the open water of the lake near the mouth of Rainy River "by a direct line to a point in said lake, 100 yards east of the most eastern point of Island No. 1," now known as Oak Island. Upon the completion of the modern survey of Lake of the Woods, the above-described course was found to intersect four islands. This apparent departure from a water boundary, on the part of the commissioners under the treaty of Ghent, is explained by the fact that not all of the islands in this part of Lake of the Woods were shown on the original maps, and such islands as were sketched thereon were very inaccurately located. The commissioners accordingly agreed to lay down this portion of the line as follows: Beginning in the channel east of Sable Islands, near the mouth of Rainy River, the line of the treaty of 1842 was accepted without change northward to its intersection with the channel used by the boats of the fishing companies about 2 miles south of Sugar Point; thence a series of seven connecting straight lines was laid down following the channel used by the larger boats to the point described in the journal of the commissioners under the treaty of Ghent as being 100 yards east of the most eastern point of "Island No. 1," or Oak Island.

The retracement of the boundary in the northern part of Northwest Angle Inlet of Lake of the Woods was based chiefly upon a careful hydrographic survey <sup>2</sup> which showed that the boundary channel was crossed five times by the line which runs due south from the Northwesternmost Point of Lake of the Woods to the fortyninth parallel, part of the international line which extends from Lake of the Woods to the summit of the Rocky Mountains. Thus the two boundaries, the channel boundary and the meridian line, inclosed two small areas of United States waters in Lake of the Woods, comprising a total area of two and one-half acres, entirely surrounded by Canadian waters.<sup>3</sup>

Upon the recommendation of the commissioners, the parts of the north-andsouth line and of the line in the channel lying northward of their most southern intersection were eliminated from the international boundary by the treaty signed at Washington, February 24, 1925, Article I of which reads in part as follows:

"The aforesaid most southerly point shall be located and monumented by the Commissioners appointed under the said Treaty of April 11, 1908, and shall be marked by them on the chart or charts prepared in accordance with the provisions of Articles V and VI of the said Treaty, and a detailed account of the work done by the Commissioners in locating said point, together with a description of the character and location of the several monuments erected, shall be included in the report or reports prepared pursuant to the said Articles.

"The point so defined and monumented shall be taken and deemed to be the terminus of the boundary line heretofore referred to as the international boundary line between the United States and the Dominion of Canada, from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of Lake of the Woods and the initial point of the boundary line heretofore referred to as the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains."

<sup>2</sup> See details, p. 110, and map, p. 108. <sup>3</sup> Treaty of 1925. See p. 12.

The first field work pertaining to the final survey and demarcation of the section of the international boundary line from Lake of the Woods to Lake Superior was done several years before the negotiation of the treaty of 1908. During the summer of 1896 a preliminary examination of part of this section of the boundary was made for Canada by an engineer under the direction of Dr. W. F. King, then chief astronomer of the Dominion Government. This examination covered the portion of the boundary from the rapids on Pigeon River, just below South Fowl Lake, to Kettle Falls at the eastern end of Rainy Lake, and it consisted largely of making a comparison of the shore lines of the boundary waterways as shown on the old boundary maps, prepared under Article VII of the treaty of Ghent, with the corresponding features on the ground. Several years later the report of this examination for the Canadian Government was carefully studied by engineers of the United States who had been assigned to the investigation of boundary matters preliminary to the drafting of a general boundary treaty. The results of this work by the two Governments were later used in framing Article V of the treaty of 1908, which provided for the final survey and demarcation of this part of the line.

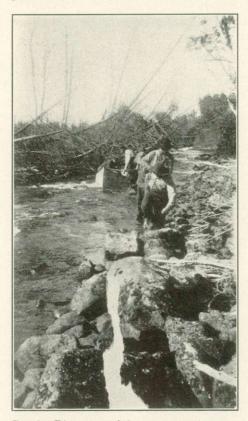

The field work of reestablishing the boundary under the provisions of the treaty of 1908 was begun in September of that year by a small United States party at the eastern end of the line at Lake Superior. Until 1912 this party, which continued westward from year to year, was the only organization operating on this section of the boundary. In 1912 activities were increased by the addition of a Canadian party and another United States party which started work eastward from the Northwesternmost Point of Lake of the Woods. Both Governments were then represented by fairly large organizations until the close of the season of 1916. Thereafter the work was done principally by United States parties.

At the beginning of the work in 1908 the commissioners were of the opinion that the development of a scheme of triangulation control and a survey of the shore lines of the boundary waterways and of the islands within these waters would furnish sufficient information for preparing the "accurate modern charts" required by the treaty. Maps of this kind—that is, without contours—were then being prepared by the International Waterways Commission under Article IV of the treaty of 1908<sup>1</sup> as the official maps of the boundary through the St. Lawrence River and the Great Lakes. Consequently the commissioners' instructions to the field parties from 1908 to 1912 did not include the making of a complete topographic survey of the terrain adjacent to the boundary waterways nor for running levels to determine the elevations necessary for contoured maps.

<sup>&</sup>lt;sup>1</sup> Article IV of the treaty of 1908 provided specifically that the survey and demarcation of the boundary through the Great Lakes and the St. Lawrence River was to be done by the International Waterways Commission.

In 1912 questions or matters of difference regarding the use and the regulation of the waters of Lake of the Woods and its watershed were submitted by the Governments of the United States and Canada to the International Joint Commission for examination. Thereupon the joint commission began an exhaustive field investigation of this region. This investigation emphasized the importance of these boundary waters and directed attention to the need for maps that showed not only the shore lines but also the relief of the terrain adjacent to the waterways.

In view of these developments the commissioners in 1913 instructed the field parties to include in their work in this region not only the mapping of the shore

Granite River, one of the narrow waterways through which the boundary line was located in the field

lines but also the contouring of the terrain adjacent to the boundary waterways and the determination of the elevations of the water surfaces of the various lakes above sea-level datum. This decision for a complete topographic survey of the boundary waterways necessitated at a later period some additional work along that part of the boundary which had been surveyed prior to 1913 in the years 1908 to 1912. The additional contour mapping was done by the parties who went into that region to set the boundary reference monuments in 1916 and 1917.

The commissioners had agreed that the boundary triangulation should be tied wherever practicable to a continental scheme of first-order geodetic control in order that the geographic positions of all boundary monuments, reference monuments, and the turning points of the boundary line might be determined on the latest geodetic datum common to the two countries. Accordingly by cooperative arrangements with the United States Coast and Geodetic Survey and the Geodetic Survey of Canada a scheme of first-order control for this purpose, consisting of first-order triangulation and traverse, was run jointly by

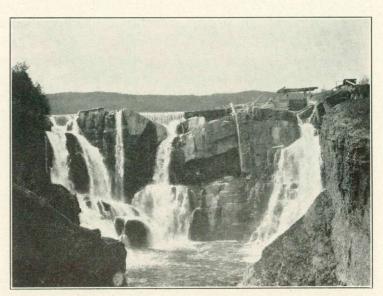

these two governmental agencies from Lake Superior to Lake of the Woods and thence westward to the ninety-eighth meridian arc of triangulation at the Red River. This work was completed in 1924, and shortly thereafter the necessary boundary field work was done to complete the remaining ties between this firstorder scheme and the boundary triangulation.

Also, it was deemed necessary, after the major portion of the field work had been completed and the topographic maps had been made, that the course and location of the boundary line through some of the very narrow waterways should be rechecked in the field in order to make certain that the line as laid down by the commissioners properly divided the boundary waters. Field work of this character, together with the numbering of the boundary monuments and reference monuments and the making of additional triangulation ties, was done by comparatively small parties from time to time, as compatible with the progress of the completion of the field work on other sections of the boundary line, during the field seasons of 1918, 1921, 1922, 1925, and 1926.

A detailed account of the field operations of the two sections of the commission is set forth on the following pages.

# SEASON OF 1908—PIGEON RIVER

Immediately following the conclusion of the boundary treaty of 1908 and the

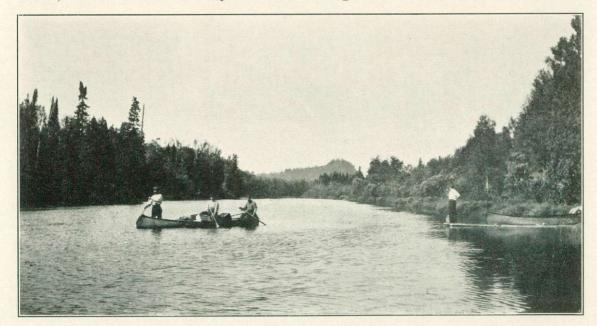

"High Falls" on Pigeon River

appointment of the commissioners thereunder, plans were made for beginning as soon as possible the field work of the boundary survey and demarcation which the treaty provided for.

The first work on the section of the boundary covered by this report was begun in September, 1908, by a triangulation party of the United States section of the commission at Victoria Island in Lake Superior, near the mouth of Pigeon River. This party consisted of a geodetic engineer and four hands. They chartered a small steam launch, *The Pickett*, and established camp on Victoria Island.

A scheme of major triangulation was started from stations "Mt. Josephine," "Knob," and "Northwest Royal" of the triangulation of the United States Lake

Pigeon River above Partridge Falls

Survey on Lake Superior, and from a line of this scheme, minor triangulation was extended into Pigeon Bay and thence along the boundary up Pigeon River. This triangulation was designed to furnish the geodetic control for the determination of the geographic positions of the boundary reference monuments to be set along Pigeon River and of the turning points of the boundary line to be laid down therein by the commissioners.

Owing to the short time available for work during the season of 1908, the party's operations were necessarily restricted to bringing the triangulation into Pigeon River preparatory to the more general work of the survey next season. By the time they had carried the triangulation through five quadrilaterals as far up Pigeon River as the first falls, which point was reached on November 17, weather conditions became so unfavorable that the party discontinued work until the following summer.

The above-described work in 1908 was under the direction of W. B. Fairfield, assistant, United States Coast and Geodetic Survey.

#### SEASON OF 1909—PIGEON RIVER

Owing to the fact that funds for work on Pigeon River during the field season of 1909 were not available until July 1, the beginning of the fiscal year, operations

"The Cascades" on Pigeon River

of the United States party were not resumed until late that month. At that time Mr. W. B. Fairfield, assistant, United States Coast and Geodetic Survey, organized a field party at Port Arthur, Ontario, and shortly thereafter established a survey camp at the mouth of Pigeon River.

As Pigeon River is narrow and crooked and its banks heavily wooded, the chief of party decided to control the survey of the river by a carefully

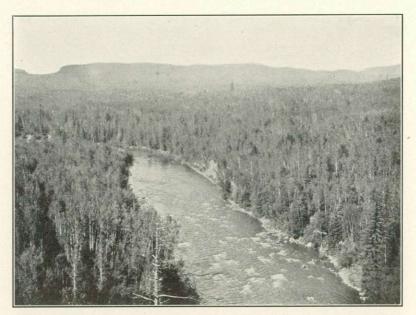

run stadia traverse which would later be connected at intervals with the general scheme of boundary triangulation. Accordingly, such a traverse was begun at the last triangulation station of the previous season's work, near the dam at High Falls, and was run upstream along the banks of the river, the stations frequently being alternated from bank to bank as conditions demanded.

The stadia methods and instruments employed in running the traverse were such as to secure a relatively high degree of accuracy for stadia work. The angles of the traverse were measured with a 7-inch Berger theodolite by the repetition method used on minor triangulation. The distances were measured by stadia, the length of each line being carefully read both forward and backward. The stadia rods were carefully graduated by the United States Coast and Geodetic Survey to agree with the stadia interval of the theodolite, and the stadia factor of each rod was determined in the field under conditions similar to those encountered in running the traverse. Vertical angles were carried along the traverse to provide the necessary differences of elevation for reducing the observed lengths of the lines to the horizontal.

The mapping of the shore line and islands of Pigeon River was done by plane table and stadia on a field scale of 1: 5,000. In addition to the shore line, the map showed the location of the rapids and falls in the river and the line of the deep-

water channel. No contouring of the terrain along the river was done at this time.<sup>2</sup>

The transportation of supplies and equipment for the survey work on Pigeon River was by teams and wagons over logging roads of the Pigeon River Lumber Co. The supplies for the party were purchased from time to time in Port Arthur, Ontario, and shipped by boat to the mouth of Pigeon River and thence delivered to the survey

Pigeon River looking upstream from boundary reference monument 1338

camp by the Pigeon River Lumber Co. Because of swift water and numerous falls, water transportation on Pigeon River was for the most part impracticable.

The party remained in the field until the survey of Pigeon River was completed. South Fowl Lake, the head of the river, was reached about November 15, and as weather conditions were unfavorable for continuing work on the lake the camp outfit was hauled to the mouth of the river and stored for the winter at the main camp of the Pigeon River Lumber Co.

The personnel of the party during the season of 1909 was as follows: Chief of party, W. B. Fairfield; assistant, Rudolph Luscher; and eight hands.

# SEASON OF 1910—SOUTH FOWL LAKE, NORTH FOWL, MOOSE, LILY, MOUNTAIN, WATAP, AND ROSE LAKES

The United States party for the season of 1910 assembled at Port Arthur, Ontario, and on June 27 went to the mouth of Pigeon River. Upon arrival at the main

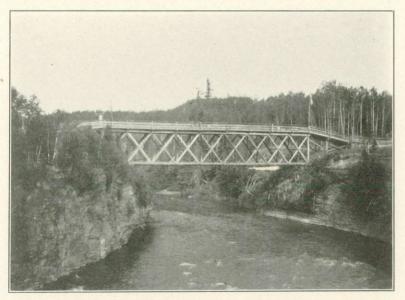

96030 - 31 - 4.

<sup>&</sup>lt;sup>2</sup> The need for complete topographic maps of the boundary through this region, including the contouring of the terrain adjacent to the boundary line, was not apparent until several years later. See preliminary statement, p. 29.

camp of the Pigeon River Lumber Co., they learned that forest fires were raging along the upper part of the river and in the vicinity of South Fowl Lake, which was to be the starting point of the season's work. As it was unwise to risk the survey outfit in the burned district before the fires were extinguished, the party remained at the mouth of Pigeon River until July 11.

By that time several showers had occurred, which partially quenched the fires, so that shortly thereafter the party was able to reach the head of Pigeon River, where they established camp on a burned-over island in South Fowl Lake. Fires were still burning in the woods across the lake to the west and north.

Work was immediately begun on a scheme of triangulation to control the survey of the lakes westward from the head of Pigeon River. A line of the traverse, run in 1909, was used as a temporary base, and an azimuth was observed at station "Abel." Most of the triangulation stations were on prominent points of elevation

from 200 to 400 feet above the lakes and some distance back from the shore lines. Connected to this triangulation were numerous local subsidiary schemes of triangulation for the detailed control of the mapping of the shore lines of the lakes and for furnishing the geographic positions of the boundary reference monuments and the turning points of the boundary line. The triangulation that season was extended as far westward as Rose Lake.

International bridge on Scott Highway at crossing of Pigeon River, 1909

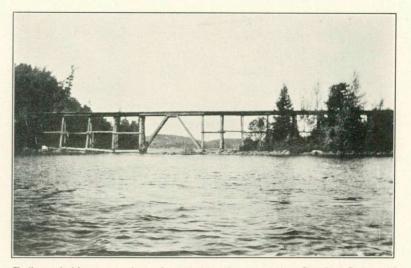

The topographic work consisted of mapping the shore lines of the lakes on a scale of 1: 20,000 and the narrow boundary waterways on a scale of 1: 5,000 and of making a complete topographic map of Watap Portage, between Mountain Lake and Watap Lake, on a scale of 1: 5,000, with 5-foot contours. Elevations necessary for the survey were carried forward by vertical angles measured at the triangulation stations.

Considerable line cutting was done during the season. Many lines of sight had to be cleared for the triangulation work, and a 20-foot vista was cleared along the boundary line on Watap Portage.

The party remained in the field until the beginning of winter for the purpose of measuring a base line on the ice when the lakes had frozen. On account of increasing bad weather the party on October 21 laid aside their tents and during the remainder of the season occupied a logging camp of the Bishop Lumber Co. on Rose Lake.

The party continued work on the triangulation until about the 1st of December, when the ice was sufficiently safe for measuring the base line. In the meantime considerable snow had fallen, and on December 2, when the base was measured, it

was necessary to clear the proposed line across the ice with a snow plow. Immediately this was done, a 1,334-meter base was measured both forward and backward from boundary reference monument 1,193 to triangulation station "Arthur." This work was done with a 50-meter invar tape supported throughout its length flat on the ice, under a tension of 15 kilograms and at a mean temperature of 16° Fahrenheit.

Railway bridge across boundary waterway connecting Gunflint Lake and Magnetic Lake, 1911

On December 3 all the outfit, except the canoes which had been stored for the winter at the Bishop Lumber Camp, was moved on sleds over a "tote" road to North Lake siding, a station on the Canadian National Railway, and there left in charge of the United States customs officer until the following season.

The personnel of the party in 1910 was as follows: Chief of party, W. B. Fairfield; assistant, Kai Hendriksen; and eight hands.

# SEASON OF 1911—ROSE LAKE, RAT, SOUTH, NORTH, GUNFLINT, MAGNETIC, PINE, AND ROUND LAKES

The United States party for 1911 began field work at Rose Lake on June 11. The triangulation, which had been begun at South Fowl Lake in 1910, was extended from Rose Lake westward along the boundary waterways as far as stations "Carlos" and "Droit" near Round Lake. To strengthen the scheme, a base line 973 meters in length was measured along the Port Arthur, Duluth & Western Railway on the north shore of Gunflint Lake. Also, azimuth observations were made at station

One of the wider parts of Pine River, the boundary stream connecting Magnetic Lake and Pine Lake

"Dram" on Height-of-Land Portage and at station "Cook" at the west end of Gunflint Lake.

The topographic mapping was similar in all respects to that done during the previous season. The shore lines of the lakes were mapped and a complete topographic map was made along the boundary on

Height-of-Land Portage, between North Lake and South Lake. Elevations for the topographic work were carried forward by vertical angles measured at the triangulation stations.

Transportation was entirely by canoes, which were used by the surveyors going to and from work and also for moving camp. The type of boat that best met these requirements, especially in rough weather, was a 20-foot freight canoe of 54 inches beam.

By the time the party reached Round Lake, which was late in October, ice was beginning to form on the smaller lakes, making canoe transportation increasingly difficult. The party therefore discontinued work at Round Lake and returned to North Lake, where the outfit was placed in storage for the winter.

The personnel of the party during the season of 1911 was as follows: Chief of party, W. B. Fairfield; assistant, J. J. Phelan; and 12 hands.

# SEASON OF 1912—ROUND LAKE, MARABOEUF, SAGANAGA, SWAMP, CYPRESS, AND KNIFE LAKES, AND LAKE OF THE WOODS

Up to this time the only field party engaged on this section of the boundary was the United States party whose operations have just been described. In 1912, however, field activities were increased by the addition of a Canadian party and a United States party which since 1908 had been engaged on the survey of the boundary along the forty-ninth parallel. These parties started work on Lake of the Woods. The Canadian party began work in May at Northwest Angle Inlet, but the United States party, whose principal work in 1912 was the survey of the forty-ninth parallel boundary from Red River to Lake of the Woods, did not arrive at Lake of the Woods until shortly after the middle of September. These two parties conducted operations concurrently with the work of the other United States party, which continued westward from Round Lake, where they had left off in 1911.

#### CANADIAN PARTY ON LAKE OF THE WOODS

The Canadian party assembled at Kenora, Ontario, and on May 15 left for the Northwesternmost Point of Lake of the Woods. They reached Buckete Island at the entrance to Northwest Angle Inlet early on the following day, and, proceeding up the inlet, established camp on a tributary creek about 1 mile east of the meridian boundary line. Their transportation equipment consisted of two motor boats 36 and 40 feet in length and several small boats.

The country in which the party began work is low and boggy. Northwest Angle Inlet is nearly covered with floating bog or muskeg, which consists of a mat of grass roots, moss, and mud. It also contains a considerable growth of reeds and wild rice. Through this muskeg a clear channel meanders, about 60 feet wide and from 6 to 10 feet deep.

The party made a preliminary examination of the inlet from Boucher Island to the vicinity of the Northwesternmost Point, during the course of which they made a search for the cribwork monument (see p. 110) which had been erected in 1824 by David Thompson, astronomer and surveyor for the British section of the commission under the treaty of Ghent, to mark an alternative location for the Northwesternmost Point, and which had been selected in 1825 by Dr. J. L. Tiarks, astronomer for the British Government, as being the Northwesternmost Point of Lake of the Woods.<sup>3</sup> No trace of this monument could be found, which was not surprising, as but few vestiges of it remained in 1872 when its submerged site was recovered only after a long search by engineers of the boundary commission of 1872–1876. The location of this reference monument was not, however, essential to the determination of the position of the Northwesternmost Point, for the reason that the exact distance of this point from monument 925, as measured along the meridian boundary, had been recorded in the report of the survey of the boundary from Lake of the Woods to the Rocky Mountains made in 1872–1876.

A small scheme of triangulation was begun at the meridian boundary near monument 925 and carried along the shores of the inlet and eastward into Lake of the Woods as far as Oak Island. Here the triangulation was expanded into a larger scheme which was later to become a part of the major triangulation of Lake of the Woods.

Monuments were set along the shores of Northwest Angle Inlet and on islands in Lake of the Woods to reference the boundary as far eastward as Oak Island. Each of these monuments consisted of a block of concrete 2 feet square and 3 feet deep, in which was set an iron bar 3 feet long and 2 by 2 inches in cross section with a pyramidal top to indicate the exact point of reference. These monuments were all tied in to the triangulation, many of them being set at triangulation stations.

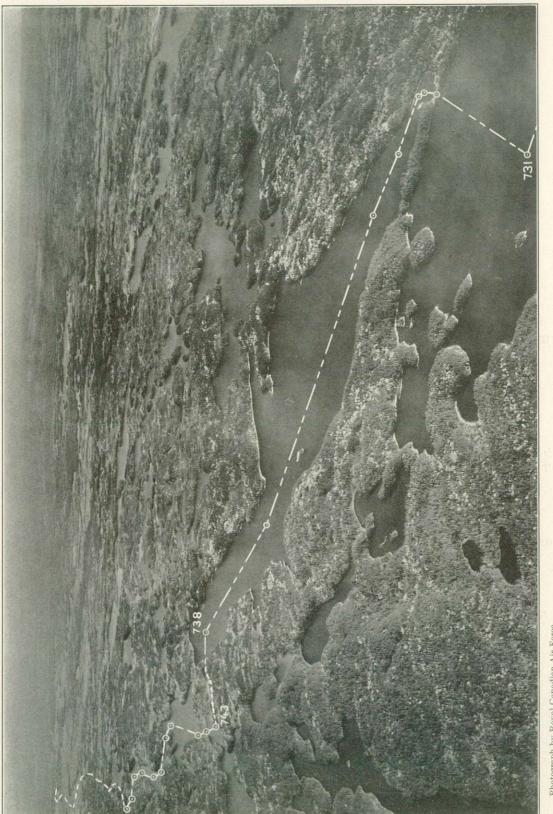

A topographic and hydrographic survey was made of the shore line and the deep-water channel. The survey of the islands adjacent to the boundary and of a narrow strip along the shore of the mainland was made with transit and stadia and mapped in the field on a scale of 1:20,000, contour interval 10 feet. The hydrographic survey was made in accordance with the standard practice of the United States Coast and Geodetic Survey, the hydrography being done for the party by the United States representative. His equipment for this work consisted of a 36-foot motor boat owned by the United States section of the commission.

Throughout the season the work was frequently retarded by rains and heavy windstorms. The waters of Lake of the Woods are frequently very rough, and during these periods constant care had to be exercised to prevent the launches from being driven ashore.

The party discontinued work on October 25 and went to Kenora, where the launches were hauled out and the outfit stored for the winter.

The personnel of the Canadian party for the season of 1912 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistants, F. P. Steers, H. M. Barton, H. P. Moulton, J. M. Perrier, and A. Albrecht; and 12 hands. The United States representative with the Canadian party in 1912 was F. D. Granger, assistant, United States Coast and Geodetic Survey.

# UNITED STATES PARTY ON THE EASTERN PART OF THE LINE (ROUND LAKE TO KNIFE LAKE)

The United States party which had been working westward from the eastern end of this section of the line since 1908 resumed work in 1912 on June 9 at Round Lake.

Their work was similar in every respect to that done in previous seasons namely, carrying forward a scheme of triangulation along the boundary waterways and mapping the shore lines of the lakes and narrow waterways by plane table and stadia. As in the previous season, transportation for all purposes was entirely by canoes.

The main scheme of triangulation, together with subsidiary schemes necessary to control the mapping and the positions of the boundary reference monuments, was extended as far westward as the western end of Knife Lake. From Round Lake to Saganaga Lake the main scheme was advanced directly across the loop which the boundary makes between these lakes, only the subsidiary scheme being carried immediately along the narrow, winding intervening boundary waterway. Azimuth observations were made at triangulation stations "Care," "Camp," "Dolores," and "Engle."

The topographic survey also was extended to Knife Lake. The survey of the lakes was made on a scale of 1: 20,000 and the narrower boundary waterways on a scale of 1: 5,000. A complete topographic map on a scale of 1: 5,000 with 20-foot contours was made of Swamp Portage, the boundary portage between Swamp Lake and Cypress Lake. Elevations for the survey were carried forward by vertical angles measured at the triangulation stations.

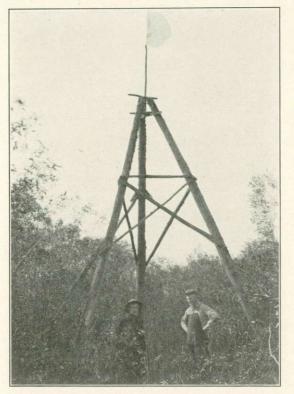

Work was discontinued at Knife Lake on October 29. The outfit of tents and other camp equipment was then taken by canoes westward along the boundary waterways to Prairie Portage on Basswood Lake and there stored for the winter in one of the warehouses of the St. Croix Lumber Co. From Prairie Portage the party went by boats of the St. Croix Lumber Co. southwestwardly through the chain of lakes to the end of the Duluth & Iron Range Railroad at Winton, Minn., and there disbanded.

The personnel of this United States party in 1912 was as follows: Chief of party, W. B. Fairfield; assistant, J. J. Phelan; and 15 hands.

#### UNITED STATES PARTY ON LAKE OF THE WOODS

The United States party, which during the earlier part of this season had been engaged upon the survey of the forty-ninth parallel boundary from Red River eastward through the Roseau Swamp country to Lake of the Woods, reached Lake of the Woods early in September. On September 18, the work on the forty-ninth parallel being completed, the party moved their camp outfit to Warroad, Minn. Here the saddle horses, teams, and wagons were disposed of by auction, and in their stead launches and small flat-bottomed boats were procured for work on the lakes.

The party with the outfit of boats and camp equipment left Warroad on September 19 and on September 20 arrived at Harrison Creek, Northwest Angle Inlet,

Old tripod at head of Northwest Angle Inlet erected by boundary survey of 1872–1876. (Photograph taken in 1912)

where they established camp on the meridian boundary at monument 924, about 2 miles due south of the Northwesternmost Point of Lake of the Woods.

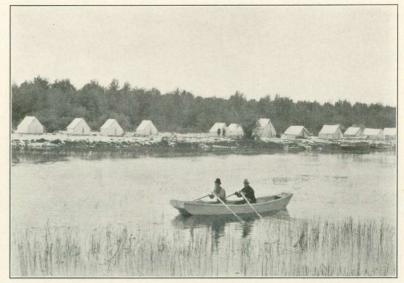

Work was immediately started on clearing the vista and making a topographic survey along the meridian boundary south from monument 925 and on making a detailed topographic and hydrographic survey of the upper part of Northwest Angle Inlet from a point southeast of the northernmost monument of the meridian boundary to the Northwesternmost Point.

An 833-meter base line was measured along the western shore of the inlet in the vicinity of the meridian line, and from this base a small scheme of triangulation was extended up the inlet to the vicinity of the Northwesternmost Point and also southward, to a junction with stations of the scheme of triangulation which had been extended southeastward therefrom by the Canadian party earlier that year. The triangulation was tied to monument 925

and the position of the Northwesternmost Point was determined. The azimuth of the meridian boundary was obtained from an astronomic azimuth determined by two nights' observations at triangulation station "New Rice." The party also determined by triangulation the position of an old tripod which was found standing

a short distance west of the Northwesternmost Point and which had been built by the surveyors of the boundary commission of 1872–1876.

The detailed topographic and hydrographic survey of the vicinity of the Northwesternmost Point was made by plane table and stadia on a field scale of 400 feet to the inch. It included a careful survey of the shore line of the inlet and of the course and depth of the

Camp of United States party on Harrison Creek at monument 924, October, 1912

#### SEASON OF 1912-LAKE OF THE WOODS

deep-water channel from a point a considerable distance southeast of the southernmost intersection of the channel with the meridian boundary to the northern end of the inlet, so as to take in the site of the original Northwesternmost Point.<sup>4</sup>

The topographic survey of the strip of country 2 miles wide along the meridian boundary was made on a field scale of

Camp of United States boundary party on Poplar Creek, near Northwest Angle Inlet, 1912

1:45,000, contour interval 10 feet. The distances between the monuments along the meridian line were determined by invar tape by base-measurement methods.

On October 7 camp was moved southward to a point on Poplar Creek, about 1 mile east of the meridian boundary in the vicinity of monument 921. Working from this camp the topographic mapping, the line measurement, and the vista cutting were extended south as far as the boundary crossing of Stony Creek.

On October 14, weather conditions having become so bad that further work was impracticable, the party returned to Warroad, Minn., and stored the outfit for the winter. Two topographers and their assistants remained at Warroad for a

<sup>4</sup> For description and map of the detailed survey, see pp. 108 and 111.

United States boundary survey party at Northwest Angle Inlet, October, 1912

time to map the town and the country along the lake shore adjacent thereto. The rest of the party disbanded.

The personnel of the United States party on Lake of the Woods was as follows: Surveyor in charge of the work, E. C. Barnard; chief of party, James H. Van Wagenen; assistants, E. V. Perkinson, R. K. Lynt, H. C. O. Clarke, F. C. Warner, and W. V. Hagar; foreman of line-cutting party, R. W. McGuire; and 17 hands (including 9 Indians). The Canadian representative with the United States party in 1912 was J. L. Rannie, D. L. S.

### SEASON OF 1913—LAKE OF THE WOODS, RAINY RIVER, RAINY LAKE, NAMAKAN, CARP, BIRCH, SUCKER, AND BASSWOOD LAKES

The season of 1913 marked the beginning of much greater activity on this section of the boundary line. To the larger organizations which had started work at Lake of the Woods in 1912 there was now added another United States party which up to this year had been engaged on the boundary along the forty-ninth parallel, with the result that considerably more progress was made between Lake of the Woods and Lake Superior than in any other year since the work was begun in 1908. Both United States and Canadian forces were widely distributed along the line, from Knife Lake to Lake of the Woods. This and the following year, 1914, were to be the seasons of greatest accomplishment on this section of the boundary line.

Also, the field work from this time on included a more comprehensive scheme of triangulation in this region and a more complete topographic survey, comprising not only the shore lines but also the contouring of all the islands and a strip of terrain immediately adjacent to the shores of the international waterways. These developments were in accordance with the added importance given to this section of the boundary waterways by international questions which had recently come before the International Joint Commission as heretofore referred to.

CANADIAN ORGANIZATION ON LAKE OF THE WOODS AND RAINY RIVER

The party assembled at Kenora, Ontario, and on May 15 established camp on an island off American Point near the entrance to Northwest Angle Inlet. Here they completed the mapping of the topography of the islands adjacent to the boundary and then moved to Bear Island, which lies immediately north of Big Island in Lake of the Woods, and made a junction between their triangulation covering Northwest Angle Inlet and the triangulation which the United States party had extended northeastward from the base at Warroad, Minn.

The party then moved to a point near the mouth of Rainy River and made the necessary surveys covering Rainy River from its mouth to Baudette. The triangulation started from the line "Burton—Oak" of the United States triangulation of Lake of the Woods, the reconnaissance and tower building for which had already been completed earlier that season, and included a scheme of major triangulation with sides from 3 to 6 miles in length and minor triangulation with stations on or near the river banks for determining the positions of the boundary reference monuments. The major triangulation was joined to the United States triangulation on the line "Rainy—Spooner," near Baudette.

#### SEASON OF 1913—LAKE OF THE WOODS AND RAINY RIVER

The party made a topographic map of the islands and of a narrow strip of territory along the shores of the lake and the river. Boundary reference monuments of the same type as those set in 1912 (iron posts set in concrete bases) were established on the islands adjacent to the boundary line from Oak Island to the mouth of Rainy River and along the banks of Rainy River upstream as far as Baudette.

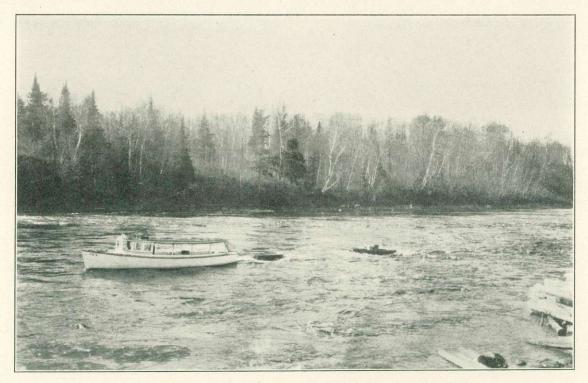

Early in September a small party took one of the large launches, a motor skiff, and a canoe up Rainy River and through Rainy Lake to Namakan Lake, and made a reconnaissance of the region to be surveyed by the Canadian party the next year. The remainder of the party continued work on Rainy River until October 27, when the party disbanded. The launches and camp outfit of the main party were stored for the winter at Rainy River, Ontario, and the outfit of the reconnaissance party on Namakan Lake was housed at Kettle Falls.

43

The personnel of the Canadian organization during the season of 1913 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistants, F. P. Steers, D. L. S.,

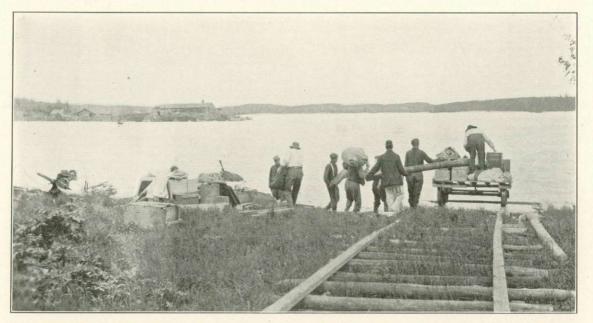

Canadian launch I. B. S. ascending Soo Rapids, Rainy River, 1913

H. M. Barton, D. L. S., H. P. Moulton, D. L. S., G. B. Herridge, and J. M. Perrier; and 14 hands. The United States representative with the Canadian party in 1913 was F. D. Granger, assistant, United States Coast and Geodetic Survey.

UNITED STATES PARTY ON THE EASTERN PART OF THE LINE (CARP LAKE, BIRCH, SUCKER, AND BASSWOOD LAKES)

The United States party that had closed the season of 1912 at the western end of Knife Lake assembled in 1913 at Prairie Portage on May 10 and moved the camp outfit eastward to Carp Portage at the western end of Carp Lake, where field work was begun.

The scheme of minor triangulation was started at the western end of Knife Lake from the line "Faith—Enough," the terminus of the triangulation of the previous season. It was extended westward, covering Carp, Birch, Sucker, and Basswood Lakes and Basswood River, as far as the eastern end of Crooked Lake. At three

Transportation facilities used by the survey parties on Prairie Portage; Basswood Lake to Sucker Lake

of the triangulation stations, "Garb," "Gyp," and "Hoist," azimuth observations were made. Late in the season, after ice had formed, the party measured a base line on the ice on Basswood Lake from station "Hoist" to station "Hoist North Base."

A complete topographic map on a scale of 1 : 20,000, with 20-foot contour interval, was made of the terrain along the boundary waterways from the western end of Knife Lake to the eastern end of Crooked Lake. Detail maps on a scale of 1 : 5,000 with 10-foot contour interval were made of the narrow parts of the boundary streams connecting the lakes. The mapping was done with plane table, telescopic alidade, and stadia. Vertical control for the topography was obtained by measuring vertical angles at the stations of the scheme of triangulation. Spirit levels were run across all the portages, including the 4-mile portage from Hoist

#### SEASON OF 1913—BASSWOOD LAKE

Portage on Basswood Lake to Fall Lake. Spirit levels were also run at the close of the season from a bench mark on Fall Lake to two Duluth & Iron Range Railroad bench marks at Winton, Minn.

Transportation was carried on entirely by water—by canoes and motor boats.

The party discontinued the season's work at Hoist Portage on Basswood Lake late in October.

The camp outfit was taken to Winton, and there stored in one of the warehouses of the St. Croix Lumber Co.

The personnel of the United States party on the eastern part of the line in 1913 was as follows: Chief of party, W. B. Fairfield; assistant, J. J. Phelan; and 15 hands.

# UNITED STATES PARTIES ON THE WESTERN PART OF THE LINE (LAKE OF THE WOODS, RAINY RIVER, RAINY LAKE, AND NAMAKAN LAKE)

The United States forces operating on the western part of the boundary from Lake of the Woods to Lake Superior during the field season of 1913 comprised two organizations. The first of these, which had reached Lake of the Woods late the previous season and which was under the direction of Mr. E. C. Barnard, was subdivided into three parties, namely, a large party which did topography,

Gull nests on Cormorant Rock, at station "Gull," Lake of the Woods

minor triangulation, monumenting, and leveling on Lake of the Woods and Rainy Lake; a small party which made the detailed surveys of Fort Frances and International Falls and the topographic map of Black Bay, Rainy Lake; and a triangulation party which did the reconnaissance and major triangulation of Rainy Lake and Namakan Lake. The second organization, which, following the completion of

A small gill-net kept the surveyors supplied with whitefish

45

their work on the forty-ninth parallel in 1912, was just beginning work on this section of the boundary and which was under the direction of Mr. C. H. Sinclair,

comprised two triangulation parties, one of which did the reconnaissance and major triangulation of Lake of the Woods and of Rainy River from Baudette to International Falls, and the other the minor triangulation along Rainy River from Birchdale to Fort Frances.

Topographic camp at Zippel, Lake of the Woods, 1913

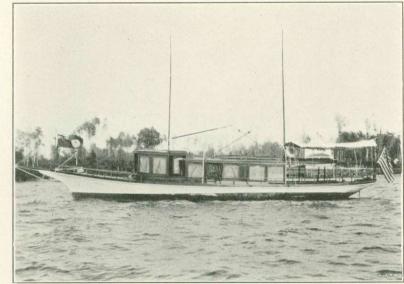

MR. BARNARD'S ORGANIZATION

On February 15, 1913, a member of Mr. Barnard's organization was sent to Warroad, Minn., with instructions to establish bench marks on Lake of the Woods, Rainy Lake, and Namakan Lake, in order to provide vertical control for the topographic mapping that was to be done later in the season. After outfitting at Warroad he went to Fort Frances, Ontario, and with three men started eastward over the ice on Rainy Lake, taking with him the necessary camp equipment on a bobsled drawn by a light team of horses.

He established bench marks along the shores of the lakes at intervals of 5 miles, determining the elevation of each bench mark above the water surface of the lake by cutting a hole through the ice near by and leveling from the water surface to the bench mark with a spirit level. During these operations a record was kept of the elevation of the water surface of Rainy Lake as determined by staff gages at Ranier and Kettle

Falls, and from these data, together with the known elevations of the zeros of the gages above mean sea level, were obtained the elevations of the Rainy Lake bench marks.

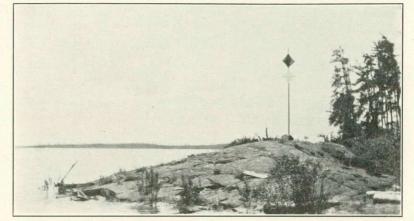

The same procedure was adhered to on Namakan Lake and, in all, 21 bench marks were established along the shores of the two lakes. Experiencing at times temperatures as low as 40° below zero, the party reached the head

#### United States launch Amrita

of Namakan Lake on March 1. Then, after running a forward and a backward line of levels to determine the difference of elevation between Rainy Lake and Namakan Lake, they returned to Warroad, and similarly established three bench marks on Lake of the Woods. After the completion of the leveling, the party was engaged on topographic work on Lake of the Woods until May 15, when they joined the larger organization, which came to the field at that time.

The main party of Mr. Barnard's organization—a

Type of triangulation signal used in determining the positions of the boundary reference monuments

topographic, minor triangulation, monumenting, and leveling party—assembled at Warroad early in May, and after overhauling the equipment that had been stored there at the end of the previous field season and hiring a 40-foot launch capable of withstanding the rough weather on Lake of the Woods, they completed the topographic mapping of the strip of country along the shore of the lake from Stony Point to the mouth of Rainy River, working from Warroad and from camps at Long Point, Zippel, and Pine Island.

The work on Lake of the Woods was finished on June 18, and on the following day the party moved by water to Baudette, Minn., from which place they went by rail to Ranier, Minn. By June 23 they were in camp on Birch Point on Rainy Lake, about one-half mile east of Ranier. Here they took up the topographic mapping, the selection of sites for the boundary reference monuments, and the reconnaissance and observing of a scheme of minor triangulation necessary to determine the geographic positions of the boundary reference monuments and the turning points of the boundary line and for the control of the topographic mapping.

The party on July 18 moved camp to the narrow isthmus connecting the main parts of Sand Point Island. This site was centrally located and afforded a good harbor for the large boats on either side of the narrow neck of sand beach which was only

Survey camp on Birch Point, Rainy Lake, 1913

about 20 feet wide and over which the small boats could be easily portaged. It was also near one of the bench marks, established during the preceding winter, making it easy to determine the elevation of the zero of a staff gage for the daily determination of the height of the water surface which was used as a reference plane by the topographers.

From this camp the topographic work was carried as far east as Powder Island and the minor triangulation was extended south to the entrance to Black Bay, where a triangulation station was established on each side of the entrance, from which the small topographic party could extend control for the mapping of Black Bay which was to be done by them later in the season.

On September 2 the party moved to a small bay on the shore of the mainland one-fourth mile east of Little Rocky Narrows where a grove of jack pines offered protection from wind and storms. They moved again on September 26 to a sheltered spot on MacKenzie Island facing the comparatively calm waters of Brule Narrows, and from this camp, which was the last of the season, the topographic mapping was completed to the eastern end of Brule Narrows, and the minor scheme of triangulation was carried as far east as Big Island.

By this time thin ice was forming on the small bays, and occasional snowstorms were interfering with the work to such extent that on October 23 the party discontinued work for the season and moved the camp equipment to Ranier where it was inventoried and stored for the winter. Their launches were hauled out at Fort Frances.

During the progress of the work of the foregoing party, a small topographic party was also engaged on work at International Falls, Minn., and later in the season on Black Bay on the south shore of Rainy Lake. Late in May this party began the mapping of the towns of Fort Frances, Ontario, and International Falls and Ranier, Minn., and the section of Rainy River adjacent thereto. A short base line was measured along the Canadian National Railway on the Canadian side of the river, from which a small scheme of triangulation was developed to determine the positions of points along the river for control of the topographic mapping and the positions of the boundary reference monuments.

The work of the party in this vicinity was completed on August 5 and they then moved to Black Bay, on Rainy Lake. Starting at the two triangulation stations at the entrance to Black Bay, which had been established by the main party, a small scheme of triangulation was carried into the bay and a topographic map made of the strip of country along the shore. This work was completed on October 21 and the party returned to Ranier and disbanded.

In addition to the above-mentioned topographic parties operating on Lake of the Woods and Rainy Lake, a triangulation party of Mr. Barnard's organization was engaged on the major scheme of triangulation covering Rainy Lake and Namakan Lake. This party consisted of an observer and reconnaissance man and a tower-building organization. They were provided with a 36-foot launch and a 23-foot flat-bottomed motor-boat and with all other necessary equipment to do reconnaissance, build towers, clear lines of sight, and make the necessary triangulation observations.

The party was organized at Fort Frances, Ontario, during the last week of May and began work eastward on Rainy Lake from a camp near Ranier, Minn. They next camped on Sand Point Island, not far from the western entrance to Brule Narrows, and later, as the work progressed, they moved camp to a small island east of Big Island, about midway between Brule Narrows and the eastern end of Rainy Lake. From here they moved to Kettle Falls, where they completed the reconnaissance and tower building on the eastern end of Rainy Lake and extended the scheme into Namakan Lake. Their last camp of the season was at a point just above Squirrel Narrows on Namakan Lake.

The season's work of this party included the reconnaissance for the major scheme of triangulation covering Rainy Lake and most of Namakan Lake; the erection of 15 nativetimber triangulation towers of an average height

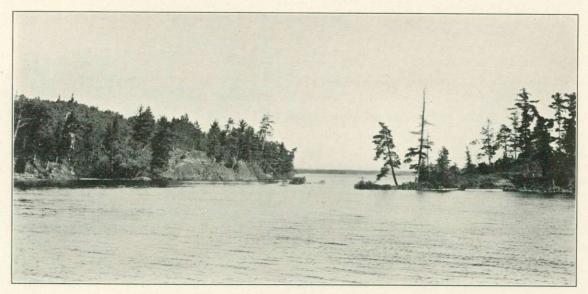

The Crab: type of motor boat used by triangulation party on Rainy Lake, 1913

of 45 feet; and the observing of this triangulation as far east as Big Island in Rainy Lake.

The operations of this party were brought to a close on October 30. The party then returned to the western end of Rainy Lake and stored their equipment with the outfits of the other parties at Ranier and Fort Frances.

The personnel of the foregoing United States parties under the direction of Mr. E. C. Barnard in 1913 on Lake of the Woods, Rainy River, Rainy Lake, and Namakan Lake was as follows: Surveyor in charge of the work, E. C. Barnard; chiefs of parties, James H. Van Wagenen, F. C. Warner, and F. S. Ryus; assistants, H. C. O. Clarke, R. P. Strough, R. K. Lynt, E. V. Perkinson, and G. A. Perry; and 18 hands. The Canadian representative with the United States parties in 1913 was I. R. Pounder, D. L. S.

Little Rocky Narrows, one of the steamboat channels on Rainy Lake 96030-31----5

### MR. SINCLAIR'S ORGANIZATION

Concurrently with the foregoing described work of the three United States parties under the direction of Mr. E. C. Barnard, two other United States parties under Mr. C. H. Sinclair, assistant, United States Coast and Geodetic Survey, were also engaged in 1913 upon the major and minor triangulation of Lake of the Woods and Rainy River. These two parties during the previous year, 1912, had completed the triangulation eastward along the forty-ninth parallel from Red River to Lake of the Woods and late in the season that year had measured a 9,269-meter base line along the railroad adjacent to the west shore of Lake of the Woods and had erected two 85-foot triangulation towers at the ends of the base preparatory to expanding the major scheme eastward across the lake in 1913.

This organization began work on Lake of the Woods early in March, 1913, while the lake was still frozen, so that the tower building lumber could be trans-

ported across the lake by sleds, thereby avoiding the difficulties of boat transportation during the rough weather common on Lake of the Woods after the spring thaw. Furthermore, it was imperative that the transportation of these materials over the adjacent swamps and muskeg be done while the ground was frozen.

As soon as the work of transporting and distributing the lumber and

United States triangulation and topographic party at Brule Narrows, Rainy Lake, 1913

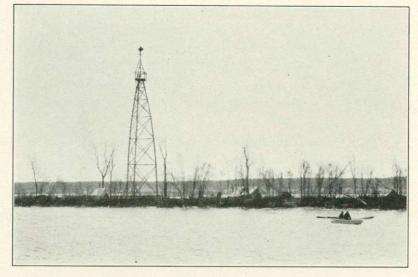

tower-building materials to the various triangulation station sites on the shores and islands of the lake was well started, the party went to Northwest Angle Inlet and set and located two cast-iron monuments to reference the point determined by the United States party in 1912 as the southernmost intersection of the meridian boundary and the boundary through Lake of the Woods. The commissioners were agreed that this point should be permanently fixed and monumented, and were prepared to recommend to the two Governments that it be adopted as the common terminus of the two sections of the boundary line defined by Articles V and VI of the treaty of 1908 <sup>5</sup> in lieu of the original Northwesternmost Point, thereby eliminating the two short intersecting portions of these lines north of this point. (See map, p. 108.) These monuments, which were 8-foot hollow cast-iron posts, projecting 5 feet above the concrete bases, were set on the shores of the inlet, one east and one west of the point

<sup>&</sup>lt;sup>5</sup> Later, by the treaty signed Feb. 24, 1925, this point as referenced in 1913, was formally adopted by the two countries as the northernmost point of the boundary line in Lake of the Woods, in lieu of the Northwesternmost Point as originally established by Tiarks in 1825. (See treaty of 1925, p. 12.)

SEASON OF 1913-LAKE OF THE WOODS AND RAINY RIVER

of southernmost intersection of the two lines, 2,522 feet north of monument 925 of the meridian boundary and 4,785 feet south of the original Northwesternmost Point.

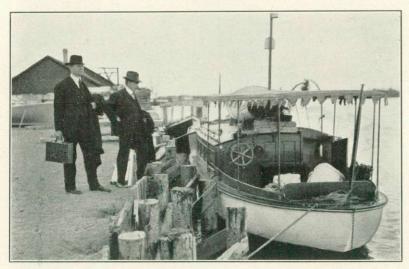

By the time three of the triangulation towers had been built, the ice began to break up, so the party moved temporarily to Fort Frances, Ontario, where they laid out an 8,062-meter base line along the Canadian

Tower at triangulation station "Willow 1913," Lake of the Woods

Northern Railway and erected an 80-foot tower at each base station. They then returned to Lake of the Woods, and, after erecting the remaining towers, took up the observation of the horizontal angles and completed the major triangulation of the lake to the mouth of Rainy River.

On June 20 the party returned to Fort Frances, and after measuring the base line which they had laid out earlier in the season and observing an azimuth at "Fort Frances East Base" they began developing a major scheme of triangulation from this base westward along Rainy River. Also, one quadrilateral was extended eastward to Rainy Lake to furnish a base for the triangulation that the party under Mr. E. C. Barnard had started along that part of the boundary. Towers 30 to 90 feet in height constructed of sawed timber were built at 20 of the 22 stations of the triangulation on Rainy River, from the outlet of Rainy Lake to Baudette, Minn. The progress of the work was retarded by several strong windstorms which blew

E. C. Barnard and C. H. Sinclair, chiefs of United States parties, Lake of the Woods, 1913

down eight of the towers some of which had not yet been occupied and consequently had to be rebuilt.

By the end of the season the party had connected their triangulation to the major triangulation done earlier in the season by the Canadian party along the lower part of Rainy River from Lake of the Woods to Baudette, Minn. They then returned to Fort Frances,

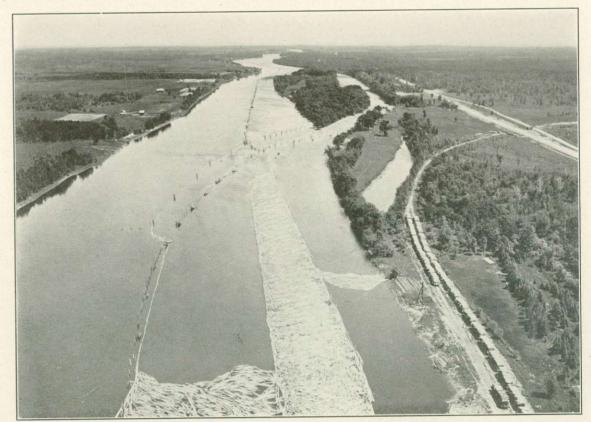

stored their equipment in the Canadian customs building, and on November 19 disbanded.

During the progress of the above-described major-triangulation work on Rainy River a second party of Mr. C. H. Sinclair's organization was likewise engaged on the scheme of minor triangulation along the river. This party was detached from the main organization immediately after the base at Fort Frances was measured, and established their first camp near Fort Frances.

The minor triangulation done by this party was connected with the major scheme along the river at intervals of approximately 10 miles and was further strengthened by making base-line measurements of some of the shorter lines of the scheme. The quadrilaterals were in general long and narrow, the purpose being to keep the stations near the river banks in order to avoid building towers and cutting lines through the timber and to facilitate making connections with the boundary reference monuments.

During the progress of the season's work of this party on Rainy River, camp was moved successively to sites at Little Fork River, Loman, Minn., Manitou, Minn., and, finally, to Birchdale, Minn., at which place, on November 1, the work was brought to a close. The party then stored their outfit at Birchdale and disbanded.

The personnel of the foregoing United States parties under the direction of Mr. C. H. Sinclair in 1913 on Lake of the Woods and Rainy River was as follows: Surveyor in charge of the work, C. H. Sinclair; chiefs of parties, Jesse Hill and E. R. Martin; and 12 hands. The Canadian representative with the United States parties in 1913 was I. R. Pounder, D. L. S.

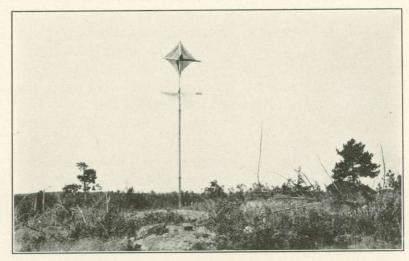

Photograph by Royal Canadian Air Force Typical stretch of Rainy River; at Watrous Island, near Loman, Minn.

## FIELD WORK OF THE UNITED STATES ORGANIZATIONS, 1913

The field work done in 1913 by the several parties of the United States organizations on the western part of the line, whose operations have just been described,

comprised the topographic surveys necessary for the preparation of the boundary maps and the major and minor triangulation to control the topographic surveys and to determine the geographic positions of the boundary reference monuments and the turning points of the boundary line. <sup>6</sup>

The topographic surveys included the mapping of the islands and the ter-

Major-triangulation station "Berry," Rainy Lake, 1913

rain of the mainland along the shores of the boundary waterways with plane table, telescopic alidade, and stadia, supplemented in the more densely wooded areas by string tapes and aneroid barometers. In general, the mapping was done on a field scale of 1:20,000, contour interval 10 feet. The towns of Ranier and International Falls, Minn., and Fort Frances, Ontario, were mapped on a scale of 1:5,000, contour interval 5 feet. The shores of Lake of the Woods, where less detail was necessary, were mapped on a scale of 1:45,000, contour interval 10 feet. Each topographic sheet was controlled by the geographic positions of the triangulation stations and the boundary reference monuments plotted thereon, and by plane-table triangulation

extended from these points to the numerous islands and into the sinuosities of the shore line.

Vertical control for the topographic mapping was obtained from the bench marks established by one of the parties in February and March before the ice went out. A staff gage, the elevation of which was determined from one of these bench marks, was established as near as possible

A topographer and his assistants moving between stations, Rainy Lake to each camp site, and by

<sup>6</sup> For a detailed description of the survey work on this section of the boundary line, see "Field and Office Methods and Results," p. 84.

means of it a daily determination was made of the elevation of the water surface. The gage was read usually in the morning before the topographers left camp, and the elevation of the water surface, thus obtained for that particular day, was used by them as a reference plane in determining the elevations of the starting points of their traverse lines which were run back from the lake shore to locate the contours.

The schemes of major triangulation consisted of comparatively strong figures; the lines of sight were from 2 to 10 miles in length. The schemes of minor triangulation were started from lines of the major schemes and were extended along the shores of the mainland and islands, following the immediate course of the boundary line and convenient to the locations of the boundary reference monuments. The points to be used as boundary reference monuments were first selected as triangulation stations, generally in pairs, near the turning points of the boundary line. They were nearly always located on ledge rock or on large bowlders, as near the boundary line as was practicable, and were marked by the standard 2-inch bronzedisk triangulation station marks. Such of these stations as were finally selected by the commissioners as boundary reference marks were then further marked by standard bronze reference posts (see p. 91).

Transportation for the surveying parties in this region, including moving camp, daily movements to and from work, and the transportation of supplies and materials. was carried on in general by launches and small boats. For this purpose the United States organization was equipped with 6 motor boats 20 to 48 feet in length, suitable for all kinds of weather on the lakes, and 5 small flat-bottomed boats equipped with outboard motors. Also, an additional motor boat was furnished by the Canadian Government for the use of the Canadian representative attached to the United States organization. At times teams were also used to advantage, particularly for the work on Lake of the Woods before the ice went out and for the tower building and major-triangulation work along Rainy River. Considerable backpacking also was done, especially in connection with the tower-building work of the major-triangulation party on Rainy Lake and Namakan Lake. Tools and heavy tower-building equipment had to be carried from the boats at the lake shores inland to the high points selected for the triangulation stations, and the native timber used in the construction of the towers had to be moved by the men from the places where it was felled to the tower sites. This was by far the most arduous part of the season's work.

## SEASON OF 1914—RAINY RIVER, RAINY LAKE, NAMAKAN LAKE, SAND POINT LAKE, LAC LACROIX, CROOKED LAKE, BASSWOOD RIVER, AND BASSWOOD LAKE

The distribution of the field work of the United States and Canadian parties in 1914 and the general character of the operations were much the same as those of the previous year. There was a Canadian organization doing triangulation, topographic mapping, and monumenting on Namakan Lake, Sand Point Lake, and Lac LaCroix. There was a United States organization on the eastern part of the line doing triangulation, topographic mapping, and monumenting on Basswood Lake, Basswood River, and Crooked Lake; and there was a second United States organization on the western part of the line engaged on similar work on Rainy River, Rainy Lake, and Namakan Lake.

## CANADIAN ORGANIZATION ON NAMAKAN LAKE, SAND POINT LAKE, AND LAC LACROIX

Late in April an advance party of three members of the Canadian organization went to The Hoist on the south shore of Namakan Lake and crossed the lake on the ice to Kettle Falls, where a launch and some small boats had been stored at the close of the previous season. The boats were repaired and put in condition for the season's work. At the same time a second small advance party went to Rainy River, Ontario, where the principal part of the equipment was stored. They overhauled and repaired the outfit and made a survey of part of the towns of Baudette, Minn., and Rainy River, Ontario, and then transferred their equipment by water to Namakan Lake, where the entire party was assembled by May 20. They began work at Namakan Narrows, the point to which the United States party had extended the reconnaissance for the major triangulation from the westward the year before.

During the first part of the season the survey was extended from Namakan Narrows eastward. As in the previous seasons, a scheme of minor triangulation for the control of the topography and the location of monument sites was extended along the shores of the waterways and was connected with the major scheme of triangulation at frequent intervals. A strip of topography on a scale of 1:20,000 was mapped along the shores of the mainland, and the islands in the boundary lakes and streams were completely contoured. Monument sites were selected and the positions of the points chosen were determined by triangulation, but the monuments were not set until the following season.

By the end of July the work as a whole had progressed as far eastward as Sand Point on Sand Point Lake, and the major scheme of triangulation had been extended to Lac LaCroix. The main party then moved camp back to Steamboat Narrows to take up the work westward on Namakan Lake, leaving a smaller party to continue the major and minor schemes of triangulation toward the east.

By October 25 the main party had completed the topographic mapping and minor triangulation to the west end of Namakan Lake and at Kettle Falls had made a junction with the work of the United States party which had just been completed to this point from the westward. At Kettle Falls the main party was joined by the party from Lac LaCroix. Here the boats were hauled out and the outfit was stored for the winter, and on October 27 the party disbanded.

The personnel of the Canadian organization in 1914 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistants, F. P. Steers, D. L. S., H. M. Barton, D. L. S., J. M. Sheppard, G. B. Herridge, L. C. Nesham, Albert Wilkins, A. A. Brown, and J. M. Perrier; and 15 hands.

## UNITED STATES ORGANIZATION ON THE EASTERN PART OF THE LINE (BASSWOOD LAKE, BASSWOOD RIVER, AND CROOKED LAKE)

Substantially the same party that had operated on this part of the line in 1913 reassembled at Winton, Minn., the following spring and on May 29, began field work at the eastern end of Basswood Lake.

During the first part of the season the entire party was engaged in extending the major scheme of triangulation westward from the eastern end of Basswood

Lake to the middle of Crooked Lake, to control the minor triangulation done in 1913. They also continued the minor scheme of triangulation westward along the shores of Crooked Lake. Azimuth observations were made at stations "Igo" and "Exit," at which boundary reference monuments 696 and 672 were later set.

The topographic mapping was done as in the previous season with plane table and stadia. The islands and a strip of terrain along the shores of the boundary waterways were mapped on a scale of 1:20,000, contour interval 20 feet. The narrow part of Crooked Lake was mapped on a scale of 1:5,000. Elevations for the vertical control of the topographic mapping were obtained by measuring vertical angles at the triangulation stations.

Transportation for the party was entirely by water—by motor boats and canoes. Motor boats belonging to a fishing company were hired for moving camp and for bringing in supplies from Winton, Minn. Canoes were used for the day-to-day transportation of the surveyors to and from work.

The party discontinued work on October 22 at Curtain Falls, at the western end of Crooked Lake, and returned to Winton, Minn., at which place the instruments, outfit, and canoes were stored for the winter in a warehouse of the St. Croix Lumber Co.

The personnel of the United States party during the season of 1914 on Basswood Lake and Crooked Lake was as follows: Chief of party, W. B. Fairfield; assistant, J. J. Phelan; and 13 hands.

## UNITED STATES ORGANIZATION ON THE WESTERN PART OF THE LINE (RAINY RIVER, RAINY LAKE, AND NAMAKAN LAKE)

The United States organization operating on the western part of the boundary from Lake of the Woods to Lake Superior during the field season of 1914 comprised

Snapshot taken by a member of the United States party on Crooked Lake, 1914

three separate parties under the direction of Mr. E. C. Barnard: A large topographic, minor triangulation, and monumenting party on Rainy Lake; a majortriangulation party operating successively on Rainy Lake, Namakan Lake, and Rainy River; and a small topographic party on Rainy River. The parties assembled at Ranier, Minn., about May 15. The boats and camp outfits were removed from storage, and the parties immediately established camps and began field work.

The largest of the three parties, the party to which was assigned the completion of the topographic mapping, minor triangulation, and monumenting on Rainy Lake, which had been begun the previous season, established camp on May 18 on a small island near the south shore of Rainy Lake about 1 mile west of Big Island. They began operations at the eastern end of Brule Narrows, where they had discontinued the work in 1913, and continued eastward. They also mapped Saginaw Bay, which lies southwest of Brule Narrows.

The party made their next camp on an island on the Canadian side of the lake near Black Point, about 3 miles west of Rat River, to which place they moved on June 22. The work progressed steadily and on July 24 camp was again moved to Surveyors Island, a small island at the eastern end of Rainy Lake at the mouth of Kettle Channel near the northwest shore of Oak Island.

By the middle of August it was apparent that the work on Rainy Lake could easily be finished before the weather became too cold for field work, so one of the topographers and his assistants were transferred to Rainy River to help finish that work.

United States topographic party moving camp; Black Point, Rainy Lake, 1914

On September 13 the party, with the exception of a topographer who remained at Kettle Falls to complete the topographic work on Hale Bay, moved to Little Rocky Narrows west of Brule Narrows where the party had camped the year before and took up some additional topographic work to complete the mapping of Seine Bay and Swell Bay, which the commissioners had decided should be included in the general map of Rainy Lake. As soon as the work on Swell Bay was completed, camp was moved to Seine Bay at the entrance to Seine River and, with the aid of favorable weather, the work in that vicinity was completed by October 7. The party was then engaged for a few days before the close of the season in completing the setting of boundary reference monuments at various places on the lake.

The topographic work done by the United States party on Rainy Lake during the field season of 1914 included the mapping of the islands and the strip of country as far inland as the immediate height of land along the shores of the boundary waterways. The methods used were similar in every respect to those of the season of 1913. In general, the mapping was done on a field scale of 1:20,000, contour interval 10 feet. The terrain along Kettle Channel and at Kettle Falls was mapped on a field scale of 1:5,000, contour interval 5 feet. Vertical control for the topographic mapping was based on the bench marks established on Rainy Lake in February, 1913. The elevation of the water surface of the lake was determined daily from fixed gages which were established for that purpose, the elevation of the zero of each gage being determined by spirit levels run from the nearest bench mark.

The minor triangulation done by the party was started from lines of the major scheme and was extended along the shores of the mainland and islands, following the immediate course of the boundary line in order to directly determine therefrom the geographic positions of the boundary reference monuments. Five of the short

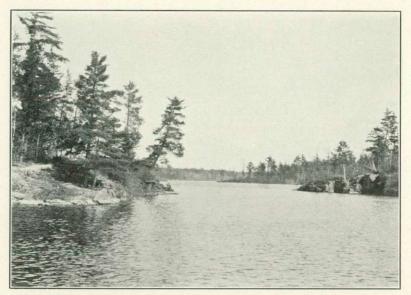

Camp of United States topographic party; Surveyors Island, at entrance to Kettle Channel, Rainy Lake, 1914

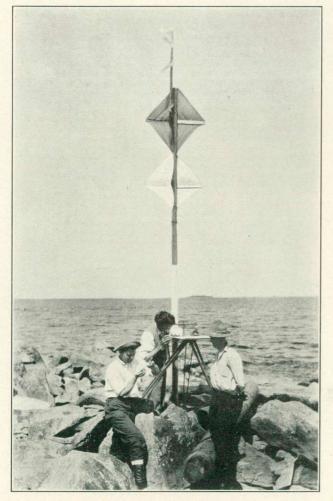

#### SEASON OF 1914—RAINY LAKE

lines of the minor scheme of triangulation along Kettle Channel were measured with an invar tape. Bronze reference monuments of the type shown on page 91 were set and located (generally at stations of the minor triangulation) to reference the turning points of the boundary line.

All of the work on Rainy Lake, including the monument setting and the survey of Hale Bay, was completed by October 13.

Kettle Channel; boundary waterway between Rainy Lake and Namakan Lake

Topographic work on Rainy Lake, 1914

The party then moved to Ranier, where the instruments were packed and shipped to Washington, D. C. As the work assigned to the United States parties on the western part of this section of the boundary was now practically completed, the boats and most of the camp outfit were sold at public auction, and on October 17 the party disbanded.

During the time the work of the above party on Rainy Lake was in progress, a major-triangulation party was also engaged on Rainy Lake and Namakan Lake completing the major triangulation, the reconnaissance for which had been done the previous year. The work was carried as far eastward as Namakan Narrows to a junction on the line "Bay–Tower" with the triangulation done by the Canadian party in 1914.

This party went to the field on May 18 with the topographic and minor-triangulation party whose work has just been described, and for a few days camped with that party at their first camp of the season, about a mile west of Big Island on

Rainy Lake. Beginning at the point at which work had been discontinued the previous season, the party proceeded eastward with the observing of the major triangulation and shortly moved to Kettle Falls where they stayed for a few days, completing the observing in that vicinity, and then moved eastward Namakan Narrows to where they established

United States topographic and minor-triangulation party, Rainy Lake, 1914

camp with the Canadian party. They completed their work on Namakan Lake on June 30.

They then moved by water to Birchdale, Minn., and started work on the scheme of minor triangulation where it had been discontinued in 1913, extending it down

Rainy River to Baudette, Minn., where they made a junction with the Canadian scheme of triangulation which had been brought up the river from Lake of the Woods.

By September 1 the triangulation work on Rainy River from Birchdale to Baudette was finished. The party then took up the setting of the monuments to reference the turning points of the boundary line from Baudette to International Falls. These monuments consisted of the usual type of bronze-post reference monuments shown on page 91.

The triangulation work done by this party in 1914 included the erection of three additional towers on Namakan Lake, the completion of the horizontal angle measurement of the general scheme of major triangulation on Rainy Lake and Namakan Lake, and the determination of an astronomic azimuth. The work on Rainy River included the completion of the reconnaissance of the scheme of minor

Native-timber tower at triangulation station "Brule," Rainy Lake, 1914

triangulation immediately adjacent to the boundary, the observing of this scheme, and the measurement of 12 short base lines. This minor triangulation was tied to the major scheme at five points.

The triangulation party closed their season at International Falls, Minn., on November 11, having completed all the triangulation work which had been assigned to the United States parties on the western part of this section of the boundary. The boats were sold at public auction and the instruments and other equipment were shipped to Washington, D. C.

While the foregoing triangulation work was being carried on, the small topographic party, to which the topographic survey of Rainy River had been assigned, had established their first camp May 21 on an island in Rainy River below the dam at International Falls, Minn., and had immediately begun work westward down the river. The weather was favorable for rapid progress, and on June 10 they moved to Isherwood, Ontario, 12 miles farther downstream. While at this camp their work was completed to the mouth of Little Fork River, and on July 1 camp was again moved to a point on the Canadian side of Rainy River, opposite the mouth of Big Fork River.

About the middle of August the topographic force on Rainy River was increased by the addition of a topographer and his assistants, who were transferred from the party on Rainy Lake. The work proceeded rapidly and was completed at Rapid River, Ontario, on October 21. The two topographers then went to Baudette, Minn., and from there proceeded to Washington, D. C.

Transportation for the several parties during the season of 1914 was by launches and flat-bottomed boats equipped with outboard motors. On Rainy Lake, use was also made of the transportation facilities furnished by two large commercial launches which made regular trips twice a week between Ranier and Kettle Falls. The parties on Rainy River used three small launches and several skiffs. In addition to the other boat equipment the parties were equipped with scows on which heavy loads could be transported when moving camp.

The personnel of the United States parties on Rainy Lake, Namakan Lake, and Rainy River for the season of 1914 was as follows: Surveyor in charge of the work, E. C. Barnard. Topographic and minor-triangulation party on Rainy Lake: Chief of party, James H. Van Wagenen; assistants, H. C. O. Clarke, R. K. Lynt, E. V. Perkinson, G. A. Perry; and 12 hands, including rodmen. Triangulation party on Rainy Lake, Namakan Lake, and Rainy River: Chief of party, Jesse Hill; and 5 hands. Topographic party on Rainy River: Chief of party, Lee Morrison; and 3 hands. The Canadian representative with the United States parties in 1914 was I. R. Pounder, D. L. S.

## SEASON OF 1915—LITTLE VERMILION LAKE, LOON RIVER, LOON LAKE, LAC LACROIX, CROOKED LAKE, BASSWOOD RIVER, BASS-WOOD LAKE, AND KNIFE LAKE

After the close of the season of 1914 the number of parties engaged on the boundary from Lake of the Woods to Lake Superior was reduced by the transfer of the larger United States organization to the Maine-Quebec highlands boundary, leaving one Canadian party and one United States party to carry on the work. In 1915 these two parties continued the survey of the portions of the boundary on which they had been engaged in 1914, working from opposite directions toward a junction point near Curtain Falls.

## CANADIAN PARTY ON LITTLE VERMILION LAKE, LOON RIVER, LOON LAKE, AND LAC LACROIX

Early in May the Canadian chief of party, who had discontinued work in 1914 near the southern end of Sand Point Lake, sent a few men to Kettle Falls to make repairs to their camp outfit and boats. After they had attended to these preliminaries they moved the outfit to Little Vermilion Narrows and made the first camp of the season. By May 12 the entire party was assembled.

The work was similar in most respects to that of the previous season. The minor triangulation and the topographic mapping were continued from Sand Point Lake up the narrows, through Little Vermilion Lake, and into the valley of Loon River. Low water caused considerable trouble in the rapids in Little Vermilion Narrows; and in Loon River a dam had to be constructed to obtain a depth of water sufficient to float the launches of the party.

In the Loon River valley, which is narrow and heavily timbered, the minor triangulation was discontinued in favor of traverse, which was run along the river, crossing it several times. The traverse was continued around the "Big Bend" and up the river to a point where the valley becomes wide enough again for triangulation to be executed with economy. A base line was measured at this point. The minor triangulation on Lac LaCroix, starting from a line of the major triangulation, was then extended down Loon Lake and Loon River and was tied to the base at the end of the precise traverse.

Reference monuments were set along the portion of the boundary covered by this season's operations as far as Loon Lake and also at the sites whose positions had been determined by triangulation in 1914 along the boundary from Kettle Falls to Sand Point. The reference monuments were manganese-bronze posts set in solid rock or in concrete bases 12 inches square.

A topographic survey was made of Little Vermilion Lake, Loon River, Loon Lake, and part of Lac LaCroix. This work was done with plane table and stadia on a scale of 1 : 20,000, contour interval 10 feet. Elevations for vertical control of the topographic mapping were obtained from a line of levels carried eastward from a bench mark established on Namakan Lake by the United States party in 1913.

## SEASON OF 1915-LITTLE VERMILION LAKE TO LAC LACROIX

Spirit levels were run across the portages from one lake to the next, and the elevations were carried across the lakes by water levels by means of staff gages upon which simultaneous readings were made of the plane of the water surface at opposite ends of each lake.

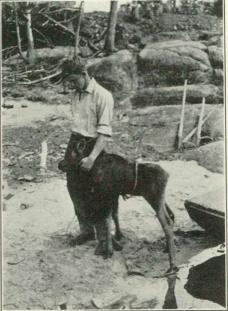

Throughout the season the transportation of supplies, equipment, and men was handled principally by the launches and canoes of the party. The tramways of a fishing company were of assistance in moving the camp outfit around Loon Rapids and across the portage from Loon Lake to Lac LaCroix.

On July 23 the commissioners, Dr. W. F. King and Mr. E. C. Barnard, visited the main camp and inspected the work from

By October 23 the major triangulation had been completed to stations "Village" and "Ely" east of the outlet of Lac LaCroix; the minor triangulation and topographic mapping had been completed as far as the island in Lac LaCroix on which reference monument 549 is located. Work on Lac LaCroix was then suspended, and the party started back toward Kettle Falls by way of the portage from Lac LaCroix into Loon Lake, attending to some unfinished surveying operations on the way. Arriving at Kettle Falls on October 30, the party hauled out the boats and launches, stored the camp equipment, and disbanded.

Kettle Falls to Lac LaCroix.

The personnel of the Canadian party for the season of 1915 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistants, F. P. Steers, D. L. S., H. M. Barton, D. L. S., G. T. Prinsep,

A guest of the Canadian party during part of the season of 1915

J. M. Sheppard, G. E. Wait, A. Wilkins, J. A. Snow, and J. M. Perrier; and 18 hands.

## UNITED STATES PARTY ON CROOKED LAKE, BASSWOOD RIVER, BASSWOOD LAKE, AND KNIFE LAKE

The United States party assembled at Winton, Minn., where they had stored their outfit at the end of the season of 1914, and after overhauling and repairing the equipment and canoes they moved to Basswood River, where field work was begun on June 7.

The major scheme of triangulation, which in 1914 had been extended from the eastern end of Basswood Lake to the middle of Crooked Lake, was continued to the western end of Crooked Lake to stations "Curtain" and "Falls," to which the triangulation on Lac LaCroix then being done by the Canadian party would be connected. The major scheme of triangulation was then extended to the eastward

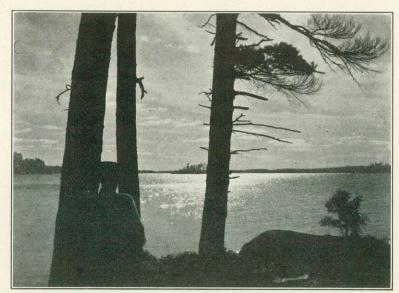

from the line "Echo-Fang" near the eastern end of Basswood Lake and tied to the line "Dorothy-Saunders" of the first-order triangulation of the Geodetic Survey of Canada. Minor triangulation was extended along the narrow part of Basswood River from Basswood Falls to the falls at the head of Crooked Lake and also along the boundary through the narrow part of Basswood Lake. Near

Portaging equipment of United States party from Sucker Lake to Basswood Lake

the end of the season some minor triangulation was also done to complete the control on Knife Lake.

The topographic surveys of the terrain along the boundary waterways of Basswood Lake, Basswood River, and Crooked Lake were completed during this season. The topography of the shores of the larger boundary waterways was mapped with plane table and stadia on a scale of 1:20,000, contour interval 10 feet. Curtain Falls and Basswood Falls and the other narrow waterways were mapped on a scale of 1:5,000, contour interval 5 feet. Vertical control for the topographic mapping was based on bench marks of the Duluth & Iron Range Railroad at Winton, Minn. Spirit levels were run in closed circuits from these bench marks to Fall Lake, thence to Basswood Lake, and also across all the portages between the boundary lakes as far westward as Lac LaCroix. The elevations were

carried across the lakes by making simultaneous readings of the water surface on staff gages which were placed at opposite ends of each lake. Vertical control was also obtained by vertical-angle determination of the elevations of the triangulation stations of the scheme of control. Permanent bench marks were established on Basswood Lake, Basswood River, Crooked Lake, Iron Lake, and Lac LaCroix.

Stretch of boundary waters in Basswood Lake

## SEASON OF 1915-CROOKED LAKE AND BASSWOOD LAKE

The transportation of supplies from Winton, Minn., to the survey camps on Crooked Lake and Basswood Lake was carried on, as in the previous season, by the launches of a fishing company. The launches of the fishing company were also used in moving camp. Canoes propelled by outboard motors were used by the surveyors for transportation between camp and the localities of their work.

The topographic mapping and the triangulation were completed on October 30, and the spirit leveling was completed early in November. A cabin was then built on the shore of the southeastern arm of Basswood Lake to house a small party which would return to the field to measure a base line on the ice on Basswood Lake some time during the winter.

The party then stored the canoes at Hoist Portage on Basswood Lake, and their equipment at Winton, Minn., and disbanded.

The personnel of the United States party during the season of 1915 was as follows: Chief of party, W. B. Fairfield; assistants, E. R. Martin, J. J. Phelan, J. J. Charters, H. C. Corrigan, and W. C. Bastian; and 15 hands.

#### MEASUREMENT OF BASE LINE ON BASSWOOD LAKE

About January 1, 1916, the chief of the above party, which had been operating in 1915, returned to the field from Washington and measured a 3,788-meter

base line on the ice, across the southeastern arm of Basswood Lake between stations "Had" and "Garb," which had been tied to both the major and minor schemes of triangulation the previous fall.

An early snowfall of unusual depth had prevented the formation of ice thick enough to support the weight of sleds and horses; for this reason it was necessary for the men to haul the basemeasuring outfit and

United States base-measuring party en route to camp on Basswood Lake, January, 1916

equipment on toboggans from Hoist Portage across the various waterways to the cabin which had been built the previous fall.

The line between stations "Garb" and "Had" was cleared of snow in order that the base measurement could be made with the tape supported throughout its length flat on the ice. Wetted boards were then placed at 50-meter intervals along the line and were allowed to freeze fast to the ice. The measurement of the base was then made by marking the tape lengths on copper strips attached to these boards. The line was measured three times with 50-meter invar tapes under a tension of 15 kilograms, at a mean temperature of 11° Fahrenheit.

96039-31-6

The personnel of the base-measurement party on Basswood Lake, winter of 1915–16, was as follows: Chief of party, W. B. Fairfield; assistant, E. R. Martin; and six hands.

# SEASON OF 1916—THE BOUNDARY FROM LAC LACROIX TO NORTH LAKE

In 1916 the Canadian party which had operated on Lac LaCroix the previous year continued their work eastward to the western end of Crooked Lake, where a junction was made with the work done by the United States party in 1915, thereby completing the continuity of the survey from Lake of the Woods to Lake Superior. A United States party in 1916 monumented the boundary from Curtain Falls at the western end of Crooked Lake eastward to Cypress Lake and did the contouring necessary to complete the topographic mapping of the terrain along the boundary waterways from Carp Lake eastward to North Lake.

## CANADIAN PARTY ON LAC LACROIX AND IRON LAKE

The Canadian party assembled at Kettle Falls late in May and went to the locality on Lac LaCroix where the work of the previous season had been discontinued; they established camp on the north end of Coleman Island.

A topographic survey was made of the eastern part of Lac LaCroix, Bottle River, and Iron Lake. The mapping of the islands and the strip of terrain along the shores of the mainland was done on a scale of 1:20,000, contour interval 10 feet. The survey of Bottle River, the narrow boundary waterway connecting Lac LaCroix with Iron Lake, was made on a scale of 1:5,000, contour interval 5 feet. The line of levels, which had been started the previous season at a bench mark on Namakan Lake, was carried across Lac LaCroix by water levels, and the line was closed on a bench mark which had been established by the United States party in 1915 on an island near the western end of Bottle Portage.

The major and minor schemes of triangulation were carried eastward along Lac LaCroix and Iron Lake to Curtain Falls at the western end of Crooked Lake. Here the major scheme was tied to the major triangulation done by the United States party in 1915 at stations "Curtain" and "Falls," and the minor schemes were connected at reference monuments 656 and 657.

Boundary reference monuments, Nos. 482 to 655, of the type shown on page 91 were set to reference the boundary from Lac LaCroix to Curtain Falls.

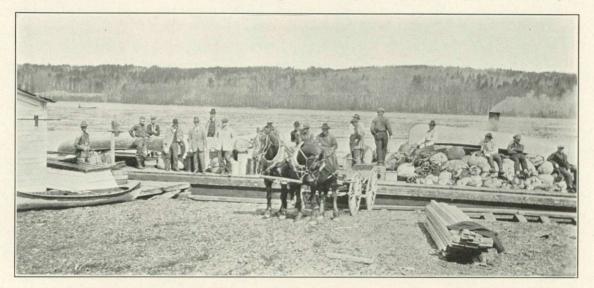

With the close of the season's operations, late in September, the principal part of the work assigned to the Canadian party on the boundary from Lake of the Woods to Lake Superior was completed. The party, therefore, upon their return to Kettle Falls, disposed of much of the camp outfit and all of their boat equipment except two launches, which were reserved for future inspection work.

The personnel of the Canadian party in 1916 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistants, G. T. Prinsep, J. M. Sheppard, J. Q. Coughlan, J. A. Snow, G. O. Rochester, and J. M. Perrier; and nine hands.

## UNITED STATES PARTY, CROOKED LAKE TO NORTH LAKE

A large United States party, equipped to do monumenting and topographic mapping, assembled at Winton, Minn., on May 22 and shortly thereafter moved to the vicinity of the international boundary at Hoist Portage on Basswood Lake. Two independent parties were then organized—a topographic party, which began work eastward from Carp Lake, making a more complete topographic survey \* of the terrain along the shores of the boundary waterways, and a monumenting party, which started eastward from Curtain Falls on the work of setting the boundary reference monuments.

The topographic party, consisting of four plane-table men with their assistants and several hands, established their first camp at Prairie Portage at the eastern end of Basswood Lake. As the season progressed they occupied camps successively on

United States party loading camp outfit, Winton, Minn., at beginning of season of 1916

Knife Lake, Cypress Lake, Saganaga Lake, Pine Portage and finally at Little Gunflint Lake, completing the topographic mapping as far as Height-of-Land Portage between North Lake and South Lake.

The topographic mapping was done with plane table, telescopic alidade, and stadia supplemented in the more densely wooded areas by paraffined string tapes and aneroid barometers. In general the mapping was done on a field scale of 1:20,000, contour interval 10 feet. The mapping of Swamp Portage and most of the narrow boundary channels was done on a scale of 1:5,000, contour interval 5 feet. The outlet of Swamp Lake was mapped on a scale of 1:2,500, contour interval 5 feet. For the vertical control of the topographic mapping, spirit levels were run in closed circuits from one lake to the next, and the elevations were carried across the lakes by making simultaneous readings of the water surface on staff gages placed at opposite ends of each lake.

\*This additional topographic work consisted of adding contours to the shore-line maps which had been made previous to 1913, when the commissioners decided that all the boundary maps should include, in addition to the shore line, a contoured strip of terrain along the boundary waterways. See p. 29.

monumenting The party established their first camp on Basswood River near Crooked Lake. After setting reference monuments in this vicinity they then camped on Crooked Lake about 6 miles east of Curtain Falls, and after completing the monumenting as far west as that point they returned to Basswood Lake and camped at Prairie Portage. Thence they progressed eastward, camping on Knife Lake

United States party at Swamp Portage, returning to Winton, Minn., at close of season, 1916

and later on Cypress Lake and completing the monumenting that season as far as Cypress Lake.

From Curtain Falls to the western end of Cypress Lake 258 standard 8-inch manganese-bronze posts of the type shown on page 91 were set in ledge rock on the shores of the boundary waterways to reference the turning points of the boundary line. The reference monuments were set generally at points which had already been determined by triangulation; a few, however, were placed at points whose positions had to be determined from the nearest triangulation stations at the time the monuments were set. On Swamp Portage three large aluminum-bronze monuments of

United States party moving camp, Basswood Lake, 1916

the types shown on page 90 were erected to mark the land portion of the line from Cypress Lake to Swamp Lake. This part of the line was also marked by a 20-foot vista cleared through the forest growth between the two lakes.

An inspection of this portion of the boundary line was made in September by the United States commissioner, Mr. E. C. Barnard.

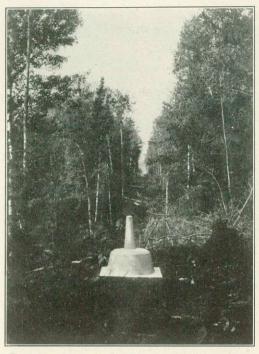

The field work of both parties was discontinued about the middle of October. The topographic outfit was stored for the winter at the eastern end of Gunflint Lake, and the party left the field by way of North Lake railroad station. The monumenting party, which had not progressed so far eastward, departed by way of Winton, Minn.

The personnel of the United States party in 1916 was as follows: Chief of party, J. J. Phelan; assistants, R. K. Lynt, E. R. Martin, J. J. Charters, D. W. Eaton, W. C. Bastian, and G. C. Phillips; and 24 hands.

## SEASON OF 1917—CONTROL TRIANGULATION AND REPAIR OF MONU-MENTS, LAKE OF THE WOODS AND RAINY RIVER; TRIANGULA-TION, MONUMENTING, AND MAPPING, CYPRESS LAKE TO LAKE SUPERIOR

By the end of the season of 1916 the original program of the commissioners for the surveying and mapping of the boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior had been completed by the several surveying parties of the two sections of the commission. Before the original program was completed, however, it had become apparent, as the reader has observed, that certain other field work not originally planned was necessary before the commissioners could lay down the final boundary on the official maps and, by the determination of the geodetic coordinates of the turning points of the line, accurately describe its course. Part of this work could be done satisfactorily only after the mapping of the outlines of the boundary waterways had been completed; other steps toward the final completion of the demarcation of the line depended upon first-order control surveys which were not available during the earlier years of the work.

The surveys made in 1917 and subsequent years were therefore directed to this work of completion. They included the following: Completing the mapping of the contours along the boundary waterways in accordance with the commissioners' decision, made in 1913, that all the boundary maps should be completely contoured; setting the remaining reference monuments on certain parts of the line where the selection of the monument sites had been deferred until the topographic surveys were completed and the commissioners had determined the location of the boundary turning points; rechecking in the field the location of the turning points in the more narrow waterways to make certain that each course of the boundary line had been laid down in its proper place; and tying the boundary triangulation to the arc of firstorder geodetic control, along the boundary from Lake Superior to Lake of the Woods, which was completed in 1924 by the United States Coast and Geodetic Survey and the Geodetic Survey of Canada as a part of the major network of first-order geodetic control of the two countries.

Boundary monument No. 8; Watap Portage, between Watap Lake and Mountain Lake

Engaged upon these miscellaneous surveys in 1917 were two United States parties and one Canadian party. One of the United States parties, continuing operations of the previous season, mapped the contours, necessary to complete the boundary maps from North Lake to Lake Superior, and set boundary reference monuments along the line from Cypress Lake to South Fowl Lake. The other United States party did some first-order triangulation on Lake of the Woods and during the latter part of the season tied part of the boundary triangulation—that from Gunflint Lake to Mountain Lake-to the first-order triangulation done in this region by the Geodetic Survey of Canada. A small Canadian party inspected and repaired monuments on Lake of the Woods and Rainy River. These parties in 1917 completed approximately one-half of the additional work that had been deemed necessary for the final demarcation of the line.

## UNITED STATES TOPOGRAPHIC AND MONUMENTING PARTY, CYPRESS LAKE TO LAKE Superior

The topographic and monumenting party, as in the previous season, was organized in two independent sections—one to do the topographic mapping, the other to set the reference monuments. The work of both sections of the party was a continuation of similar activities begun by them in 1916.

The topographic section of the party assembled at North Lake, Ontario, about May 25 and moved to Rose Lake, where they established camp. The mapping of the contours was resumed at North Lake, where it had been discontinued in 1916, and was carried eastward to Lake Superior, thus completing all the additional topographic work necessary for the preparation of the boundary maps.

The monumenting section of the party established camp late in May near Swamp Por-

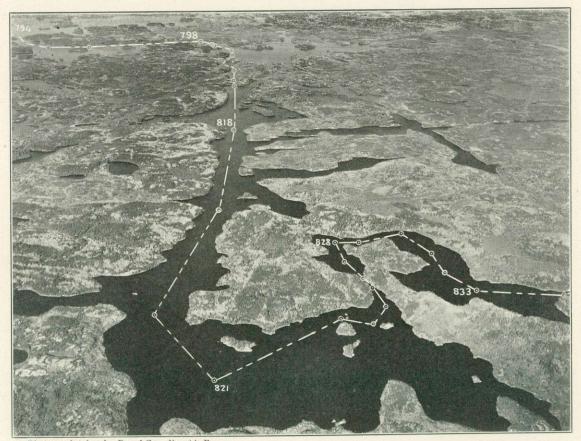

Height-of-Land Portage, between North Lake and South Lake; crest of watershed between Lake of the Woods and Lake Superior

tage and continued the setting of the reference monuments from Cypress Lake eastward to South Fowl Lake.

The field work was similar in all respects to that of the previous season. The topography of the lakes was mapped on a 1:20,000 scale with a contour interval of 10 feet; and the portages, Pigeon River, and other narrow boundary streams were mapped on a 1:5,000 scale with a contour interval of 5 feet.

A continuous line of levels was carried along the boundary, by spirit levels across the portages and by simultaneous readings of water gages on the lakes. The spirit levels which were run along Pigeon River were finally closed on the water surface of Lake Superior, the elevation of which was obtained from data furnished by the United States Army Engineers and the Hydrographic Survey of Canada.

Standard 8-inch manganese-bronze posts were set as reference monuments, some at points that had been determined by triangulation in previous field seasons and some at new locations. The new points were tied to the old triangulation. Conical aluminum-bronze monuments with rounded tops, standing about 3 feet above the surface of the ground, were set in concrete bases to mark the land boundary on Height-of-Land and Watap Portages. The relative positions of the three monuments on each of the land boundaries were determined by tape traverses which were tied to the triangulation. Along the boundary line on Height-of-Land

Photograph taken by Royal Canadian Air Force Looking northward on Maraboeuf Lake; part of Saganaga Lake in the background

and Watap Portages a vista having a 20-foot sky line was opened through the trees and brush.

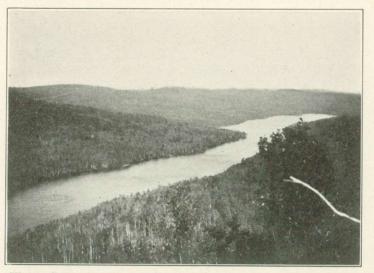

The work was inspected by the United States commissioner, Mr. E. C. Barnard, on July 19 and 20.

By the last week in October the monumenting was completed as far as the north end of South Fowl Lake, and, as the weather was unfavorable, this work was discontinued and the equipment of the monumenting party was stored at one of the camps of the Pigeon River Lumber Co. The topographic mapping, however, being almost completed, was continued until Lake Superior was reached. On November 8 the outfit of the topographic party was stored at Grand Portage, Minn., on Lake Superior, and the party disbanded.

The personnel of the United States topographic and monumenting party in 1917 was as follows: Chief of party, J. J. Phelan; assistants, R. K. Lynt, E. R. Martin, J. J. Charters, C. E. Carl, G. C. Phillips, P. W. Huddleston, C. L. Dunklee, and P. H. Dunklee; and 31 hands.

## UNITED STATES TRIANGULATION PARTY ON LAKE OF THE WOODS AND ON THE BOUNDARY FROM GUNFLINT LAKE TO MOUNTAIN LAKE

The United States triangulation party assembled at Warroad, Minn., during the first week in May and began work on a scheme of first-order triangulation on

Watap Lake, looking northeastward from triangulation station "Best"

Lake of the Woods. Starting at the Warroad base line near the western shore of the lake, the work was carried eastward across the lake and terminated at the mouth of Rainy River.

About May 15, immediately after the ice on Lake of the Woods had broken up, the 40-foot launch *I*. *B*. *S*., owned by the Canadian section of the commission, was sent from Fort Frances, Ontario, to Warroad with a crew of three men, to take part in the work. With this launch and a small barge, lumber was distributed to eight

triangulation stations, at which towers were built of an average height of 50 feet. The observing of the triangulation was done with a 12-inch direction theodolite, the pointings being made either on signal lights at night or on heliotropes. The triangulation was connected to the line "Mass-Target" of the triangulation done by the Canadian party in 1912 on the northern part of Lake of the Woods and to the line "Ben-Reference monument 55" of the triangulation done by the Canadian party in 1913 on Rainy River.

The work was inspected in June by the Canadian commissioner, Mr. J. J. McArthur, D. L. S.

The work on Lake of the Woods was completed on August 14. The party then moved by rail to North Lake, Ontario, and began work on triangulation to tie the boundary scheme of triangulation to the first-order control that had been begun westward from Lake Superior in 1911 by the Geodetic Survey of Canada.

This work was begun at the western end of Gunflint Lake and was carried eastward along the boundary to Mountain Lake. During its progress four connections were made to the boundary triangulation—one at the west end of Gunflint Lake, one on South Lake, one on Rose Lake, and one on Watap Lake.

The horizontal angles were measured with the accuracy required for thirdorder triangulation. Each angle was measured with a  $6\frac{1}{4}$ -inch Berger theodolite by the method of repetitions, six repetitions with telescope in direct position and six repetitions with telescope reversed.

For transportation on the lakes, one small canoe and two Peterborough canoes propelled by gasoline motors were used. When camp was moved, considerable back-packing had to be done over the portages from one lake to the next.

By the last week in September the work had progressed as far as Mountain Lake and the party was camped on Lily Lakes Portage. A long period of rain, snow, and weather unfavorable for observing then set in and for the next two weeks the party did only reconnaissance and signal building. On October 8 the party moved to the portage between Moose Lake and North Fowl Lake, the last camp of the season. On October 21 a sudden cold snap covered the shallow lakes with ice an inch thick and closed navigation by canoe on the North and South Fowl Lakes. The party was thus cut off from the Pigeon River wagon road and from their base of supplies. They were also prevented from transporting their outfit to the intended winter storage quarters at Grand Portage, Minn. Accordingly, they left the canoes, engines, tools, and cooking outfit at a cache built in the woods near their last camp and back-packed the instruments, tents, and bedding 18 miles by the tote road to the Canadian Northern Railway at Whitefish Lake, from which point they took the train to Port Arthur, Ontario. There they stored the outfit and on November 1 the party disbanded.

The personnel of the United States triangulation party for 1917 was as follows: Chief of party, Jesse Hill; assistants, J. J. Bachtel and J. E. Bump; and 10 hands.

## CANADIAN PARTY ON LAKE OF THE WOODS AND RAINY RIVER

The only work done by the Canadian section of the commission on this section of the boundary in 1917 was the inspection and repair of some of the boundary reference monuments which had been set by the Canadian party on Lake of the Woods and on Rainy River in 1912 and 1913, and the making of some additional topographic surveys along Rainy River from Baudette, Minn., to Lake of the Woods.

A small party, which was detached from a larger Canadian party operating elsewhere on the international boundary line that season, went to Lake of the Woods and during the period from June 5 to June 21 inspected the monuments from

74

Baudette northward to Northwest Angle Inlet. It was found that some of the monuments had been washed out by the unusually high water of the previous spring<sup>\*</sup> and others required repairs. One of the monuments, reference monument 22, which was found to be a menace to navigation at high water, was blown out. No other monument was erected in its stead, as the boundary was considered to be sufficiently well referenced without it.

The work of resetting the damaged monuments and locating them in their new positions and making the additional topographic surveys was done later by the party during the month of September. The monuments which had been washed out or undermined by high water were reset at new and more protected sites, and their new geographic positions were determined by tying them in to the nearest boundary triangulation stations. Others which had been heaved by the frost or otherwise damaged were reset in more substantial concrete bases. The topographic surveys consisted of some minor mapping necessary to complete the surveys previously made along Rainy River, such as traversing roads, locating new houses, and determining the elevations of the newly located reference monuments.

The personnel of the Canadian party in 1917 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistants, James Bowie and S. G. Lindsay; and two hands.

## SEASON OF 1918—INSPECTION OF MONUMENTS, LAKE OF THE WOODS, RAINY RIVER, NAMAKAN LAKE, SAND POINT LAKE, AND LOON RIVER; CONTROL TRIANGULATION AND MONUMENTING, MOUN-TAIN LAKE, MOOSE, NORTH FOWL, AND SOUTH FOWL LAKES, AND PIGEON RIVER

In 1918 a United States party completed the monumenting of the boundary line from the northern end of South Fowl Lake to the mouth of Pigeon River and made the surveys necessary to tie the boundary triangulation and traverse from Mountain Lake to Lake Superior to the first-order triangulation of the Geodetic Survey of Canada that had been done in the years 1911 to 1916 as part of the general scheme of first-order geodetic control. A small Canadian party inspected the boundary reference monuments which had been set by the Canadian parties on Lake of the Woods in 1912 and 1913 and on Namakan Lake and the adjacent boundary waterways in 1915.

#### UNITED STATES PARTY, MOUNTAIN LAKE TO LAKE SUPERIOR

The United States party went to the field early in June, and after overhauling the outfit, which had been stored at the close of work in 1917, part at Port Arthur, Ontario, and part at Grand Portage, Minn., established camp at the mouth of Pigeon River.

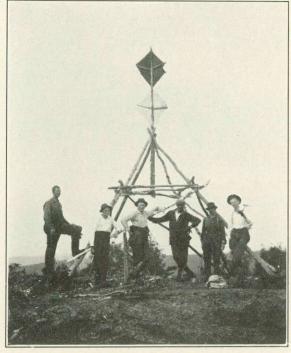

Work was immediately begun on major triangulation for the control of the stadia traverse along Pigeon River and of the minor triangulation done in 1910 along South Fowl Lake, North Fowl, Moose, and Mountain Lakes. This control triangulation was based on four of the stations of the first-order triangulation of the Geodetic

<sup>\*</sup> See account of flood of 1916, Report of consulting engineers to International Joint Commission, on Lake of the Woods Levels, 1917, pp. 233 to 235.

Survey of Canada. The major triangulation done in 1918 was tied to seven stations of the Pigeon River traverse and to stations of the boundary triangulation on South Fowl Lake, Moose Lake, and Mountain Lake.

Bronze-post monuments of the type shown on page 91 were set along the shores of Pigeon River and South Fowl Lake to reference the turning points of the boundary line. They were set generally in holes drilled in ledge rock, but at sites at which no ledge rock was found they were set in concrete bases 12 inches square resting on a solid foundation below the frost line.

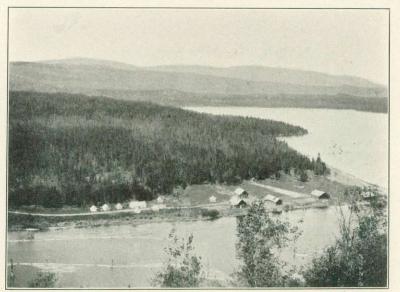

To preclude any possible difficulty in tracing the actual course of the boundary line between some of the islands in Pigeon River, bronze disks of the type shown on page 92 were set on nine of the largest islands in the river below High Falls to

United States triangulation party at station ''Best,'' 1917

indicate, by a system of lettering, the nationality of each of these islands. The islands on which were set the disks stamped B, C, F, G, and I are in Canada; and those bearing the disks stamped A, D, E, and H are in the United States. The geographic positions of these disks were determined by triangulation in the same way as were the boundary reference monuments.

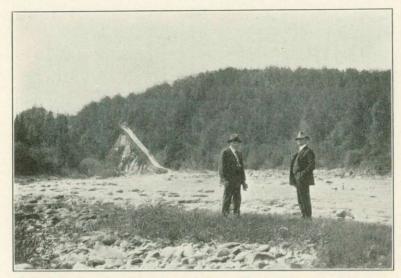

In June of 1918 a joint inspection was made of this section of the boundary line by the United States commissioner, Mr. E. C. Barnard, and the Canadian com-

Camp of United States party at Pigeon River Lumber Co.'s camp, mouth of Pigeon River, 1918

missioner, Mr. J. J. McArthur, D. L. S.

The work was finished early in September. As most of the field work on the boundary from Lake of the Woods to Lake Superior was now completed, except for some minor surveys and the inspection and repair of monuments, the canoes were sold, and the tents and instruments were shipped east for use on the surveys of the boundary along the St. Croix River and Passamaquoddy Bay.

United States Boundary Commissioner E. C. Barnard (left) and Canadian Boundary Commissioner J. J. McArthur inspecting boundary work on Pigeon River, 1918

Before leaving the field the chief of party made an inspection of the boundary reference monuments set in 1914 along Rainy River from Ranier, Minn., to Baudette, Minn. Three monuments which had been destroyed were reset on more protected sites, and their geographic positions were determined by tying them to stations of the boundary triangulation.

The personnel of the United States party for 1918 was as follows: Chief of

party, Jesse Hill; assistants, E. R. Martin, R. K. Lynt, J. E. Bump, and S. G. Lindsay; and 11 hands.

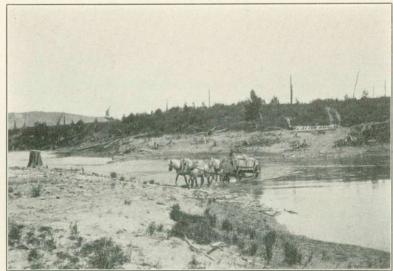

# CANADIAN INSPECTION PARTY ON LAKE OF THE WOODS, RAINY RIVER, NAMAKAN LAKE, SAND POINT LAKE, AND LOON RIVER

In June a small Canadian party again went to Lake of the Woods and inspected and repaired a number of the reference monuments. They also checked the location of the boundary line in the vicinity of Brush Island to make sure that it had been properly located close to the shore of the island, as shown on the original boundary maps.

Next, the monuments on Namakan Lake, Sand Point Lake, and Loon River, which had been set by the Canadian party in 1915, were inspected and numbered.

Early in September the monuments on Rainy River north of Baudette, Minn., were inspected to find out whether any damage had been done to them during the previous year by high water. The monuments were found in good condition.

The personnel of the Canadian party in 1918 was as follows: Chief of party, J. J. McArthur, D. L. S.; assistant, S. G. Lindsay; and one hand.

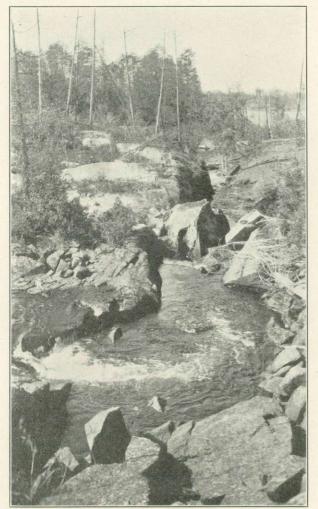

Transporting monumenting materials on lower part of Pigeon River, 1918

## COMPLETION OF FIELD OPERATIONS—MISCELLANEOUS SURVEYS MADE IN 1921, 1922, 1925, AND 1926

The field work done after 1918 consisted only of some minor surveys and monumenting necessary for the final completion of the demarcation and definition of the boundary line as set forth and certified in the commissioners' final report.

After the topographic maps had been completed and the commissioners had laid down the course of the boundary line thereon and had given each turning

way is only a few feet wide

A narrow place in Pine River, where the boundary wateror repair certain of the monuments and do some additional surveying. In 1921 a small United States party inspected the monuments along Rainy River between Baudette and Birchdale, Minn., and repaired or rebuilt those that had been damaged or destroyed by high water. After the completion of this work on June 8 the party moved to Port Arthur, Ontario, where a party, made up of members of both sections of the commission, was organized for the purpose of making a careful field location of the boundary line through the narrow waterways in the region between Namakan Lake and the head of Pigeon River.

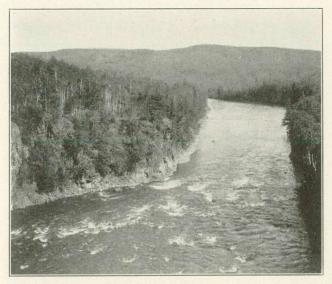

On June 15 this joint party moved by rail to North Lake, where they made their first camp and began running out the boundary line, working eastward. Each

point a definite geographic position, it was necessary to determine in the field the precise location of the boundary turning points in the very narrow waterways in order to make certain that each course of the boundary fell in its proper place. Also, after the first-order geodetic control had been established through that region jointly by the Geodetic Survey of Canada and the United States Coast and Geodetic Survev in 1924, it was necessary to tie the boundary triangulation to this control in order that the geographic positions of the boundary reference monuments and of the turning points of the boundarv line could be computed and set forth in the commissioners' report in terms of the North American datum of 1927, a geodetic datum common to both countries. Furthermore, during the period since the original monumenting was done on Rainy River and in Northwest Angle Inlet, unusually high water had not only destroyed some of the monuments but also had changed the contour of the shore line at places, making it necessary to reset

boundary turning point in the narrow waterways was located by determining its direction and distance from the nearest boundary reference monument or from the nearest station of a traverse run for this purpose from one boundary reference monument to the next.

On July 2 the work was finished as far as South Fowl Lake, and the party then returned to North Lake. The boundary location was continued westward from North Lake to Squirrel Narrows in Namakan Lake, thereby completing the work of this character in that vicinity. The party then moved to Ranier, Minn., where on September 18 they disbanded.

In 1922 a Canadian party made a field location of the boundary in Northwest Angle Inlet, inspected the monuments in that vicinity and on Rainy River below Baudette, Minn., and repaired or reset and relocated those that had been damaged

Looking down Pigeon River from Scott Highway bridge

or were in danger of being destroyed by high water.

The work was inspected in June by the Canadian commissioner, Mr. J. J. McArthur, D. L. S., and by Mr. James H. Van Wagenen, engineer to the United States section of the commission.

As a result of cooperative arrangements between the International Boundary Commission and the United States Coast and Geodetic Survey and the Geodetic Survey of Canada, as referred to elsewhere herein, the arc of first-order triangulation and traverse to be done jointly by these two governmental

agencies from Lake Superior westward along the boundary to Lake of the Woods and thence along the forty-ninth parallel to Red River was completed in 1924. This made available along this section of the international boundary line the firstorder control which was to become a part of the continental arc of first-order triangulation necessary for the establishment of the new geodetic datum later to be known as the North American datum of 1927. As the commissioners had decided to describe and certify the course of the boundary line in terms of the geographic positions of all the boundary turning points and to publish in their report the geographic positions of all triangulation stations and monuments as coordinates of this new datum, a joint party was sent to the field in 1925 to properly tie this firstorder control to the boundary triangulation.

The party, which consisted of an engineer from each section of the commission and several hands, went to the field on June 5 and did the triangulation and traverse necessary to make connections between the boundary triangulation and the first-order control traverse along Rainy River, Rainy Lake, and Namakan Lake. Eastward of Namakan Lake adequate ties had already been made between the

boundary triangulation and the first-order control, so that as soon as the party reached the eastern end of Namakan Lake their work was completed. The party disbanded at International Falls, Minn., on July 3.

A small United States party in 1926 made a final inspection of the boundary reference monuments from International Falls, Minn., to Loman, Minn., where trouble had heretofore been occasioned by high water. During the course of this work the party also measured with invar tape several lines of the minor triangulation along the river to strengthen the scheme of long, narrow quadrilaterals, which necessarily had to be used for the minor control of this part of the boundary.

The work on Rainy River was inspected in June by Mr. J. A. Pounder, D. L. S., engineer to the Canadian section of the commission.

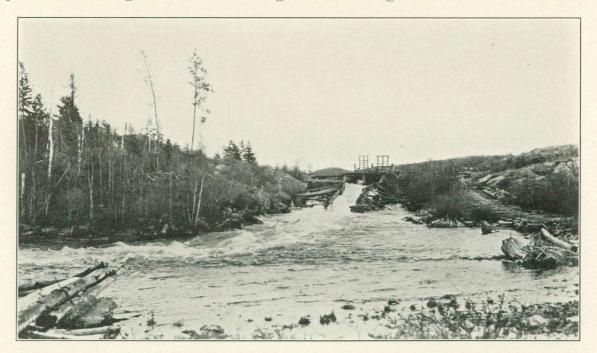

The personnel of the several small field parties from 1921 to 1926 was as follows:

For His Britannic Majesty: Chief of party, G. T. Prinsep, D. L. S.; assistant, T. P. Reilly; and two hands.

For the United States: Chief of party, Jesse Hill; assistant, J. J. Bachtel; and two hands.

A recapitulation of the foregoing work of the surveyors of the International Boundary Commission engaged on the demarcation of the boundary from Lake of the Woods to Lake Superior, shows: That 1,382 monuments were set to mark the 426 miles of boundary line; that approximately 5,100 geodetic positions were determined by triangulation or traverse; and that 1,740 square miles of terrain along the boundary were topographically surveyed for the 36 joint boundary maps.

The results of this work by the boundary commission, aside from their necessary value in carrying out the provisions of Article V of the treaty of 1908, have proved to be of great value to other governmental agencies of the two countries.

The short boundary stream flowing from Sucker Lake to Basswood Lake

The results of the surveys—the maps and control data—have been furnished to the Dominion Water Power and Reclamation Service of the Department of the Interior of Canada and to the Corps of Engineers, United States Army, and incorporated in comprehensive surveys that were made by those organizations for the International Joint Commission. Data have also been furnished to the Corps of Engineers for the control of their hydrographic survey of Lake of the Woods. The maps and geodetic data of the International Boundary Commission have been furnished from time to time to many local surveyors and engineers.

During the period in which the surveys of the boundary from Lake of the Woods to Lake Superior were being made, similar operations were being carried on by field parties of the boundary commission on the other sections of the boundary—in Passamaquoddy Bay and the St. Croix River; from the source of the St. Croix River to the St. Lawrence River; along the forty-ninth parallel; through Georgia, Haro, and Juan de Fuca Straits; and on the boundary between Alaska and Canada. The personnel of the commission available from year to year for work on the boundary from Lake of the Woods to Lake Superior was therefore limited, being dependent upon the necessity for survey work on the other sections of the boundary line.

The size of the field parties and the localities in which they operated are shown in the following chronological summary.

|        | Location of work  | Section of com- | Per-<br>son- | Work in charge of               |   | Chiefs of I                                   | Chiefs of parties and assistants engaged on-   | aged on-      |  |

## SUMMARY OF PERSONNEL

# DESCRIPTION OF FIELD AND OFFICE METHODS AND RESULTS

## HORIZONTAL CONTROL

The horizontal control for the topographic surveys <sup>1</sup> and for the determination of the geographic positions of the monuments and turning points of the boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior consists of schemes of major and minor triangulation which are in turn controlled by part of a continental scheme of first-order triangulation and traverse by the United States Coast and Geodetic Survey and by the Geodetic Survey of Canada, which extends from Lake Superior to the Pacific Ocean.

The general plan of control is shown on 40 triangulation and traverse sketches which accompany the report under a separate cover.

The geographic positions and descriptions of the triangulation and traverse stations are listed in Appendix V, pages 228 to 585.

Measuring base line on the ice on Basswood Lake, February, 1916

<sup>1</sup> Topography, p. 95. (Detailed control.) 84

The first-order control is part of a loop approximately 1,000 miles in length, that is made up of the following units of first-order triangulation and first-order traverse: From a point on the international boundary, at its intersection with the United States Coast and Geodetic Survey's ninety-eighth meridian scheme of triangulation, to Warroad, Minn., the control consists of traverse done by the Geodetic Survey of Canada; from Warroad to Namakan Lake, of traverse by the United States Coast and Geodetic Survey; from Namakan Lake to Basswood Lake, of triangulation by the United States Coast and Geodetic Survey; from Basswood Lake by the way of Pigeon River to Isle Roval in Lake Superior, of triangulation by the Geodetic Survey of Canada; from Isle Royal to Duluth, Minn., of triangulation by the United States Lake Survey; from Duluth to the intersection of the North Dakota, South Dakota, and Minnesota State boundaries and thence north along the ninety-eighth meridian scheme of triangulation to the international boundary, of triangulation by the United States Coast and Geodetic Survey.

The discrepancy in the closure of this loop of first-order triangulation and traverse was 0".256 of latitude and  $0^{\prime\prime}.472$  of longitude, equivalent to 12.5 This discrepancy represents a proportional meters. error of 1 part in 130,000. It was distributed throughout the loop as follows: 0".044 of latitude and 0".184 of longitude in the traverse from the ninety-eighth meridian to Namakan Lake; and 0".102 of latitude and 0".198 of longitude in the triangulation from Namakan Lake to the mouth of Pigeon River. The remainder, 0".110 of latitude and 0".090 of longitude, was distributed throughout the triangulation of the United States Lake Survey and of the United States Coast and Geodetic Survey.

The wide part of Lake of the Woods, through which the boundary passes, is covered by first-order triangulation, which is tied at Warroad, Minn., to the first-order traverse. From this first-order triangulation, a minor scheme extends to the head of North-

Triangulator at work at station "Big Island," Rainy Lake, 1913

Type of signal used on minor triangulation, Lake of the Woods and Rainy Lake

west Angle Inlet, where it is tied to an invar-tape traverse which was run along the meridian boundary from the Northwesternmost Point of Lake of the Woods to Buffalo Bay to determine the geographic positions of the monuments. This traverse is tied at its southern end to the first-order triangulation of Lake of the Woods.

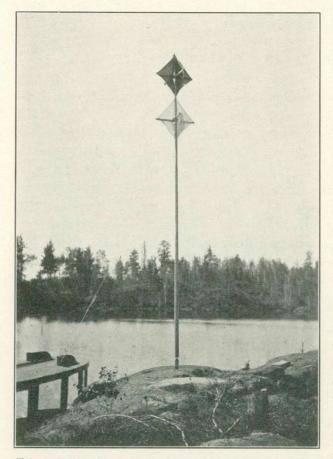

The sites for the triangulation stations along Northwest Angle Inlet were so chosen that they would be suitable for monuments to reference the turning points of the boundary. Along the narrow part of the inlet, a field location of the boundary was made, during which the position of each turning point of the line was determined by measuring the direction and distance from the nearest monument or by measuring directions from two near-by monuments. This method of determining in the field the positions of the turning points from monuments or traverse stations was also used on other parts of the boundary wherever the waterway was extremely narrow.

Through the wide part of Lake of the Woods and, in general, through the larger waterways, the reference monuments were set at stations of the

minor scheme of triangulation, and were, where practicable, set in pairs near each turning point, one on each side of the boundary. Wherever possible, the monuments were so placed that they and the turning point would lie in the same straight line.

Rainy River, the boundary stream connecting Rainy Lake with Lake of the Woods, is covered by a scheme of major triangulation controlled by the United States Coast and Geodetic Survey's first-order traverse to which it is tied at five points. Immediately adjacent to the river banks there is a scheme of minor triangulation, tied to the major triangulation at 11 points. This minor scheme was extended the entire length of the river, the stations being placed near the river for the purpose of determining the positions of the boundary reference monuments and also in order to furnish the topographers with numerous control points at locations most convenient for the mapping. From Baudette, Minn., to Birchdale Landing, Minn., this minor scheme was carried along the river as a chain of single triangles. In this chain there were 183 triangles and 12 base lines. The average triangle closure was 4".0 and the average length closure between bases was 1 part in 15,000.

On Rainy Lake the principal control is the first-order traverse of the United States Coast and Geodetic Survey, the stations of which are located on the shores of the mainland or on islands. The angles of this traverse were measured during

Triangulation signal centered over bronze-post boundary reference monument; Kettle Channel, Rainy Lake

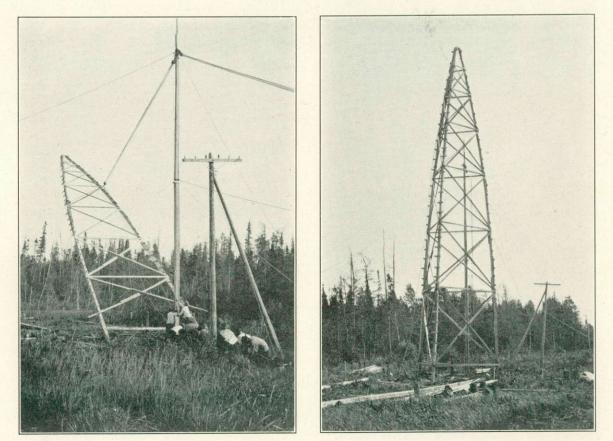

the summer at the same time that the stations were marked; the distances between stations were measured on the ice with invar tapes during the following winter. Subsidiary to this firstorder traverse is a major scheme of wellshaped quadrilaterals with sides 2 to 5 miles long, the stations of which are located on or near the lake shores. Detached minor schemes, with stations on the numerous islands, were developed from and controlled by the major scheme, and, at many of the minor stations, reference monuments were set. From the major scheme also, a graphic triangulation scheme consisting of chains of well-shaped quadrilaterals was extended into the deep bays by means of a large plane-table board and a telescopic alidade with long rule. A rigid control for the topographic mapping was thus obtained.

From the eastern end of Rainy Lake to the head of Pigeon River the principal control is as follows: Firstorder traverse on the western end of

### HORIZONTAL CONTROL

Namakan Lake by the United States Coast and Geodetic Survey; first-order triangulation from the eastern end of the first-order traverse to Basswood Lake by the United States Coast and Geodetic Survey; and first-order triangulation from Basswood Lake to Lake Superior by the Geodetic Survey of Canada. Major triangulation by the International Boundary Commission straddles the boundary through this region though not in a continuous chain; the stations of the major scheme are, as a rule, on prominent hills a few hundred feet above the lake level and about one-half mile back from the shores of the lakes. This scheme is tied to the first-order triangulation and traverse at 32 points. Twenty-two stations of the first-order and major triangulation are points common to both schemes. Continuous chains of minor triangulation were extended along these boundary waterways to determine the geographic positions of the reference monuments and to furnish control for the topographic maps, and these minor schemes were tied to and controlled by the major triangulation.

Along Pigeon River the principal control is the first-order triangulation of the Geodetic Survey of Canada to which the major triangulation of the International Boundary Commission is tied. The positions of the boundary reference monuments along the river were determined directly from a carefully run stadia traverse which was run along the banks and tied to the major scheme at intervals of

Tower building by United States party at Warroad North Base; (left) raising one side of instrument tripod; (right) instrument tripod in place ready for erection of scaffold

Native-timber tower erected by United States triangulation party at station "Bear," Rainy Lake, 1914

about 4 miles, and which checked with the control points with a maximum error of 1 part in 700.

Triangulation towers were built at many stations of the western part of the work in order to obtain intervisibility without cutting long lines of sight through the timber. They were erected principally at stations of the major schemes on Lake of the Woods, Rainy River, Rainy Lake, Namakan Lake, and Lac LaCroix. In 1913 one United States party built 7 towers of sawed lumber on Lake of the Woods and 17 on Rainy River. The height of these towers, measured from the ground to the instrument stand, ranged from 30 to 90 feet. In the same season on Rainy and Namakan Lakes, another United States party built 15 native-timber towers from 25 to 70 feet in height. In 1914 and 1915 a Canadian party on Namakan Lake and Lac LaCroix built 12 towers ranging in height from 25 to 75 feet. In 1917, on a scheme of first-order triangulation on Lake of the Woods, a United States party built 9 towers, the highest of which was 85 feet.

## MONUMENTS AND MONUMENTING

The boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior is marked by 1,373 reference monuments set on the shores of the lakes and streams through which the line passes, and by 9 boundary monuments set to mark the line on the three portages where there are no waterways and the line approximately follows the portage trails.

## Types of Monuments

The monuments referencing the boundary through the waterways are of four types:

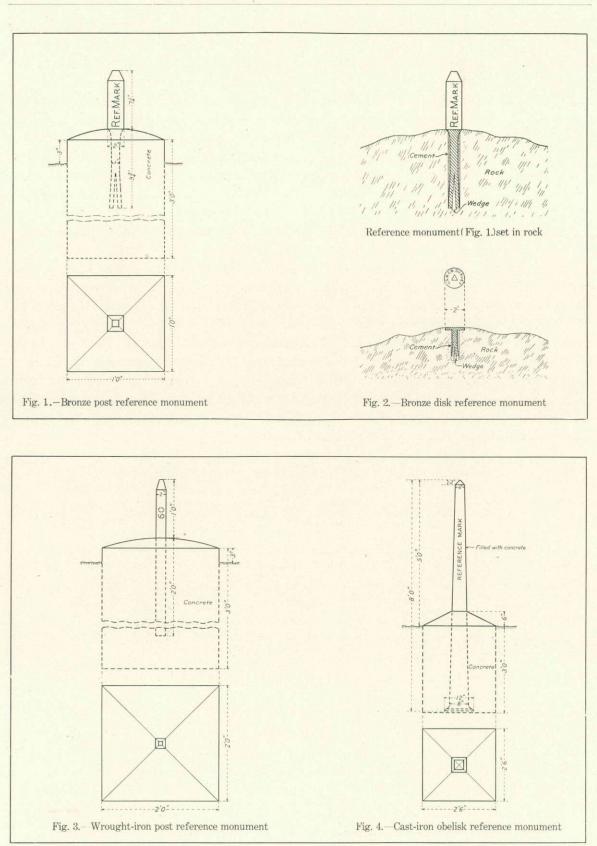

- 1. Bronze post. (Fig. 1, p. 89.)
- 2. Bronze disk. (Fig. 2, p. 89.)
  - 3. Wrought-iron post. (Fig. 3, p. 89.)
  - 4. Cast-iron obelisk. (Fig. 4, p. 89.)

The monuments marking the land portions of the line on the three abovementioned portages are of two types:

1. Conical bronze post. (Fig. 5, p. 90.)

2. Bronze obelisk. (Fig. 6, p. 90.)

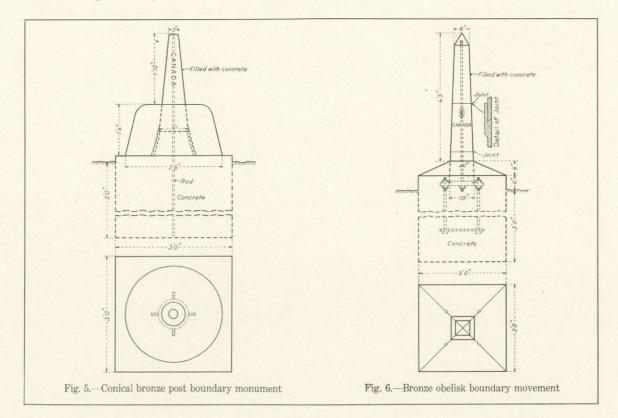

### MONUMENTS AND MONUMENTING

### FIELD AND OFFICE METHODS AND RESULTS

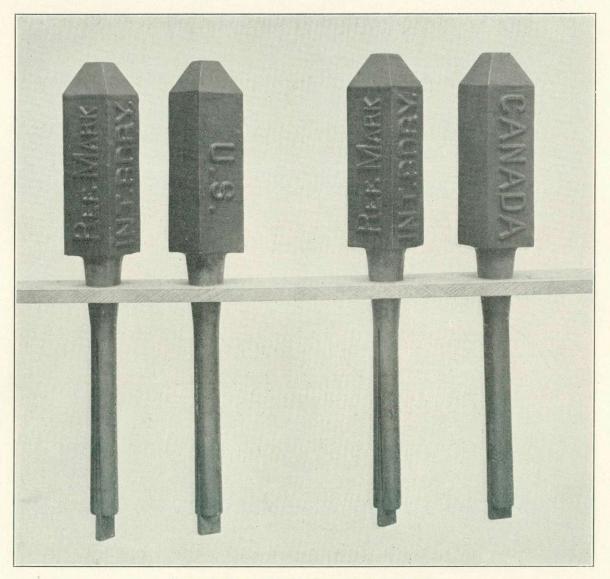

The bronze-post reference monuments (fig. 1) are made of manganese bronze containing 59 per cent copper, 38 per cent zinc, 2 per cent iron, and 1 per cent manganese. The part that projects above the surface of the concrete base or the rock in which the monument is set is a 2-inch square post  $7\frac{1}{4}$  inches high and beveled at the top: the part that extends below the surface is a 1-inch round shank  $9\frac{3}{4}$  inches long split at the lower end to take a metal wedge which, when the shank is driven into a hole drilled in the rock to receive it, expands the end so as to hold the monument firmly. The number assigned to each monument is outlined with drill holes, about one-fourth inch in diameter and spaced about one-fourth inch apart, on the smooth side of the post; and the words "REF. MARK," "INT. BDRY.," and either "CANADA" or "U. S." are cast in raised letters on the other three sides. In general these posts were set in solid ledge rock along the shores of the waterways, but where there were no outcropping ledges they were set in large bowlders or in concrete bases 12 inches square extending to a solid foundation below the frost line. Of the 1,373 reference monuments which mark the international boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior, 1,279 are of this type.

The bronze-disk reference monuments (fig. 2), of which there are only seven, were set on Pigeon River to supplement certain reference monuments of the bronzepost type at important places along the boundary. The disks are 2 inches in diameter and  $\frac{1}{4}$  inch thick, and are firmly held in place by a  $\frac{3}{4}$ -inch shank, 3 inches long, split to take a metal wedge which expands the shank as it is driven into place in a drill hole in the rock. Two-inch and three-inch disks of this type were used also to mark triangulation and traverse stations.

The wrought-iron post reference monuments (fig. 3), of which there are 84, were set to reference the boundary through Lake of the Woods and through Rainy River from its mouth to Baudette, Minn. (Rainy River, Ontario). Each of these monuments is a wrought-iron bar, the cross section of which is 2 inches square, set in a square concrete base. The part of the post that projects above the surface of the concrete is 1 foot long and is beveled at the top. The lower part of the post extends about 2 feet into the concrete. The number of the monument is outlined with drill holes, about one-fourth inch in diameter and spaced about one-fourth inch apart, on one side of the post; and the letters "U. S." or "C." are marked in the same way on the opposite side.

The cast-iron obelisks (fig. 4), of which there are only two, reference the initial point of this portion of the boundary, that is, turning point No. 1 in Northwest Angle Inlet of Lake of the Woods. These monuments, Nos. 1 and 2, set especially to

Bronze-post type of boundary reference monument

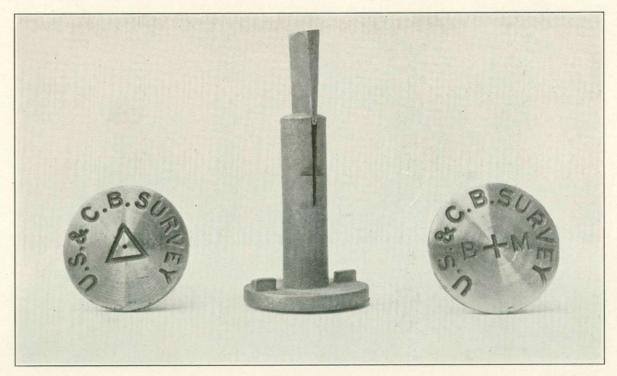

### FIELD AND OFFICE METHODS AND RESULTS

reference turning point No. 1, are of the same type as those on the meridian boundary south of this point. The two nearest monuments of the meridian boundary, Nos. 924 and 925, serve as a range which is an additional reference for turning point No. 1. These four monuments are cast-iron obelisks set in concrete bases with the top of the obelisk 5 feet above the ground. Reference monuments 1 and 2 bear the inscription "REFERENCE MARK," cast in raised letters on one side of the obelisk; the other sides bear no inscriptions. Monuments 924 and 925 bear these inscriptions: On the north side, "CONVENTION OF 1818"; on the east side, "UNITED STATES"; on the south side, "TREATY OF 1908"; and on the west side, "CANADA." The number on each of these two monuments is outlined with drill holes on the south side of the obelisk.

The conical bronze-post monuments (fig. 5) were set only on the three portages where there are no boundary waterways, the only land portions of the international boundary from Lake of the Woods to Lake Superior. There are seven monuments of this type, three on Watap Portage, three on Height-of-Land Portage, and one on Swamp Portage.

The composition of these bronze posts is about 10 per cent aluminum and 90 per cent copper. They are set in concrete bases which extend below the frost line; the tops of the bases rise 1½ feet above the surface of the ground. The conical bronze posts rise about 2 feet above their concrete bases. On opposite sides of these posts are cast in raised letters, "UNITED STATES" and "CANADA," and the number of the monument is outlined on the posts with drill holes.

The bronze obelisks (fig. 6) were set only on the boundary on Swamp Portage. There are only two monuments of this type. They rise about  $4\frac{1}{2}$  feet above their

Bronze-disk triangulation station mark and boundary bench mark

concrete bases and their composition and inscriptions are similar to those of the conical bronze-post monuments.

Beginning at the northern point of the meridian boundary in Northwest Angle Inlet of Lake of the Woods, all of the monuments set on the shores for the purpose of referencing the boundary turning points in the several international waterways are identified by numbers which run consecutively eastward to Lake Superior. The nine monuments which mark the land portions of the line are numbered in a separate series, in which Nos. 1, 2, and 3, mark the line across Swamp Portage between Swamp and Cypress Lakes; Nos. 4, 5, and 6 mark the line across Height-of-Land Portage between North and South Lakes; and Nos. 7, 8, and 9, mark the line across Watap Portage between Watap and Mountain Lakes.

### Construction of Monuments

Sites for the reference monuments could generally be chosen on outcrops of ledge rock or on large bowlders. On such a site, the setting of a bronze-post or bronze-disk reference monument was begun by drilling in the rock a hole of sufficient diameter and depth to receive the shank of the post or disk. (Figs. 1 and 2, p. 89.) The hole was filled with neat cement mortar and the shank, with the metal

wedge started in the split, was inserted in the drill hole; the disk or post was then driven home, the wedge spreading the shank and the cement filling the voids. Where wrought-iron posts were set as reference monuments in solid rock, a rough hole about 2 feet square was blasted. The post was plumbed and centered in the hole, and concrete was tamped around it and carried up above the surface of the rock.

Where solid rock could not be found for monument sites, the reference monuments were set in concrete bases. On Lake of the Woods and the lower part of Rainy River, the wrought-iron post monuments were set in bases 2 feet square. The bases of the monuments were slightly smaller in cross section along the remainder of the boundary, which was referenced, with a few exceptions, by manganese-bronze posts. The depth of the excavation for the bases in solid ground was 3 to 4 feet, but where the ground was swampy, the excavation was carried, if necessary, to a greater depth in order to secure a solid

Boundary monument No. 1, on Swamp Portage, between Swamp Lake and Cypress Lake

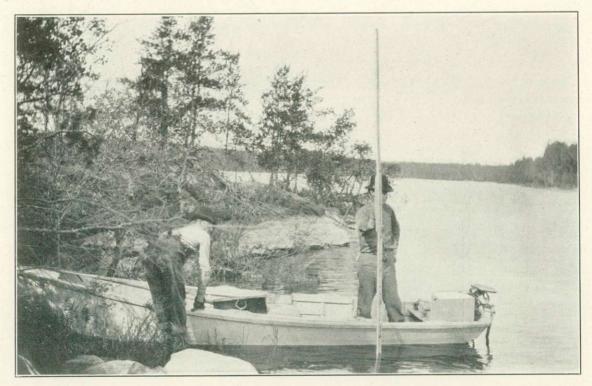

foundation. Of the monuments on the portages (Nos. 1 to 9, inclusive) the bases for the two obelisks were built nearly flush with the surface of the ground; the bases for the seven conical bronze posts were continued above ground in a circular form to a height of about 2 feet. All of the hollow shafts of these monuments were filled with concrete before they were put in place.

The proportions of the materials used in mixing the concrete for the large bases were 1 part Portland cement, 2½ parts sand, and 5 parts broken stone or gravel, the top being finished with a richer mixture from which the broken stone or gravel was omitted. For the small bases, a mixture of 1 part Portland cement to 4 parts coarse sand and fine gravel was used.

### TOPOGRAPHY

From the Northwesternmost Point of Lake of the Woods to Lake Superior the boundary follows an almost continuous system of waterways broken only at three places by short portages whose combined length is less than 1 mile. The line follows the old canoe route of the early fur traders which traversed a region of irregularly shaped lakes joined by streams comprising, as a rule, a series of ponds or pools connected by rapids or falls.

The topographic features have been shaped largely by the heavy sheet of ice that covered this region during the glacial period. The leveling action of the ice has resulted in a terrain characterized by relatively small differences of elevation; the highest hills in the area covered by the boundary maps, though often marked by precipitous cliffs, are only about 500 feet above the lakes in the neighboring valleys.

Topographic work, Rainy Lake; plane-table rodman and transportation equipment

#### TOPOGRAPHY

Many of these lakes have been formed by dams of glacial drift that has been deposited across eroded valleys. In the Rainy River region and along the southern shores of Lake of the Woods and the western part of Rainy Lake where an extensive deposit of glacial drift was left by the ice, there is much partly-forested swamp land. The region to the northward and eastward, where little drift was deposited, is a heavily-forested region of scanty soil and glaciated rocks.

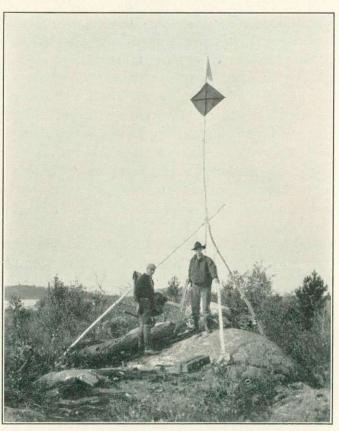

When the survey of this part of the international boundary was begun in 1908, no maps of the region had been made that could be used to fulfill the requirements of Article V of the treaty of 1908 that the course of the entire boundary as monumented by the commissioners should be "marked by them upon quadruplicate sets of accurate modern charts prepared or adopted by them for that purpose." Topographic surveys for maps for this purpose were therefore made coincident with the geodetic surveys necessary to determine the geographic positions of the monuments and the turning points of the boundary.

The field maps were made on several scales ranging from 1:2,500 to 1:45,000, depending upon the detail necessary to show the location of the boundary line and monuments with respect to the topographic features. A contour interval of 5 feet was used with the 1:2,500 and 1:5,000 scales; with the smaller scales, a 10-foot interval was used. The field mapping was always done on a larger scale than that upon which the official maps were to be published.

The horizontal control for the topographic survey was furnished by triangu-

lation and traverse carried along the boundary for this purpose and for the purpose of determining the geographic positions of the monuments and boundary turning points. (See Horizontal Control, p. 84.)

On Lake of the Woods and Rainy Lake additional control for the mapping of the islands and bays was obtained by plane-table triangulation developed from lines of the major scheme. In the development of this plane-table triangulation, the triangulation towers as well as the ground stations were occupied with a large plane table and a telescopic alidade with long rule. Chains of quadrilaterals were extended into the deepest bays, and, from the stations of the major triangulation, flags in trees on the hills and tall poles on prominent points of the shore line

Topographer and rodman at a plane-table station on Rainy Lake, 1914

### FIELD AND OFFICE METHODS AND RESULTS

Topographer at minor-triangulation station "New Rice," near Northwesternmost Point of Lake of the Woods, 1912

were cut in. With these numerous control points available, many of the stations of the stadia traverses, which were run along the shore line, were checked by resecting on near-by signals or by a determination of position by the graphic solution of the 3-point problem. Landlocked bays into which the triangulation could not be easily carried, were controlled by a line from outside the bay for orientation and a resection on one of the signals on the

hills to determine the position of the plane table, with a resection on a second signal for a check on the determination.

In general the topography was mapped with a 15 by 15 inch or 18 by 24 inch Johnson-head plane table, telescopic alidade, and stadia, the size of the board depending upon the distribution of control stations and the character of the country to be mapped. The plane table was oriented by compass. The areas that were too densely wooded for stadia readings, were covered with a network of short lines run with open-sight alidades, paraffined cloth tapes, and aneroid barometers. These lines were tied at both ends to stations of stadia traverses and were adjusted for closure. The topography in the wooded areas was thus mapped without the slow and expensive method of cutting lines through brush and timber.

For the mapping of the shore lines of the large lakes and streams, each party was equipped with a row boat or canoe driven by an outboard motor which, after the plane-table man had set up at a station, carried the rodman from point to point along the shore. During the mapping of the shore lines all submerged rocks that had been found were located on the plane-table sheet.

The vertical control was furnished by lines of spirit levels and by water levels based on bench marks of the Geodetic Survey of Canada, the United States Geological Survey, the United States Engineer Corps, and the Duluth and Iron Range Railroad. (See Leveling, p. 97.)

A small part of the topography between Crooked Lake and Lake Superior was mapped in the years 1910 to 1914 when elevations based on vertical angles were all that were available. Later, in 1915, 1916, and 1917, elevations based on combined spirit and water levels were determined for vertical control of the topographic work in this region. These later and more accurate elevations were found to agree closely with the earlier elevations determined by vertical angles.

### LEVELING

The vertical control for the topographic maps consists of a continuous system of leveling carried along the boundary from Lake of the Woods to Lake Superior. Spirit levels were run along the banks of the longer boundary streams and across the portages between the adjoining boundary lakes. Water levels were carried from one end of each boundary lake to the other, by taking simultaneous readings of the water surface elevations on two staff gages, one at each end of the lake.

The spirit levels were run in closed circuits with the accuracy required at that time for second-order levels, that is, with the requirement for closure of circuits that the discrepancy in feet should not exceed  $0.05 \sqrt{M}$  in which M is the length of the circuit in miles. It is believed that the water levels were carried from one staff gage to the next with an average error of less than 0.03 foot for each transfer of elevation.

The elevations published in this report (see p. 220) have been adjusted to agree with the latest adjustment (made in 1929) of the elevations above mean sea-level datum of bench marks of the Geodetic Survey of Canada to which the scheme of boundary levels has been tied in four places. The bench-mark elevations on the boundary maps are those used by the topographers in mapping the contours. They were determined from reliable data, such as the elevations of the bench marks of the Geodetic Survey of Canada as published in 1914, the bench marks of the United States Geological Survey, the United States Engineer Corps, and the Duluth & Iron Range Railroad. They were, however, determined (by the topographers) some years before the data for the final adjustment of the elevations were available. The elevations shown on the maps may, therefore, differ slightly from the elevations published in Appendix IV of this report.

The elevations in black on the official boundary maps refer to bench marks; the elevations in brown refer to the ground at monuments, section corners, or other marked points.

For the vertical control of the survey of Lake of the Woods, staff gages were established at Warroad, Minn., Oak Island, Oak Point (near the mouth of Rainy River), and in Northwest Angle Inlet. The elevation of the zero of the gage at Warroad was determined in May, 1912, by connecting it by means of a double line of spirit levels with the United States Army Engineers' bench mark at Warroad, the elevation of which had been determined by the United States Geological Survey. Readings of the elevation of the water surface were made on this gage three times each day from June 1 to October 31, 1912, and from April 28 to October 31, 1913. A similar series of readings was made on the Oak Island gage from June 8 to October 31, 1912, and from May 4 to October 27, 1913, and on the other gages for shorter periods. From these readings an accurate determination of the elevations of the Oak Island, Oak Point, and Northwest Angle Inlet gages was made by comparison with the readings of the Warroad gage. The elevation of a gage and bench mark, established at Zippel, Minn., by the United States Army Engineers, was determined during the winter of 1913, when the lake was covered with ice, by simultaneous observations made at Warroad and Zippel. A check on the accuracy of 96030-31---8

this determination was made by running a double line of spirit levels from the United States Geological Survey bench mark at Williams, Minn., to the bench mark at Zippel.

Gage readings for short intervals for use locally were also taken at Buckete, Blackbird, Bear, and Big Islands.

After the elevations of the zeros of these gages had been well determined, the vertical control for the topographic work was usually obtained by reading the elevation of the water surface on the nearest gage at the beginning of the day's work. The water surface was then used as a reference plane throughout the day and at the close of the day's work the gage was again read to make sure that the elevation of the water surface had remained constant.

Elevations for the control of the surveying operations along Rainy River were obtained from bench marks of the United States Geological Survey which had been set at intervals of about 10 miles between Baudette, Minn., and International Falls, Minn.

For the vertical control of the topographic work on Rainy and Namakan Lakes temporary bench marks were established at intervals of about 5 miles along the shores. The determination of their elevations was made in February, 1913, while the temperature was from 10° to 40° below zero and the lakes were covered with ice 3 to 4 feet thick. The elevation of each bench mark, usually a spike in a stump or root of a tree near the lake, was determined by cutting a hole through the ice and running a spirit-level line from the water surface to the bench mark. During these operations, readings of the elevation of the water surface of Rainy Lake were made on two staff gages, one at Ranier, Minn., and the other near the foot of Kettle Falls. From these data and from the known elevations of the zeros of the gages above sea level, the elevations of the Rainy Lake bench marks were determined.

From the bench mark at the head of Rainy Lake a double line of spirit levels was run along Kettle Channel to the bench mark and staff gage below Kettle Falls; the results showed that there was no appreciable difference in the elevation of the water surfaces at these two points. This line was continued across the Canadian portage to a bench mark and gage on Namakan Lake.

The vertical control was carried ahead from Namakan Lake to the western end of Lac LaCroix by two different routes. Early in the season of 1915, during low water, the elevation of Namakan Lake was determined from a bench mark at Steamboat Narrows and the difference in elevation between Namakan Lake and Sand Point Lake was determined by spirit levels. A double line of spirit levels was then run along the old Dawson Trail from Portage Bay in Sand Point Lake to Lac LaCroix, where a permanent bench mark was established. Later in the season during an extremely high stage of water, the rapids in Namakan Narrows and Little Vermilion Narrows became submerged, and while this condition prevailed water levels were carried from the Steamboat Narrows bench mark to the head of dead water on Loon River at a point just below Little Rapids. Spirit levels were then run from that point to the south end of Loon Lake and from the north end of Loon Lake to a permanent bench mark on Lac LaCroix at Beatty Portage. The

#### TRANSPORTATION

agreement between these independent determinations of the elevation of Lac LaCroix was very close. From these bench marks at the west end of Lac LaCroix the elevations were carried by water levels to the east end of the lake and to a permanent bench mark on the small island near the northwest end of Bottle Portage.

The vertical control for the survey of Iron Lake, Crooked Lake, Basswood River, and Basswood Lake was brought from bench marks of the Duluth & Iron Range Railroad at Winton and Ely, Minn., by combined spirit and water levels to Hoist Portage on one of the southern arms of Basswood Lake. From this point the vertical control was carried along the boundary by a combination of water levels and spirit levels, until a junction was made at the east end of Lac LaCroix with the levels that had been carried along the boundary from the west. The discrepancy developed by this closure was small and was easily taken up in making the adjustment of the elevations of the bench marks.

The levels were continued from Basswood Lake eastward along the boundary waterways, by water levels on the lakes and dead-water streams and by spirit levels where rapids or falls were encountered, until North Lake was reached. There a closure was made on a precise-level bench mark of the Geodetic Survey of Canada.

From North Lake to the head of Pigeon River vertical control was carried along the boundary by combined spirit levels and water levels. Along Pigeon River a double line of spirit levels was run to a closure on the water surface of Lake Superior.

The elevations east of the west end of Crooked Lake, determined in 1909–1914 by vertical angles (see Field Operations), were considered as preliminary values and were superseded by the elevations determined in 1915, 1916, and 1917 by combined spirit levels and water levels. The contours of the boundary maps of this region are based on these later determinations which did not differ materially from the preliminary elevations.

A list of the permanent bench marks that were established, together with their elevations and descriptions, is given in Appendix IV, page 220.

### FIELD TRANSPORTATION

As has been noted in the accounts of the work of the several field seasons, the problem of the economical transportation of equipment and supplies from the nearest railroad towns to the camps of the surveying parties, and of the rapid and orderly movement of camp outfits from point to point along the boundary, was always an important consideration. The survey camps were often 30 or 40 miles from their bases of supplies and, except along part of Rainy River, no railroads or highways paralleled the boundary. In general the only available means of transportation along the boundary was by motor launches or canoes and by back-packing. Water transportation on the smaller lakes was always hampered by the necessity of portaging the canoes and their loads between the lakes and around the falls and rapids of the streams. There were 35 places where back-packing had to be done over portages and along narrow streams, for distances of 40 feet to  $1\frac{1}{2}$  miles, in following the boundary from the west end of Rainy Lake to the head of Pigeon River.

On Lake of the Woods and on Rainy Lake, where severe storms were not uncommon, it was necessary for each of the large field parties to have at least one motor launch capable of navigating with safety in heavy weather. These boats were

#### FIELD AND OFFICE METHODS AND RESULTS

Type of flat-bottomed boat used by United States parties on Rainy Lake, 1913 and 1914

from 40 to 48 feet in length, of about 3-foot draft, of 18 to 24 horsepower, and usually with plenty of deck room for rapid and easy handling of camp equipment and supplies.

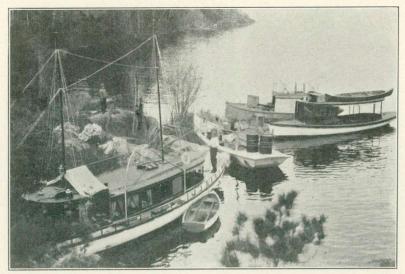

In addition to one launch of this type, the large United States organization in 1913 and 1914 had one 32-foot launch and two flat-bottomed light-draft fish boats, 23 and 26 feet long, respectively. The flat-

bottomed boats were found to be very serviceable on Rainy Lake where, outside the regular channels, numerous submerged rocks made navigation hazardous for other types of boats. These boats could land almost anywhere along the lake shore and were seldom damaged when they struck submerged rocks or logs.

A 16-foot rowboat driven by a 2½-horsepower Waterman "Porto" outboard motor was part of the equipment of each topographic unit. In such a boat, during the mapping of the lakes, the plane-table rodman could go rapidly from point to point giving readings along the shore of the mainland or islands—a procedure which would have been slow and costly without the motor. When mapping the terrain near camp each topographic unit went to and from the working grounds under the power of its own motor, but when the distance was considerable the small boats were towed to and from work by one of the large launches. The tri-

angulation units, which usually traveled longer distances than the topographic units, used the larger boats.

Supplies and mail werebrought to the parties while camped on Rainy Lake by freight boats which made regular trips between International Falls and Kettle Falls. These boats were of deep draft and for this reason a survey launch met them on the lake

United States launches moving camp to mouth of Seine River, Rainy Lake, 1914

### TRANSPORTATION

to receive the mail and supplies. When it became necessary to move camp, a large barge towed by the 48-foot launch was used in order to take the entire outfit at one trip.

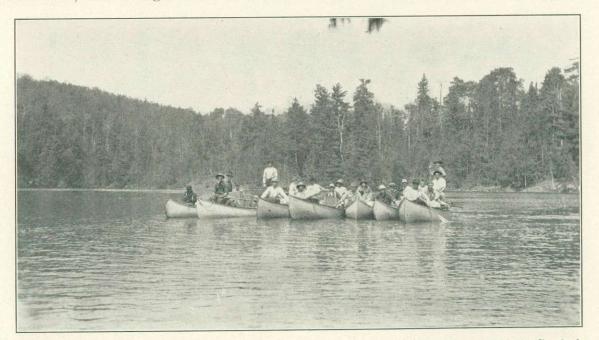

The topographic party working along Rainy River used an 18foot open launch and a 16-foot rowboat. Camp was moved by means of a 16-foot barge which was towed by the launch.

Type of flat-bottomed boat and outboard motor equipment used by topographers of United States parties on Lake of the Woods and Rainy Lake

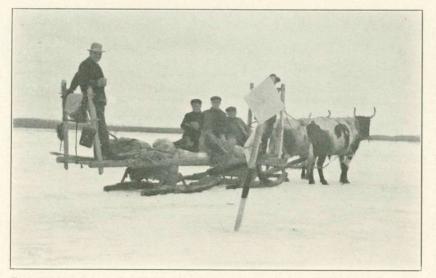

Similar but larger boats were used by the triangulation and monumenting parties along Rainy River. The party engaged on major triangulation along Rainy River depended principally upon horses and wagons for transportation.

On Namakan, Sand Point, Little Vermilion, and Loon Lakes and on Lac LaCroix the transportation equipment included three launches (the largest of which was 36 feet long), rowboats, canoes (some with outboard motors), and a "wanigan" or houseboat. All supplies, outfit, and men were transported by the boats of the survey party. Between Loon Rapids and Lac LaCroix, only the smaller boats were used, as the larger ones could not be taken over the portages.

Transportation equipment used by the United States parties, from the head of Pigeon River to Crooked Lake

### FIELD AND OFFICE METHODS AND RESULTS

From Curtain Falls, at the west end of Crooked Lake, to the head of Pigeon River, the region where portages were most numerous, canoes were the principal means of transportation. On Crooked and Basswood Lakes, however, the party was able to hire motor boats of a fishing company to move camp and to transport supplies.

Locally hired outfit used on the ice by triangulation party, Lake of the Woods, 1913

From Mountain Lake eastward, teams belonging to the Pigeon River Lumber Co. were of assistance in moving camp, following the rough tote roads built by the company.

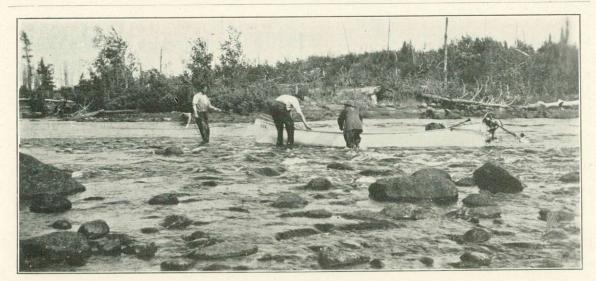

Along Pigeon River dependence was placed principally upon the lumber company's teams for supplying camp and moving the outfits, but on the dead-water stretches between the head of the river and The Cascades, transportation along the boundary was principally by canoes.

For the short season of triangulation on Lake Superior the steam launch *Picket* was hired to enable the party to establish stations on the islands off the mouth of Pigeon River and to the the work to the triangulation of the United States Lake Survey.

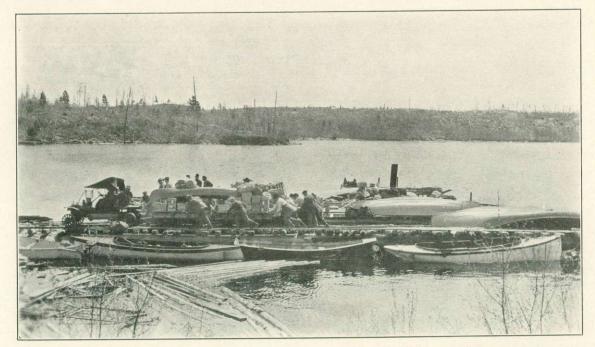

Portaging equipment used by United States party on Prairie Portage, from Birch Lake to Carp Lake

### TRANSPORTATION

Transportation on Granite River

At times during the several seasons of field work, the survey parties made use of rather unusual means of transportation. Toboggans hauled by members of the party were used to transport supplies and equipment during the measurement of a base line (the line "Had–Garb") on the ice on Basswood Lake in the winter of 1915–16. Bobsleds with light teams of horses were used during the winter of 1913 by the level party on Rainy and Namakan Lakes to haul camp equipment and supplies and by the triangulation party on Lake of the Woods to haul lumber to sites at which towers were to be built. The 4-mile portage between Fall and Basswood Lakes, over which all supplies and equipment for the survey parties in that vicinity had to pass, was used by the courtesy of the St. Croix Lumber Co. which

Ford car and trailer used by United States party on the 4-mile railroad between Fall Lake and Basswood Lake

had laid a narrow-gage track of steel rails from lake to lake. The rolling stock consisted of a flat car pulled by an automobile, the wheels of which had been replaced by flanged car-wheels. On the portages between several of the boundary lakes, tracks of poles had been built by fishermen and lumbermen, and over these tracks the loads were portaged on flat cars, which were pulled up the steepest inclines with a rope and windlass.

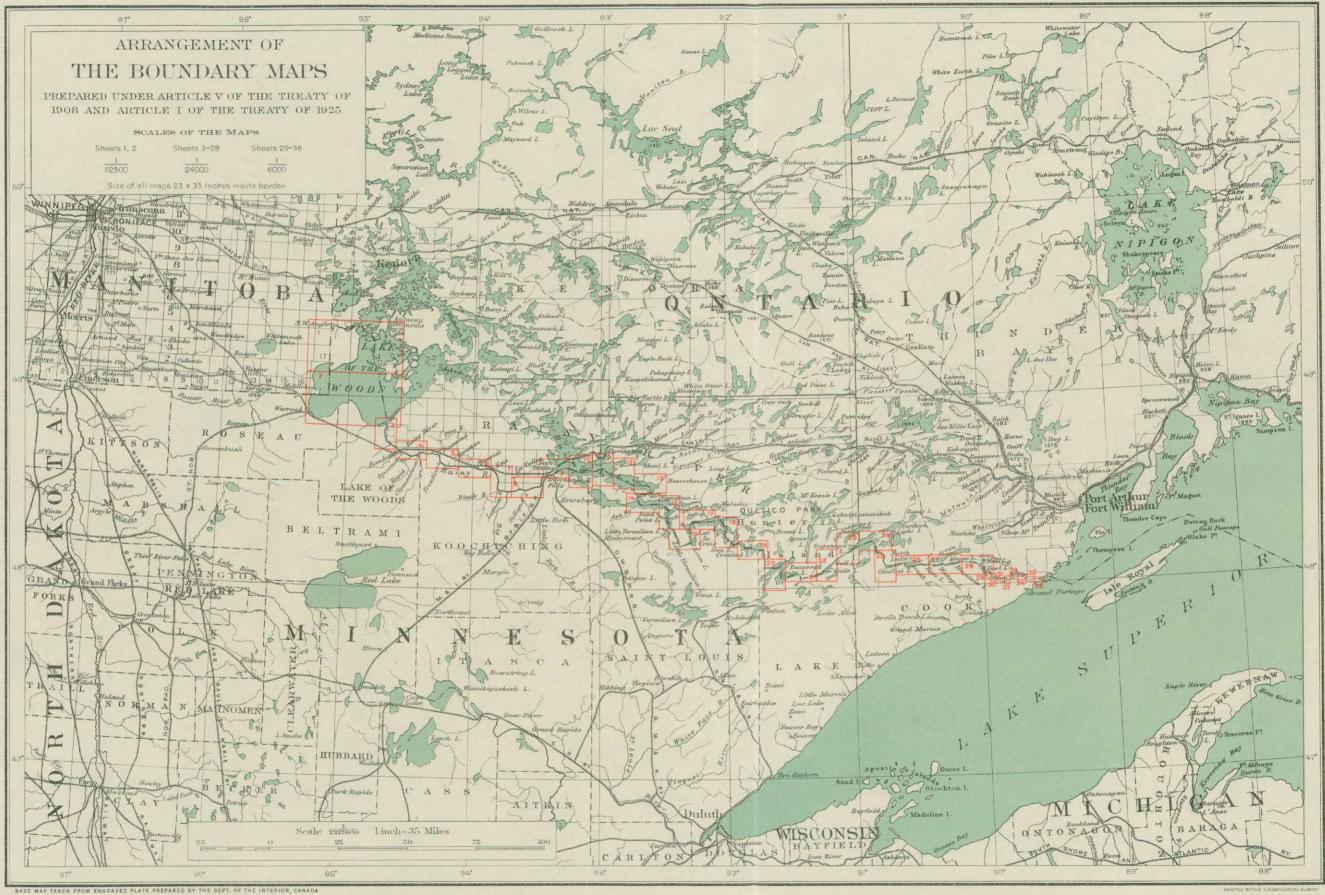

Back-packing by members of the party was unavoidable. Across the portages that were not equipped with tramways the only way that the canoes and their loads could be transferred from one lake to the next was by back-packing. So, too, in the construction of the triangulation towers on Rainy Lake and the lakes to the eastward, the blocks and ropes, which constituted the hoisting equipment, together with saws, axes, and spikes, had to be back-packed through the woods from the nearest waterway to the tower site. This meant, on an average, a half mile of rough traveling with a load of 100 pounds on each man's back.

### THE OFFICIAL MAPS

Article V of the treaty of 1908, pertaining to the boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior, stipulates that "the course of the entire boundary as described and laid down as aforesaid and as monumented by said Commissioners shall be marked by them upon quadruplicate sets of accurate modern charts prepared or adopted by them for that purpose, and that said charts so marked shall be certified and signed by them and two duplicate originals thereof shall be filed with each Government \* \* \*."

The charts upon which the commissioners have marked the boundary line from the Northwesternmost Point of Lake of the Woods to Lake Superior, in accordance with the above provisions of the treaty of 1908, are topographic maps prepared from the surveys made by the field force of the commission. They comprise a series of 36 sheets arranged and numbered as shown on the index map on the opposite page. They have been engraved on copper plates and printed from lithographic stones. The engraved plates will be preserved by the two Governments as permanent records of the work. The four official sets of maps, two sets for each Government, signed by the commissioners, are transmitted in atlas form with this report. The maps for distribution to the public are identical with those of the official sets except that they bear the word "Copy," the year of publication, and the commissioners' signatures in facsimile.

The size of each map, inside the border, is 23 by 35 inches. The conventional signs used to represent the topographic features are those adopted by the United States Board of Surveys and Maps. The boundary line, monuments and other culture, and lettering appear in black, relief (contour lines) in brown, drainage in blue, and timber in green. The maps are constructed on the polyconic projection on scales of 1:6,000, 1:24,000, and 1:62,500, the scale depending upon the detail needed to show clearly the location of the boundary line with respect to important topographic features. Insert maps of the very narrow boundary channels are shown

PRINTE

#### THE OFFICIAL MAPS

on 1:3,000, 1:6,000, 1:10,000, and 1:12,000 scales. A contour interval of 5 feet is used on the inserts and on the Pigeon River maps. On the rest of the maps a 10-foot interval is used. At the top of each map are the title, the number of the sheet, the names of the commissioners, and copies of the seals of the two countries. In the lower right corner is the commissioners' certificate, which reads as follows:

### Sheet 1—

We certify that this map is one of the quadruplicate set of thirty-six (36) maps prepared under Article V of the Treaty between Great Britain and the United States of America, signed at Washington, April 11, 1908, and that we have marked hereon the Boundary Line as reestablished by the Commissioners designated above, in accordance with the provisions of Article V of the Treaty of 1908 and of Article I of the Treaty between the United States and His Britannic Majesty, in respect of the Dominion of Canada, signed at Washington, February 24, 1925.

### PREPARATION OF THE MAPS

The first step in the preparation of the maps, after the completion of the surveys in the field, was to ink the penciled plane-table sheets. This was done in the office at the close of each field season, usually by the topographers who had done the mapping. The field drawings that were made on 15 by 15 inch plane-table sheets, after being inked, were photographed and printed on transparent celluloid sheets, the black lines of which were dusted with powdered graphite. The celluloid sheets were then adjusted to projection lines drawn on 24 by 36 inch office sheets and the field drawings were transferred to these by rubbing the celluloid with an oiled steel burnisher. The graphite lines which were thus transferred were inked in the three colors in which they were to be printed and the large assembled sheets were then delivered to the engraver, together with the geographic positions of control points, monuments, and boundary turning points. Where there were numerous control points on each field sheet, as on the 18 by 24 inch sheets used along Rainy River, it was unnecessary to transfer the topography to a larger sheet; after the sheet was inked it was delivered directly to the engraver.

In preparing the engraved plates for each map the engraver first cut on a copper plate the lines of a polyconic projection carefully laid out to the scale of publication. From these parallels of latitude and meridians of longitude he then plotted the geographic positions of the control points, monuments, and boundary turning points. This was done under the supervision of the cartographer of the United States

### FIELD AND OFFICE METHODS AND RESULTS

section of the commission, who verified the projection and checked the positions of the plotted points. By a wax-transfer process the projection and control points were then transferred from this plate to two other copper plates, one for the brown lines of the map and one for the blue lines. The topographic drawings, which had been furnished to the engraver, were photographed to the scale of the engraved projection and wax impressions on transparent celluloid were made of the negatives, and these were transferred to the three copper plates. The features to be shown in brown were then engraved on one plate, those to be shown in blue on the second, and those to be shown in black on the third, the plate on which the projection lines were engraved.

The three engraved plates were then delivered to the printer together with a timber sheet showing the outlines of the wooded areas, the character of the forest growth, and sufficient control points for fitting the timber sheet to the map projection. The printer "pulled" an impression from each of these three plates and transferred each impression to a separate lithographic stone. Likewise from standard timber-symbol patterns, he transferred to a fourth stone the proper symbols for the wooded areas outlined on the timber sheet which were to be shown on the finished map in green. From these four stones the finished map was then printed, each map being run through the press four times to receive an impression from each of the four stones.

A limited edition of the maps has been printed for each Government for distribution to other governmental agencies having use for them, to libraries, and to others interested in the exact location of any part of the international boundary line. In the United States, copies of the report and maps are on file in the Library of Congress and in other libraries designated by the Government as "depository libraries" that is, those which receive all United States Government publications. In Canada they are on file in the Dominion Archives, in the libraries of the Dominion Parliament and of the provincial legislative assemblies, and in university and reference libraries throughout the country.

### ESTABLISHMENT OF THE POINT ADOPTED IN LIEU OF THE ORIGINAL NORTHWESTERNMOST POINT OF LAKE OF THE WOODS IN ACCORDANCE WITH THE PROVISIONS OF THE TREATY OF 1925

In 1824 David Thompson, surveyor and astronomer for the British Government, received instructions from the commissioners under Article VII of the treaty of Ghent to determine the "most northwestern point" of Lake of the Woods originally named in the treaty of peace, 1783, as the point to which the international boundary was to run westward through the waterways from Lake Superior. Accordingly, in the course of his surveys of the western and northern portions of Lake of the Woods in 1824, Thompson selected, monumented, and determined the astronomical positions of three points which, in his opinion, came nearest to meeting the requirements of the treaty—a point in Northwest Angle Inlet; a second point in Monument Bay, east and a little north of Northwest Angle Inlet; and a third in Portage Bay still farther north.<sup>1</sup> Another point which was later to be given consideration as the probable site of the Northwesternmost Point was at Rat Portage (Kenora), where an extensive series of astronomical observations had been made by Thompson during the previous year.

As a result of Thompson's work it was apparently realized that it would be necessary, in finally selecting the "most northwestern point," to choose between Rat Portage and the locality of the first point marked by Thompson in 1824, near the head of Northwest Angle Inlet. Accordingly, in the following year, 1825, Dr. J. L. Tiarks, astronomer for the British Government, inspected these two localities and decided that a point nearly a mile north of Thompson's monument in Northwest Angle Inlet was the true "most northwestern point" of Lake of the Woods.<sup>2</sup> Tiarks's astronomic determination of the position of this point placed it in latitude 49° 23′ 55″, longitude 95° 14′ 38″.<sup>3</sup>

Accordingly, in 1842 this point was accepted by the two Governments, and until the treaty of 1925 it figured in boundary history as the western terminus of the section of the line from Lake Superior to Lake of the Woods and the initial point of the section of the line running south therefrom to the forty-ninth parallel and thence westward to the Rocky Mountains.

It was indicated, however, on a map made by the boundary commission of 1872–1876,<sup>4</sup> and the fact was definitely established by the surveys made in 1912 <sup>5</sup>

<sup>5</sup> See map, p. 108.

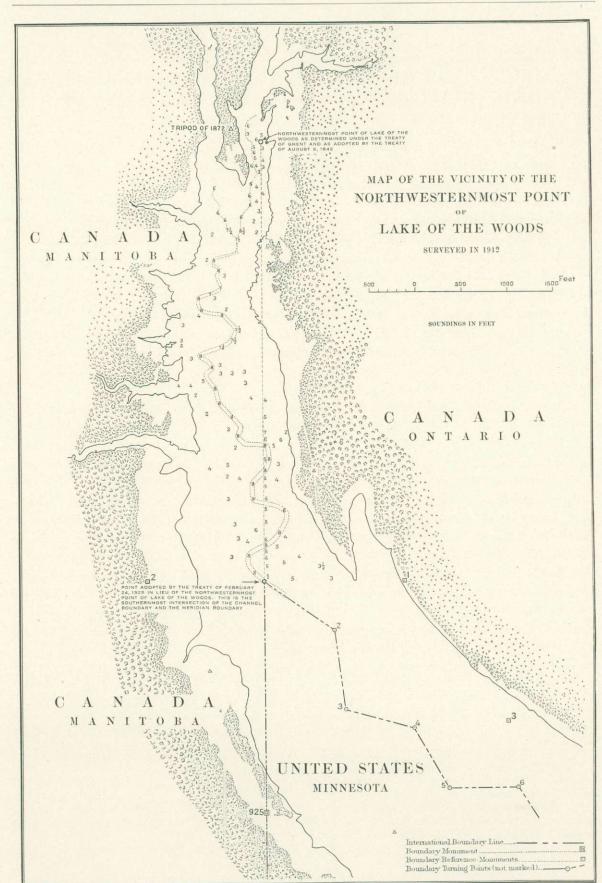

<sup>&</sup>lt;sup>1</sup> For Thompson's account of the selection of these points see Appendix III, p. 217.

 $<sup>^2</sup>$  A statement of Tiarks's reasons for selecting the point in Northwest Angle Inlet will be found in Appendix III, p. 218.

<sup>&</sup>lt;sup>3</sup> Art. II, treaty of 1842, p. 211 of Appendix II. Also Journal of the Commissioners under the Treaty of Ghent, U. S. House of Representatives Document No. 451, 25th Cong., 2d sess., p. 48.

On the North American datum of 1927 the coordinates of the Northwesternmost Point are latitude  $49^{\circ}$  23' 51''.35, longitude  $95^{\circ}$  09' 11''.36.

<sup>&</sup>lt;sup>4</sup> See map published in Report upon the Survey of the Boundary between the Territory of the United States and the Possessions of Great Britain from the Lake of the Woods to the Summit of the Rocky Mountains, by Archibald Campbell, United States commissioner, p. 83.

108 POINT ADOPTED IN LIEU OF ORIGINAL NORTHWESTERNMOST POINT

under the treaty of 1908 that the straight course of boundary running due south from the Northwesternmost Point was intersected at five points by the winding course of boundary which follows the deep-water channel of Northwest Angle Inlet, thereby leaving two small areas of United States waters entirely surrounded by Canadian waters, a territorial delimitation neither intended nor desired by either Government.<sup>6</sup>

The commissioners acting under the treaty of 1908 therefore agreed that the southernmost point of intersection of these lines, as determined in 1912, should be permanently fixed and monumented and were prepared to recommend to the two Governments, as they later did, that this point be adopted in lieu of the original Northwesternmost Point specified in Articles V and VI of the treaty of 1908, so as to eliminate from the general line of demarcation between the two countries the intersecting portions of the boundary north of this point.<sup>7</sup>

The commissioners' recommendations that this point be adopted in lieu of the Northwesternmost Point were acceptable to the two Governments, and in 1925 the point was formally adopted by Article I of the treaty of that year, which in part reads as follows:

The Contracting Parties, in order to provide for a more practical definition of the boundary between the United States and the Dominion of Canada in Lake of the Woods, hereby agree that this most southerly point of intersection, being in latitude 49° 23' 04".49 north, and longitude 95° 09' 11".61 west, shall be the terminus of the boundary line heretofore referred to as the international boundary line between the United States and the Dominion of Canada from the mouth of Pigeon River, at the western shore of Lake Superior, to the northwesternmost point of Lake of the Woods and the initial point of the boundary line heretofore referred to as the international boundary between the United States and the Dominion of Canada from the northwesternmost point of Lake of the Woods to the summit of the Rocky Mountains, in lieu of the said northwesternmost point.

Article I of the treaty of 1925 further provides that "The aforesaid most southerly point shall be located and monumented by the Commissioners appointed under the said Treaty of April 11, 1908, and shall be marked by them on the chart or charts prepared in accordance with the provisions of Articles V and VI of the said Treaty, and a detailed account of the work done by the Commissioners in locating said point, together with a description of the character and location of the several monuments erected, shall be included in the report or reports prepared pursuant to the said Articles."

<sup>7</sup> This peculiar situation was given some consideration by the commissioners of the survey of the boundary from Lake of the Woods to the Rocky Mountains, made in 1872 to 1876, as is shown by the report of the British commissioner on file in the archives of the Canadian Government at Ottawa, but no formal action was taken.

<sup>&</sup>lt;sup>6</sup> In 1902 the question of jurisdiction was raised by the General Land Office of the United States with respect to the areas inclosed between the meridian boundary and the channel boundary, and an opinion regarding this question was requested of the Department of State. The solicitor of that department, in a letter from the Secretary of State to the Secretary of the Interior dated June 25, 1904, advised against disposing of any lands in these areas and made the following reference to the boundary line in this vicinity:

<sup>&</sup>quot;It has been suggested that since it was the intendment of the treaty [of 1842] to settle finally the continuous boundary line between the two countries, all that portion of the line described in the treaty which lies north of the first intersection of the meandering and the meridional lines should be rejected. This would leave a single continuous boundary line running along the line described from Rainy Lake to its first point of intersection with the meridian line, thence south along the meridian line to the 49th parallel, thence west to the Rocky Mountains."

In setting forth herein, as prescribed by the foregoing paragraph of the treaty, the detailed account of the work done by the commissioners in locating said point, etc., it should be stated at the onset that practically all of the work of determining, locating, and monumenting the point specified by the treaty in lieu of the North-westernmost Point was actually done several years prior to the adoption of the point by the two Governments in 1925.

Late in the fall of 1912 a United States party under Mr. E. C. Barnard, surveyor in charge, made a detailed geodetic, topographic, and hydrographic survey of the northern part of Northwest Angle Inlet for the purpose of determining the position of the Northwesternmost Point and the course of the channel boundary southward therefrom. Although the surveyors of the boundary commission of 1872–1876 had redetermined the position of the Northwesternmost Point<sup>8</sup> and had monumented the meridian line southward therefrom with durable cast-iron monuments, they had not monumented the point itself. It was necessary therefore, in connection with the survey of 1912, that the point again be redetermined, and as the party could find no trace of the reference monument erected by David Thompson in 1824, the work of recovering the Northwesternmost Point had to be done entirely from the records of the survey of 1872, that is, by projecting the meridian line northward from monument 925 and laying off thereon the recorded distance from monument 925 to the Northwesternmost Point.

Accordingly, an 833-meter base line was measured with invar tape along the western shore of the inlet in the vicinity of the meridian line, and from this base a small scheme of triangulation was expanded up the inlet to include the site of the Northwesternmost Point and also southward to a junction with the general scheme of triangulation of Lake of the Woods which had been begun in Northwest Angle Inlet earlier that year by a Canadian party. Monument 925 of the meridian boundary was included in the triangulation, and the azimuth of that line was checked by an astronomic azimuth which was observed at station "New Rice." The meridian line was then projected north from monument 925, and on this projected line a signal was erected near the probable site of the Northwesternmost Point and tied to the scheme of triangulation. The position and distance of this point relative to monument 925 were then computed, and the precise location of the Northwesternmost Point was determined therefrom by laying off from this arbitrarily chosen point such distance on the meridian line as would make the distance from monument 925 to the Northwesternmost Point precisely 7,307 feet, which was the distance determined originally by the surveyors of the boundary commission of 1872–1876.<sup>9</sup>

<sup>9</sup> Report upon the Survey of the Boundary between the Territory of the United States and the Possessions of Great Britain from the Lake of the Woods to the Summit of the Rocky Mountains, by Archibald Campbell, United States commissioner, p. 35. Also U. S. Senate Executive Document No. 41, 44th Cong., 2d sess., p. 44.

<sup>.&</sup>lt;sup>8</sup> The surveyors of 1872 recovered the position of the Northwesternmost Point from the reference monument erected by David Thompson in 1824. This monument is described by Thompson as consisting of "a square monument of logs of 12 feet high by 7 feet width, the lower part of oak, the upper part of aspen." One charred log of this monument was recovered by the surveyors in 1872; the rest of the monument had evidently been destroyed by forest fires or carried away by high water. (Report upon the Survey of the Boundary between the Territory of the United States and the Possessions of Great Britain from the Lake of the Woods to the Summit of the Rocky Mountains, by Archibald Campbell, United States commissioner, pp. 305 and 307.)

The point as thus established was accepted as being on the site of the original Northwesternmost Point. Its geographic position computed through the triangulation done in 1912 was latitude  $49^{\circ}$  23' 51''.70, longitude  $95^{\circ}$  09' 11''.63. On the North American datum of 1927, the datum on which all the boundary triangulation, turning points, and monuments are based, the position of the point is latitude  $49^{\circ}$  23' 51''.35, longitude  $95^{\circ}$  09' 11''.66.

On a narrow tongue of land a few hundred feet west of the Northwesternmost Point the party found an old native-timber tripod which was a station mark left by the surveyors of the boundary commission of 1872–1876.<sup>10</sup> This tripod was tied in to the general scheme of triangulation, and its position relative to the Northwesternmost Point, as shown on the map on page 108, was found to check closely with that recorded in the manuscript copy of the report of the British commissioner of the survey of 1872–1876, quoted in the footnote on this page. A photograph of the tripod as it appeared in 1912 will be found on page 40.

As soon as the triangulation was completed and the location of the Northwesternmost Point determined, a detailed topographic and hydrographic survey, controlled by the triangulation, was made to accurately determine the location of the shore line of the northern part of the inlet and the course of the deep-water channel. This survey was made with plane table and stadia on a field scale of 400 feet to the inch. The deep-water channel was carefully sounded throughout its width and length with a graduated rod, and the positions of the soundings were determined with telescopic alidade and stadia from plane-table stations on the shore and plotted directly on the plane-table sheet at the time the soundings were taken. A photolithographic reproduction of this plane-table sheet showing the course of the channel as thus run out appears in map form on page 108.

The survey showed that the boundary channel was a well-defined open-water channel of a uniform width of about 60 feet; that it was from 2 to 3 feet deeper than the water on either side of it; that within a distance of less than 1 mile south of the Northwesternmost Point its winding course intersected the meridian boundary at five points; and that these intersecting lines of boundary, the meridian boundary and the line along the channel, inclosed between each intersection a small area of possibly indeterminate jurisdiction.

With the development of these facts, the southernmost of these points of intersection began to assume considerable importance. A signal was therefore erected at the point and its position was carefully determined by triangulation.<sup>11</sup> Later in 1912 the commissioners, after carefully studying the situation, decided that they would permanently monument this point and that they would recommend to the

<sup>&</sup>lt;sup>10</sup> A reference to this station, on p. 306 of the report of the United States commissioner of the boundary survey of 1872–1876, shows that the tripod was erected by Capt. James F. Gregory, one of the engineers of the United States section of the commission. The following reference, from a manuscript copy of the report of the British commissioner of the same survey, further identifies the tripod as a station of the survey of 1872–1876: "A trigonometrical station 36 feet high was erected on the spit of land immediately to the west of the assumed N.W. Point, from which it bears North 59° 09' West (true bearing) distant 377.3 feet."

<sup>&</sup>lt;sup>11</sup> The position of the point of southernmost intersection (boundary turning point No. 1), as determined by the commissioners and as later adopted by the treaty of 1925, is shown on Sheet No. 1 of the official maps of the section of the international boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior, and on Sheet No. 59 of the official maps of the section of the international boundary from the Gu'f of Georgia to the Northwesternmost Point of Lake of the Woods.

two Governments that it be adopted in lieu of the original Northwesternmost Point so as to eliminate from the boundary line the intersecting portions north of this point.

This monumenting was done early the following spring. While the lake and the adjacent swamps were still frozen two cast-iron reference monuments and the materials for their concrete bases were transported on sleds from the railroad at Warroad, Minn., to Northwest Angle Inlet and were erected on the shores of the inlet, on either side of the southernmost point of intersection which had been carefully located and marked the year before. The monuments had been specially cast for the purpose. They were 8-foot hollow cast-iron posts,<sup>12</sup> and when set they projected 5 feet above their concrete bases, which were  $2\frac{1}{2}$  feet square, resting on a solid foundation below the frost line. Each monument bears the inscription "REF-ERENCE MARK" cast in raised letters on one side of the iron post. Before being set, each monument was filled with concrete to increase its durability and its resistance to forest fires.

The two reference monuments are designated No. 1 and No. 2. They are set on a straight line which passes through the point which they reference. Reference monument No. 1 is 1,526 feet east of this point, and reference monument No. 2 is 1,268 feet west.<sup>13</sup>

The geographic positions of the reference monuments and the point which they reference were carefully determined by triangulation. The geographic positions of the reference monuments as thus determined were: Reference monument No. 1, latitude 49° 23′ 04″.50, longitude 95° 08′ 48″.55; reference monument No. 2, latitude 49° 23′ 04″.48, longitude 95° 09′ 30″.77. The geographic position of the point which these monuments reference, as thus determined by triangulation, was latitude 49° 23′ 04″.49, longitude 95° 09′ 11″.61, which is the position of the point as later designated in the treaty of 1925. Expressed in terms of North American datum of 1927, the datum on which all points in this report are based, this position is latitude 49° 23′ 04″.14, longitude 95° 09′ 11″.34.<sup>13</sup> The point is 4,785 feet south of the original Northwesternmost Point and 2,522 feet north of monument 925 of the meridian line. This point, adopted by the treaty of 1925 and established by the commissioners, is the most northern point on the international boundary between the United States and the Dominion of Canada.

<sup>&</sup>lt;sup>12</sup> See fig. 4, p. 89.

<sup>&</sup>lt;sup>13</sup> See Description and Definition of the Boundary Line, p. 114

### DESCRIPTION AND DEFINITION OF THE INTERNATIONAL BOUNDARY LINE FROM THE NORTHWESTERNMOST POINT OF LAKE OF THE WOODS TO LAKE SUPERIOR

The section of the international boundary line between the United States and the Dominion of Canada from the Northwesternmost Point of Lake of the Woods to Lake Superior as now reestablished consists of a series of 1,796 straight-line courses joining consecutively numbered "turning points". It is referenced by 1,373 boundary reference monuments set along the shores of the waterways, and is marked by nine boundary monuments on three short portages.<sup>1</sup> The total length of the line is 425.79 miles, 425.01 miles through waterways and 0.78 mile across land at the portages.

The description of the line, as reestablished by the commissioners and as marked by them on the 36 boundary maps which accompany this report, is set forth in tabular form, pages 114 to 187, inclusive. The tables give the geographic positions of all the boundary turning points, together with the lengths and azimuths of the connecting straight-line courses. They also give the geographic positions of the boundary monuments, the boundary reference monuments, and the lengths and azimuths of the lines from the reference monuments to the boundary turning points which they reference.

The lengths of the courses and other tabulated distances are given in meters, and the azimuths are reckoned clockwise from due south. All distances have been reduced to 'mean sea level. To obtain the actual horizontal distances between points at known elevations above sea level, the distances given in the tables should be increased by an amount equal to 0.0000000478 L E, in which L is the tabulated length of the course in meters and E is the mean elevation of the ends of the course in feet. The maximum value of this increase for any course on this part of the international boundary is less than 1 part in 12,000.

All latitudes and longitudes are given on the North American datum of 1927. This is the standard geodetic datum recently adopted by the United States Coast and Geodetic Survey and the Geodetic Survey of Canada for the western part of North America and it supersedes the former North American datum. It is the result of a readjustment of the western network of arcs of the first-order triangulation, retaining the latitude and longitude of the station "Meades Ranch" of the former North American datum, but controlling the orientation in the new adjustment by many more Laplace azimuths distributed throughout the network.<sup>2</sup>

96030-31-9

<sup>&</sup>lt;sup>1</sup>Swamp Portage, Height-of-Land Portage, and Watap Portage.

<sup>&</sup>lt;sup>2</sup>A geographic position is said to be on the North American datum of 1927 when the station is connected with stations of the western network of arcs of the readjusted first-order triangulation by continuous triangulation or traverse computed on the Clarke spheroid of 1866, as expressed in meters.

### GEOGRAPHIC POSITIONS OF BOUNDARY TURNING POINTS DEFINING THE INTERNATIONAL BOUNDARY THROUGH LAKE OF THE WOODS

\* The geographic coordinates used by the two Governments in the treaty of 1925 to define the location of this point are latitude 49° 23' 04".49, longitude 95° 06' 11".61. These coordinates were based on the original North American datum which, since the treaty of 1925, has been superseded by the North American datum of 1927, the geodetic datum on which all geographic positions of this section of the international boundary line are based.

We certify that the foregoing is a true and accurate description and definition of the section of the international boundary line between the United States of America and the Dominion of Canada from the Northwesternmost Point of Lake of the Woods to Lake Superior, as reestablished by the commissioners and as marked by them on the quadruplicate sets of thirty-six accurate modern maps submitted with this report, in accordance with the provisions of Article V of the treaty between the United States and Great Britain signed at Washington, April 11, 1908, and of Article I of the treaty between the United States and His Britannic Majesty in respect of the Dominion of Canada, signed at Washington, February 24, 1925.

Washington, October 27, 1931.

His Britannic Majesty's Commissioner.

United States Commissioner.

### CONCLUSION

It is of importance to note that the section of the international boundary line from the Northwesternmost Point of Lake of the Woods to Lake Superior as now established under the provisions of existent treaties is geodetically fixed, and likewise defined, in terms of a geodetic datum common to the two countries in interest. Regardless therefore of changes which may take place in the shore lines of the boundary waterways, and irrespective of the deterioration or displacement of the boundary monuments and reference monuments, the permanency of the position of the line is henceforth assured.

In accomplishing the results set forth herein the commissioners have had the close cooperation and assistance of other departments and agencies of the two Governments. They refer particularly to the geodetic work done jointly by the Geodetic Survey of Canada and the United States Coast and Geodetic Survey in establishing the first-order control for the boundary triangulation; to the excellent work done for the commission by the United States Geological Survey in the printing of the boundary maps; to the cooperation of the International Joint Commission in the free exchange of survey data pertaining to Lake of the Woods and Rainy Lake; and to the many courtesies extended by the customs and immigration officials of both countries during the progress of the field work.

The commissioners desire to express their appreciation of the efficient and conscientious services of all of their associates who have taken part in the work. They are particularly indebted to Mr. Jesse Hill, engineer to the United States section of the commission, to Mr. J. A. Pounder, D. L. S., engineer to the Canadian section of the commission, to Mr. R. N. Ashmun, mathematician, Mr. Frank H. Brundage, topographic engineer, and Mr. Edward Rausch, cartographer, of the United States section of the commission, and to Mr. G. T. Prinsep, D. L. S., and Mr. D. F. Chisholm of the Canadian section of the commission. The competent and painstaking work done by these men is worthy of the highest commendation.

It is with regret that the commissioners have to record the loss to the two Governments, during the later years of the work, of former Commissioners J. J. McArthur and E. Lester Jones. Mr. McArthur died April 14, 1925, and Colonel Jones died April 9, 1929.

It is most gratifying to state that throughout the course of the work of carrying out the provisions of the boundary treaties the most cordial relations have existed between the commissioners, and that their duties have been performed in a spirit of hearty cooperation.

pael

His Britannic Majesty's Commissioner.

Tames

United States Commissioner.

Washington, October 27, 1931.

### APPENDIX I

### HISTORICAL SKETCH OF THE EARLY EXPLORATIONS OF THE REGION ALONG THE INTERNATIONAL BOUNDARY FROM LAKE SUPERIOR TO LAKE OF THE WOODS

The first white men of record to explore the region adjacent to the boundary between Ontario and Minnesota were Medard Chouart, Sieur des Groseilliers,<sup>1</sup> and his brother-in-law, Pierre Esprit Radisson. Groseilliers was a French fur trader of wide experience who in early life had been a helper in the Jesuit missions to the Indians. Radisson, when a boy, had been captured by the Iroquois and adopted into their tribe, and had lived with them about a year before making his escape. Both men were therefore well fitted for explorations in a country inhabited only by Indians.

It is probable that Groseilliers and Radisson were the first white men to traverse the region of the upper Mississippi River and to explore the southern shore of Lake Superior, almost to the site of the present city of Duluth.<sup>2</sup> Their ambition "to travell and see countreys," <sup>3</sup> as Radisson expresses it in his account of his second "voyage," carried them among many Indian tribes from whom they gained much information regarding the geography of the northwest, particularly of the regions from which the best fur could be obtained. For several years, probably between 1654 and 1660,<sup>4</sup> they traded and hunted near the south shore of Lake Superior, penetrating the interior as far west as the country near the headwaters of the Mississippi. Of their wanderings in northern Minnesota, probably in the summer of 1655, Radisson says:

We weare 4 moneths in our voyage without doeing any thing but goe from river to river. We mett severall sorts of people. We conversed with them, being long time in alliance with them. By the persuasion of som of them we went into the great river that divides itselfe in 2 \* \* \*.

Historians differ as to what river Radisson refers; some think it was the Mississippi.

They returned to Quebec in 1656 and again in 1660 <sup>5</sup> with valuable cargoes of furs. In 1660, however, the unjust treatment which they considered that they had received from the Governor of Quebec and from the French Government caused them to offer their services to the English,<sup>6</sup> which after some delay were accepted. Finally, in 1668, a voyage was made by Groseilliers from London to Hudson Bay where he

#### APPENDIX I

wintered at the mouth of the Rupert River and collected a cargo of furs. So successful was this voyage that after his return to England in 1669, a royal charter was granted to the supporters of the enterprise, under the title of "the Governor and Company of Adventurers of England trading into Hudson's Bay," giving them exclusive rights of trade and absolute control over the territory adjacent to Hudson Bay, an event which was to have a profound effect upon the history of the northern part of North America.

Meanwhile, in the regions to the south, other explorers were penetrating into unknown territory, always with the idea of discovering a practicable route to India by way of the "Western Sea."

Beginning in 1678, Daniel Greysolon, Sieur du Lhut,<sup>7</sup> after whom the city of Duluth, Minn., was named, spent some 30 years in exploration principally in the Lake Superior region. He penentrated the wilderness farther west than any white man of his time, probably to the country west of Lake of the Woods.<sup>8</sup> He established a trading post near the present site of Port Arthur and Fort William, Ontario, as early as 1683, the first of its kind near the international boundary between Minnesota and Ontario.

The first explorer to traverse any part of the Minnesota-Ontario boundary was probably Jacques de Noyon, a native of Three Rivers, Quebec. As told in an official report of the Intendant Bégon, written at Quebec, November 12, 1716, and published in the Margry Papers (Vol. VI, pp. 495–498), De Noyon while in search of the "Western Sea," ascended the Kaministikwia River about the year 1688. Following a chain of lakes with many portages, he came by way of Seine River to Rainy Lake and spent the winter near the foot of the lake or on the banks of Rainy River. The following spring he descended Rainy River to Lake of the Woods. His description of the river and the region at its mouth leaves no doubt as to the identity of this stream.<sup>9</sup>

In 1717, Lieut. Zacharie Robutel de La Noüe followed the route taken by De Noyon as far as Rainy Lake but probably penetrated no farther west.<sup>10</sup>

The route from Lake Superior to Rainy Lake by way of Pigeon River appears to have been known as early as 1722, as is shown by a reference to that route in an official letter dated Quebec, October 27, 1722, published in the Margry Papers.<sup>11</sup>

In 1731 Pierre Gautier de Varennes, Sieur de la Vérendrye,<sup>12</sup> began a series of explorations that were continued until his death in 1749. On his first expedition he took with him a party of about 50 men, which included his three sons and his nephew. Arriving at the western end of Lake Superior in the summer of 1731, he decided to follow the Pigeon River route which, with the chain of lakes to the westward, later became part of the principal route of the fur traders of the Northwest Company between Montreal and Fort Garry (Winnipeg) and eventually became part of the international boundary.

#### HISTORICAL SKETCH

The main party prepared to winter on Lake Superior at the mouth of the Kaministikwia River while an advance party under the nephew, La Jemeraye, went ahead to the western end of Rainy Lake. There, on what is now called Pithers Point, they built a trading post which they named "Fort St. Pierre" in honor of La Vérendrye.

The following spring the furs that had been collected at Fort St. Pierre were sent back to Montreal and the main party joined La Jemeraye on Rainy Lake. Leaving a few men to look after the trade with the Indians, the others descended Rainy River, crossed Lake of the Woods, and, on the south side of what is now known as Northwest Angle Inlet, built Fort St. Charles,<sup>13</sup> the first trading post, and in fact the first habitation of white men, ever built on Lake of the Woods. During the period covered by La Vérendrye's explorations farther westward, Fort St. Pierre and Fort St. Charles were maintained as trading posts and bases for the exploring parties.

Members of La Vérendrye's party were the first white men to descend the Winnipeg River and the first to see Lake Winnipeg. They were also the first white men to explore the Turtle Mountains, on the international boundary, between North Dakota and Manitoba. Their search for the western sea, which was of more concern to La Vérendrye than the fur trade, was cut short by his death in 1749, when he was preparing for further explorations on the Saskatchewan River.

The official successors of La Vérendrye, first St. Pierre and later De La Corne, continued the exploration of the Saskatchewan River, but, lacking the zeal of La Vérendrye, they added little to the geographical knowledge of the west. The cession of Canada to England in 1763 brought to a close the explorations under French auspices. From that time on such expeditions were as a rule headed by English-speaking explorers.

The first of these appears to have been James Finlay,<sup>14</sup> an independent fur trader from Montreal, who penetrated the country as far west as the Saskatchewan River in 1767. Thomas Curry, another of the small competitors of the Hudson Bay Co., appears to have accompanied Finlay or to have followed him a few years later.

The first of the English-speaking explorers to leave an account of his wanderings was Jonathan Carver of New England,<sup>15</sup> who by the canoe route through Green Bay and Fox, Wisconsin, and Mississippi Rivers reached northern Minnesota in 1766, where he wintered among the Sioux Indians. He visited the Grand Portage, the fur-trade route from Lake Superior to Pigeon River, but gave up his purpose of penetrating farther west and returned to New England after an absence of over two years on this trip. He explored no new territory and the value of his efforts lies chiefly in the thorough description of the region recorded in his Travels Through the Interior Parts of North America, which was published at London in 1778, ran through 23 editions, and was translated into three foreign languages.

<sup>&</sup>lt;sup>13</sup> The site of Fort St. Charles was recovered in 1908 by members of the faculty of the College of St. Boniface, Manitoba.

#### APPENDIX I

The next of the English traders to add to geographic knowledge of the boundary waterways, was Alexander Henry the elder, a native of New Brunswick, N. J., but engaged in the fur trade tributary to Montreal. He traversed the canoe route westward along the present boundary in 1775 and returned by the same route the following year. In 1809, he published his Travels and Adventures in Canada and the Indian Territories, Between the Years 1760 and 1776.

Sir Alexander Mackenzie, the first white man to reach the Pacific Ocean overland through British America and also the first to reach the Arctic Ocean by way of the river which bears his name, was the next of the English explorers to traverse the boundary waters. In his Voyages from Montreal, etc., he describes in great detail the fur trade of the years 1789 to 1793 and the water route from Lake Superior to Lake Winnipeg. The lakes and streams as he pictures them will be easily recognized by the present-day traveler in this region. He describes the arrival <sup>16</sup> of a fur-trader's "brigade" at the Grand Portage post <sup>17</sup> on the shore of Lake Superior southwest of the mouth of Pigeon River, and also the trip across the 8-mile portage from Grand Portage to a point on Pigeon River below Partridge Falls. He describes the boundary waterways from this point to Lake of the Woods, together with the fur traders' means of transportation, as follows:

The trade from the Grande Portage, is, in some particulars, carried on in a different manner with that from Montreal. The canoes used in the latter transport are now too large for the former, and some of about half the size are procured from the natives, and are navigated by four, five, or six men, according to the distance which they have to go. They carry a lading of about thirty-five packages, on an average; of these twenty-three are for the purpose of trade, and the rest are employed for provisions, stores, and baggage. In each of these canoes are a foreman and steersman; the one to be always on the look out, and direct the passage of the vessel, and the other to attend the helm. They also carry her, whenever that office is necessary. The foreman has the command, and the middle-men obey both; the latter earn only two-thirds of the wages which are paid the two former. Independent of these a conductor or pilot is appointed to every four or six of these canoes, whom they are all obliged to obey; and is, or at least is intended to be, a person of superior experience, for which he is proportionably paid.

In these canoes, thus loaded, they embark at the North side of the portage, on the river Au Tourt [Pigeon River], which is very inconsiderable; and after about two miles of a Westerly course, is obstructed by the Partridge Portage, six hundred paces long. In the spring this makes a considerable fall, when the water is high, over a perpendicular rock of one hundred and twenty feet. From thence the river continues to be shallow, and requires great care to prevent the bottom of the canoe from being injured by sharp rocks, for a distance of three miles and an half to the Prairie, or Meadow, when half the lading is taken out, and carried by part of the crew, while two of them are conducting the canoe among the rocks, with the remainder, to the Carreboeuf Portage, three miles and an half more, when they unload and come back two miles, and embark what was left for the other hands to carry, which they also land with the former; all of which is carried six hundred and eighty paces, and the canoe led up against the rapid. From hence the water is better calculated to carry canoes, and leads by a winding course to the North of West three miles to the Outard [Fowl] Portage, over which the canoe, and everything in her, is carried for two thousand four hundred paces. At the further end is a very high hill to descend, over which hangs a rock upwards of seven hundred feet high. Then succeeds the Outard Lake [North and South Fowl Lakes], about six miles long, lying in a North-West

<sup>&</sup>lt;sup>16</sup> Voyages from Montreal (Reprint of 1902) Vol. I, p. lxxvii.

<sup>&</sup>lt;sup>17</sup> A detailed description of Grand Portage is given on p. 200. See also Thompson's Narrative, J. B. Tyrrell. ed., p. 169.

HISTORICAL SKETCH

course, and about two miles wide in the broadest part. After passing a very small rivulet. they come to the Elk [Moose] Portage, over which the canoe and lading are again carried one thousand one hundred and twenty paces; when they enter the lake of the same name [Moose Lakel, which is an handsome piece of water, running North-West about four miles, and not more than one mile and an half wide.<sup>18</sup> They then land at the Portage de Cerise [Great Cherry Portage], over which, and in the face of a considerable hill, the canoe and cargo are again transported for one thousand and fifty paces. This is only separated from the second Portage de Cerise [Vaseux Portage] by a mud-pond [Vaseux Lake] (where there is plenty of water lilies), of a quarter of a mile in length; and this is again separated by a similar pond [Fan Lake] from the last Portage de Cerise [Lesser Cherry Portage], which is four hundred and ten paces. Here the same operation is to be performed for three hundred and eighty paces. They next enter on the Mountain Lake, running North-West by West six miles long, and about two miles in its greatest breadth. In the centre of this lake, and to the right, is the Old Road, by which I never passed; but an adequate notion may be formed of it from the road I am going to describe, and which is universally preferred. This is first, the small new portage over which everything is carried for six hundred and twenty-six paces, over bills and gullies; the whole is then embarked on a narrow line of water [Watap Lake], that meanders South-West about two miles and an half. It is necessary to unload here, for the length of the canoe, and then proceed West half a mile, to the new Grande Portage [Long Portage], which is three thousand one hundred paces in length, and over very rough ground, which requires the utmost exertions of the men, and frequently lames them: from hence they approach the Rose Lake, the portage of that name being opposite to the junction of the road from the Mountain Lake. They then embark on the Rose Lake, about one mile from the East end of it, and steer West by South, in an oblique course, across it two miles; then West-North-West, passing the Petite Peche to the Marten Portage three miles. In this part of the lake the bottom is mud and slime, with about three or four feet of water over it; and here I frequently struck a canoe pole of twelve feet long, without meeting any other obstruction than if the whole were water: it has, however, a peculiar suction or attractive power, so that it is difficult to paddle a canoe over it. There is a small space along the South shore, where the water is deep, and this effect is not felt. In proportion to the distance from this part, the suction becomes more powerful: I have, indeed been told that loaded canoes have been in danger of being swallowed up, and have only owed their preservation to other canoes, which were lighter. I have, myself, found it very difficult to get away from this attractive power, with six men, and great exertion, though we did not appear to be in any danger of sinking.

Over against this is a very high, rocky ridge, on the South side, called Marten Portage, which is but twenty paces long, and separated from the Perche Portage [South Lake Portage], which is four hundred and eighty paces, by a mud-pond [Rat Lake], covered with white lilies. From hence the course is on the lake of the same name [South Lake], West-South-West three miles to the height of land, where the waters of the Dove or Pigeon River terminate, and which is one of the sources of the great St. Laurence in this direction. Having carried the canoe and lading over it, six hundred and seventy-nine paces, they embark on the lake of Hauteur de Terre<sup>19</sup> [North Lake], which is in the shape of an horse-shoe. It is entered near the curve, and left at the extremity of the Western limb, through a very shallow channel, where the canoe passes half loaded for thirty paces with the current, which conducts these waters through the succeeding lakes and rivers, till they discharge themselves by the river Nelson into Hudson's-Bay. The first of these is Lac de pierres á fusil [Gunflint Lake], running West-South-West seven miles long, and two wide, and, making an angle at North-West one mile more, becomes a river [Pine River] for half a mile, tumbling over a rock, and forming a fall and portage, called the Escalier [Little Rock Falls], of fifty-five paces; but from hence it is neither lake or river, but

96030 - 31 - 14

<sup>&</sup>lt;sup>18</sup> Here is a most excellent fishery for white fish, which are exquisite.

<sup>&</sup>lt;sup>19</sup> The route which we have been travelling hitherto leads along the high rocky land or bank of Lake Superior on the left. The face of the country offers a wild scene of huge hills and rocks, separated by stony vallies, lakes, and ponds. Wherever there is the least soil, it is well covered with trees.

possesses the character of both, and runs between large rocks, which cause a current or rapid for about two miles and an half, West-North-West, to the portage of the Cheval du Bois [Blueberry Portage]. Here the canoe and contents are carried three hundred and eighty paces, between rocks; and within a quarter of a mile is the Portage des Gros Pins [Pine Portage], which is six hundred and forty paces over an high ridge. The opposite side of it is washed by a small lake three miles round; and the course is through the East end or side of it, three quarters of a mile North-East, where there is a rapid. An irregular, meandering channel, between rocky banks, then succeeds, for seven miles and an half, to the Maraboeuf Lake, which extends North four miles, and is three quarters of a mile wide, terminating by a rapid and décharge, of one hundred and eighty paces, the rock of Saginaga being in sight, which causes a fall of about seven feet, and a portage of fifty-five paces.

Lake Saginaga takes its names from its numerous Islands. Its greatest length from East to West is about fourteen miles, with very irregular inlets, is nowhere more than three miles wide, and terminates at the small portage of Le Roché, of forty-three paces. From thence is a rocky, stony passage of one mile, to Prairie Portage [Swamp Portage], which is very improperly named, as there is no ground about it that answers to that description, except a small spot at the embarking place at the West end: to the East is an entire bog; and it is with great difficulty that the lading can be landed upon stages, formed by driving piles into the mud, and spreading branches of trees over them. The portage rises on a stony ridge, over which the canoe and cargo must be carried for six hundred and eleven paces. This is succeeded by an embarkation on a small bay, where the bottom is the same as has been described in the West end of Rose Lake, and it is with great difficulty that a laden canoe is worked over it, but it does not comprehend more than a distance of two hundred yards. From hence the progress continues through irregular channels, bounded by rocks, in a Westerly course for about five miles, to the little Portage des Couteaux [Little Knife Portage], of one hundred and sixty-five paces, and the Lac des Couteaux [Knife Lakel, running about South-West by West twelve miles, and from a quarter to two miles wide. A deep bay runs East three miles from the West end, where it is discharged by a rapid river, and after running two miles West, it again becomes still water. In this river are two carryingplaces, the one fifteen, and the other one hundred and ninety paces. From this to the Portage des Carpes [Carp Portage] is one mile North-West, leaving a narrow lake on the East that runs parallel with the Lake des Couteaux [Knife Lake], half its length, where there is a carryingplace, which is used when the water in the river last mentioned is too low. The Portage des Carpes [Carp Portage] is three hundred and ninety paces, from whence the water spreads irregularly between rocks, five miles North-West and South-East to the portage of Lac Bois Blanc [now called Prairie Portage], which is one hundred and eighty paces. Then follows the lake of that name [Basswood Lake], but I think improperly so called, as the natives name it the Passeau Minac Sagaigan, or Lake of Dry Berries.

Before the small pox ravaged this country, and completed, what the Nodowasis, in their warfare, had gone far to accomplish, the destruction of its inhabitants, the population was very numerous: this was also a favourite part, where they made their canoes, &c. the lake abounding in fish, the country round it being plentifully supplied with various kinds of game, and the rocky ridges, that form the boundaries of the water, covered with a variety of berries.

When the French were in possession of this country, they had several trading establishments on the islands and banks of this lake. Since that period, the few people remaining, who were of the Algonquin nation, could hardly find subsistence; game having become so scarce, that they depended principally for food upon fish, and wild rice which grows spontaneously in these parts.

This lake is irregular in its form, and its utmost extent from East to West is fifteen miles; a point of land, called Point au Pin, jutting into it, divides it into two parts: it then makes a second angle at the West end, to the lesser Portage de Bois Blanc, two hundred paces in length. This channel is not wide, and is intercepted by several rapids in the course of a mile: it runs West-North-West to the Portage des Pins, over which the canoe and lading is again carried four hundred paces. From hence the channel is also intercepted by very dangerous rapids for two miles Westerly, to the point [portage] of Pointe du Bois, which is two hundred and eighty paces. Then succeeds the portage of Lake Croche [Crooked Lake] one mile more, where the carrying-place is eighty paces, and is followed by an embarkation on that lake, which takes its name from its figure. It extends eighteen miles, in a meandering form, and in a westerly direction; it is in general very narrow, and at about two-thirds of its length becomes very contracted, with a strong current.

Within three miles of the last Portage is a remarkable rock, with a smooth face, but split and cracked in different parts, which hang over the water. Into one of its horizontal chasms a great number of arrows have been shot, which is said to have been done by a war party of the Nadowasis or Sieux, who had done much mischief in this country, and left these weapons as a warning to the Chebois or natives, that, notwithstanding its lakes, rivers, and rocks, it was not inaccessible to their enemies.

Lake Croche [Crooked Lake] is terminated by the Portage de Rideau, four hundred paces long, and derives its name from the appearance of the water, falling over a rock of upwards of thirty feet. Several rapids succeed, with intervals of still water, for about three miles to the Flacon portage [Bottle Portage], which is very difficult, is four hundred paces long, and leads to the Lake of La Croix, so named from its shape. It runs about North-West eighteen miles to the Beaver Dam, and then sinks into a deep bay nearly East. The course to the Portage is West by North for sixteen miles more from the Beaver Dam, and into the East bay is a road which was frequented by the French, and followed through lakes and rivers until they came to Lake Superior by the river Caministiquia, thirty miles East of the Grand Portage.

Portage la Croix is six hundred paces long: to the next portage is a quarter of a mile, and its length is forty paces; the river winding four miles to Vermillion Lake, which runs six or seven miles North-North-West, and by a narrow strait communicates with Lake Namaycan, which takes its name from a particular place at the foot of a fall, where the natives spear sturgeon: Its course is about North-North-West and South-South-East, with a bay running East, that gives it the form of a triangle: its length is about sixteen miles to the Nouvelle Portage. The discharge of the lake is from a bay on the left, and the portage one hundred and eighty paces, to which succeeds a very small river, from whence there is but a short distance to the next Nouvelle Portage, three hundred and twenty paces long. It is then necessary to embark on a swamp, or overflowed country, where wild rice grows in great abundance. There is a channel or small river in the centre of this swamp, which is kept with difficulty, and runs South and North one mile and a half. With deepening water, the course continues North-North-West one mile to the Chaudiere Portage, which is caused by the discharge of the waters running on the left of the road from Lake Naymaycan, which used to be the common route, but that which I have described is the safest as well as shortest. From hence there is some current though the water is wide spread, and its course about North by West three miles and an half to the Lac de la Pluie [Rainy Lake], which lies nearly East and West; from thence about fifteen miles is a narrow strait that divides the lake into two unequal parts, from whence to its discharge is a distance of twenty-four miles. There is a deep bay running North-West on the right, that is not included, and is remarkable for furnishing the natives with a kind of soft, red stone of which they make their pipes; it also affords an excellent fishery both in the summer and winter; and from it is an easy, safe, and short road to the Lake du Bois, (which I shall mention presently) for the Indians to pass in their small canoes, through a small lake and on a small river, whose banks furnish abundance of wild rice. The discharge of this lake is called Lake de la Pluie River, at whose entrance there is a rapid, below which is a fine bay, where there had been an extensive picketed fort and building when possessed by the French; the site of it is at present a beautiful meadow, surrounded with groves of oaks. From hence there is a strong current for two miles, where the water falls over a rock twenty feet [Koochiching Falls], and, from the consequent turbulence of the water, the carrying-place, which is three hundred and twenty paces long, derives the name of Chaudiere. Two miles onward is the present trading establishment, situated on an high bank on the North side of the river, in 48. 37. North latitude.

Here the people from Montreal come to meet those who arrive from the Athabasca country, as has been already described, and exchange lading with them. This is also the residence of the first chief, or Sachem, of all the Algonquin tribes, inhabiting the different parts of this country. He is by distinction called Nectam, which implies personal pre-eminence. Here also the elders meet in council to treat of peace or war.

This is one of the finest rivers in the North-West, and runs a course West and East one hundred and twenty computed miles; but in taking its course and distance minutely I make it only eighty. Its banks are covered with a rich soil, particularly to the North, which, in many parts, are clothed with fine open groves of oak, with the maple, the pine, and the cedar. The Southern bank is not so elevated, and displays the maple, the white birch, and the cedar, with the spruce, the alder, and various underwood. Its waters abound in fish, particularly the sturgeon, which the natives both spear and take with drag-nets. But notwithstanding the promise of this soil, the Indians do not attend to its cultivation, though they are not ignorant of the common process, and are fond of the Indian corn, when they can get it from us.

Though the soil at the fort is a stiff clay, there is a garden, which, unassisted as it is by manure, or any particular attention, is tolerably productive.

We now proceed to mention the Lake du Bois [Lake of the Woods], into which this river discharges itself in latitude 49. North, and was formerly famous for the richness of its banks and waters, which abounded with whatever was necessary to a savage life. The French had several settlements in and about it; but it might be almost concluded that some fatal circumstance had destroyed the game, as war and the small pox had diminished the inhabitants, it having been very unproductive in animals since the British subjects have been engaged in travelling through it; though it now appears to be recovering its pristine state. The few Indians who inhabit it might live very comfortably, if they were not so immoderately fond of spirituous liquors.

This lake is also rendered remarkable, in consequence of the Americans having named it as the spot, from which a line of boundary, between them and British America, was to run West, until it struck the Mississippi; which, however, can never happen, as the North-West part of the Lake du Bois is in latitude 49. 37. North, and longitude 94. 31. West, and the Northernmost branch of the source of the Mississippi is in latitude 47. 38. North, and longitude 95. 6. West, ascertained by Mr. Thomson, astronomer to the North-West Company, who was sent expressly for that purpose in the spring of 1798. He, in the same year, determined the Northern bend of the Missisoury to be in latitude 47. 32. North, and longitude 101. 25. West; and, according to the Indian accounts, it runs to the south of West, so that if the Missisoury were even to be considered as the Mississippi, no Western line could strike it.

It does not appear to me to be clearly determined what course the Line is to take, or from what part of Lake Superior it strikes through the country to the Lake du Bois: were it to follow the principal waters to their source, it ought to keep through Lake Superior to the River St. Louis, and follow that river to its source; close to which is the source of the waters falling into the river of Lake la Pluie, which is a common route of the Indians to the Lake du Bois: the St. Louis passes within a short distance of a branch of the Mississippi, where it becomes navigable for canoes. This will appear more evident from consulting the map; and if the navigation of the Mississippi is considered as of any consequence, by this country, from that part of the globe, such is the nearest way to get at it.

But to return to our narrative. The Lake du Bois is, as far as I could learn, nearly round, and the canoe course through the centre of it among a cluster of islands, some of which are so extensive that they may be taken for the main land. The reduced course would be nearly South and North. But following the navigating course, I make the distance seventy-five miles, though in a direct line it would fall very short of that length. At about two-thirds of it there is a small carrying-place, when the water is low. The carrying-place out of the lake is on an island, and named Portage du Rat, in latitude 49. 37. North and longitude 94¼. West, it is about fifty paces long. The lake discharges itself at both ends of this island, and forms the River Winipic, which is a large body of water, interspersed with numerous islands, causing various channels and interruptions of portages and rapids. HISTORICAL SKETCH

Much information regarding conditions along the waterways traversed by the canoes of the trading companies is made available to us by the journal of Alexander Henry the younger, fur trader of the Northwest Company and a nephew of the earlier Alexander Henry, who had traversed the boundary in 1775. In the journal of the younger Henry, edited and condensed by Dr. Elliott Coues, his trip in 1800 along the water boundary <sup>20</sup> is described in much detail.

David Thompson, whose work as surveyor of this part of the international boundary is described in detail in Appendix III of this report, has been called by Dr. Elliott Coues "the greatest geographer of his day in British America, and the maker of what was then by far its greatest map."<sup>21</sup> He was from 1784 to 1797 an employee of the Hudson Bay Company. Afterwards he was the principal geographer of the Northwest Company and finally he was astronomer and surveyor for the British section of the International Boundary Commission under Articles VI and VII of the treaty of Ghent.

H. H. Bancroft says of him: "In the westward explorations of the Northwest Company no man performed more valuable service, or estimated his achievement more modestly."

It was Thompson's determination of the latitude and longitude of the source of the Mississippi River that led to the change in the description of that part of the international boundary which, in the treaty of 1783, was required to run from the most northwestern part of Lake of the Woods "on a due west course to the river Mississippi." Thompson says <sup>22</sup> regarding this impossible line:

At the time of the treaty, 1783, the northwest point of the Lake of the Woods was supposed to lie in about 50° of north latitude and the head of the Mississippi somewhat farther north. \* \* \* In the spring of 1797 [1798], I was on the headwaters of the Mississippi, and by astronomical observations determined its head to be in the latitude and longitude laid down in the map, making a difference of 2° and 20' more south than the northwest point of the Lake of the Woods.

Later treaties substituted a determinable line for the line of the treaty of 1783 that Thompson's observations showed was impossible.

In the published narrative of Thompson's explorations the editor, Mr. J. B. Tyrrell, himself an explorer, geologist, and surveyor of note, says of Thompson's work: <sup>23</sup>

His surveys were not merely rough sketches sufficient to give some idea of the general character of the country, but were careful traverses made by a master in the art, short courses being taken with a magnetic compass, the variation of which was constantly determined, distances being carefully estimated by the time taken to travel them, and the whole checked by numerous astronomical observations for latitude and longitude.

Thompson, after leaving the service of the Hudson Bay Company in 1797, immediately joined the Northwest Company at the post of Alexander Fraser

<sup>&</sup>lt;sup>20</sup> New Light on the Early History of the Greater Northwest, vol. 1, ch. 2.

<sup>&</sup>lt;sup>21</sup> New Light on the Early History of the Greater Northwest, vol. 1, p. xxii.

<sup>&</sup>lt;sup>22</sup> Report of the International Joint Commission on the Lake of the Woods Reference, p. 133.

<sup>&</sup>lt;sup>23</sup> Thompson's Narrative of His Explorations in Western America, pp. 1x and 1xi.

on Reindeer River. His general instructions from the Northwest Company are outlined in his narrative as follows: <sup>24</sup>

And wherever I could mark the line of the 49th parallel of Latitude [I was told] to do so, especially on the Red River. Also, if possible to extend my surveys to the Missisourie River; visit the village of the ancient agricultural Natives who dwelt there; enquire for fossil bones of large animals, and any monuments, if any, that might throw light on the ancient state of the unknown countries I had to travel over and examine.

Within a few days after joining the Northwest Company Thompson began his first journey to Grand Portage, traveling by way of Winnipeg River and the waterways of the international boundary and making a survey of the route as was his custom.

Of his surveying and astronomical instruments for this first expedition for the Northwest Company he says: <sup>25</sup>

My instruments were a Sextant of ten inches radius, with Quicksilver and parallel glasses, an excellent Achromatic Telescope; a lesser for common use; drawing instruments, and two Thermometers; all by Dollond.

After a brief rest at Grand Portage he started westward on a journey to the headwaters of the Assiniboine and Red Rivers. He followed the international water boundary as far as the northern part of Lake of the Woods, visiting Rainy Lake House, the first post of the Northwest Company, which, he says, was one-half mile below what are now called Koochiching Falls.

Of the waterways through which the international boundary passes Thompson on his first trip westward from Grand Portage writes: <sup>26</sup>

We proceeded over the Great Carrying Place, the length of which is eight miles and twenty yards in a north west direction to the Pigeon River, which is about three hundred feet above Lake Superior: this was carried over by the Men in five day's hard labor. From this to the Height of Land the distance is thirty-eight miles, including twelve carrying places, of five and one-half miles of carriage, which makes severe labor for the canoe men: A short distance south eastward of the Height of Land in the crevices of a steep rock, about twenty feet above the water of a small Lake are a number of Arrows which the Sieux Indians shot from their Bows, the Arrows are small and short. The Chippaways, the Natives[,] say: these Arrows are the voice of the Sieux and tell us, "We have come to war on you, and not finding you, we leave these in the rocks in your country, with which we hoped to have pierced your bodies." This was about the year 1730.

Of the Lake of the Woods region he has the following tragic story to relate:

It seems that when the French from Canada first entered these furr countries, every summer a Priest came to instruct the Traders and their men in their religious duties, and preach to them \* \* \*. He had collected about twenty Men with a few of the Natives upon a small Island, of rock; and while instructing them, a large war party of Sieux Indians came on them and began the work of death; not one escaped; whilst this was going on, the Priest kept walking backwards and forwards on a level of rock of about fifty yards in length, with his eyes fixed on his book, without seeming to notice them; at length as he turned about, one of them sent an arrow through him and he fell dead. At this deed the rocky isle trembled and shook; the Sieux Indians became afraid, and they retired without stripping the dead, or taking their scalps. These Isles, of which there are three, are to this day called "The Isles of the Dead"

#### HISTORICAL SKETCH

(Les isles aux Morts). Such was the relation an old Canadian gave me, and which he said he had learned of the Furr Traders who then resided among those Indians.<sup>27</sup>

In 1798 Thompson returned east, starting in midwinter, passing Turtle Lake, which he named as the source of the Mississippi, and on to Lake Superior and Sault Ste. Marie. In the summer of this year he again made the trip westward along what is now the international boundary, after which journey he spent practically all of his time until the summer of 1812 in the country west of Lake of the Woods.

During this period he extended his explorations and surveys to the Pacific Ocean, upon reaching which he writes:

Thus I have fully completed the survey of this part of North America from sea to sea, and by almost innumerable astronomical Observations have determined the positions of the Mountains, Lakes and Rivers, and other remarkable places on the northern part of this Continent; the Maps of all of which have been drawn, and laid down in geographical position, being now the work of 27 years.

From 1816 to 1826 Thompson was engaged in surveying and defining the boundary line, on the part of Great Britain, between Canada and the United States. (See Appendix III.) He was employed in 1817 on the St. Lawrence, and thence proceeding westward around the shores of the Great Lakes he reached Northwest Angle Inlet of Lake of the Woods in 1824 where he made surveys and observations which were used the following year by Dr. J. L. Tiarks, astronomer for the British Government, in the determination of the "most northwestern point" of Lake of the Woods. (See page 107.)

The early history of this water boundary would be incomplete without a reference to the fur companies and their part in the development of this region.

Perhaps the first trading post of any permanence in the vicinity of our international boundary was that of Du Lhut, who did so much to establish good will and promote trade between the French and the natives. He established a post during the winter of 1683–84 near the present city of Port Arthur. Fort St. Pierre at the foot of Rainy Lake and Fort St. Charles on the west shore of Lake of the Woods, established by La Vérendrye in 1731 and 1732, were the first posts on these lakes. All of these early posts were short lived, however.

Grand Portage at the Lake Superior end of the carrying place to Pigeon River, when Carver visited it in 1767, was already an important center of the fur trade. The post as it existed some years later is described by Sir Alexander Mackenzie in his General History of the Fur Trade from Canada to the Northwest (part of his Voyages from Montreal). He writes: <sup>29</sup>

At length they all arrive at the Grande Portage, which is one hundred and sixty leagues from St. Mary's Coastways, and situated on a pleasant bay on the north side of the lake, in latitude 48. North and longitude 90. West from Greenwich. \* \* \*

At the entrance of the bay is an island which screens the harbour from every wind except the South. \* \* \* The bottom of the bay, which forms an amphitheatre, is cleared of

<sup>&</sup>lt;sup>27</sup> This appears to be a somewhat legendary account of the massacre of Jean de la Vérendrye, Father Aulneau, and their party near Fort St. Charles. See Pathfinders of the Great Plains, p. 37; L. J. Burpee.

<sup>&</sup>lt;sup>29</sup> Mackenzie, Sir Alexander, Voyages from Montreal, p. xl, et. seq.

wood and enclosed; and on the left corner of it, beneath an hill, three or four hundred feet in height, and crowned by others of a still greater altitude, is the fort, picketed in with cedar pallisadoes, and inclosing houses built with wood and covered with shingles. They are calculated for every convenience of trade, as well as to accommodate the proprietors and clerks during their short residence there. The Northmen <sup>30</sup> live under tents; but the more frugal pork-eater <sup>31</sup> lodges beneath his canoe. \* \* \*

When they are arrived at the Grande Portage, which is near nine miles over, each of them has to carry eight packages of such goods and provisions as are necessary for the interior country. \* \* \*

Having finished this toilsome part of their duty, if more goods are necessary to be transported they are allowed a Spanish dollar for each package: and so inured are they to this kind of labour, that I have known some of them set off with two packages of ninety pounds each, and return with two others of the same weight, in the course of six hours, being a distance of eighteen miles over hills and mountains.

Doctor Coues in his New Light on the History of the Greater Northwest describes the Grand Portage post as follows:

The N. W. establishment there, before and after 1800, was a stockaded post, 24 x 30 rods, on the edge of the bay and under the hill; it was long a famous rendezvous of the Northmen, who were assembled sometimes to the number of more than a thousand. It was abandoned in 1803,<sup>32</sup> headquarters being then removed to Kaministiquia (Fort William). In 1785 the old fort was in charge of Mr. Croutier, with Mr. Givins of Montreal as clerk. In the spring of that year Gregory, McLeod & Co. started a rival post in charge of Pierre Lanniau or L'Anneau, with Roderick McKenzie as clerk, and 18 voyageurs. The X. Y. Co. post was built in 1797, about 200 rods from that of the N. W. Co., across a small stream which makes into the bay. \* \* \* Fort Charlotte was the N. W. Co. post at the other end of the portage on Pigeon River.

The following notes on the fur trade in the region of the larger boundary lakes are taken from the very able history of the region in the Final Report of the International Joint Commission on the Lake of the Woods Reference (pp. 123 to 131).

The first trading establishment of the Northwest Company in the Lake of the Woods district was that known as Rainy Lake House, or Fort of Lake La Pluie. It is uncertain when this post was built, but in the journal of John McDonnell <sup>33</sup> of 1793 it is referred to as follows:

In sight of the fort of Lake La Pluie is the Kettle Fall, causing a portage. The fort stands on the top of a steep bank of the river. It has two wooden bastions in front flanking the gate.

David Thompson, who visited the post in 1797, says <sup>34</sup> it stood half a mile below the falls. On the other hand, Alexander Mackenzie,<sup>35</sup> in his General History of the Fur Trade (1801), described it as standing 2 miles below the falls, "situated on a high bank on the north side of the river, in 48. 37. north latitude. Here," he adds, "the people from Montreal come to meet those who arrive from the Athabasca country and exchange lading with them."

In 1799 Peter Grant was in charge of the post, and was succeeded by Dr. John McLoughlin, in later years, after the amalgamation of the Northwest and Hudson's Bay Companies, one of the leaders of the fur trade on the Pacific coast. In any event, Rainy Lake House must have

<sup>32</sup> This movement from Grand Portage to Fort William was made during the years 1801 to 1807; Burpee, Search for the Western Sea, p. 388.

<sup>&</sup>lt;sup>30</sup> "Northmen" or "winterers" was the name given to the parties that traded directly with the Indians and who wintered at Grande Portage and the region to the north and west.

<sup>&</sup>lt;sup>31</sup> The "pork-eaters" or "goers and comers" were the clerks, guides, and canoe-men hired by the Northwest Company to go and come between Montreal and Grande Portage or Fort William with the canoe "brigades" that brought supplies to the traders and returned with furs.

been built some time before 1793 and after 1775, as it is not mentioned in Alexander Henry's Travels and Adventures.

The Hudson's Bay Company also built a post on Rainy River about where the town of Fort Frances stands to-day.

It was rebuilt many years afterwards and named Fort Frances, after the wife of Sir George Simpson, governor of the company. In fact, the Hudson's Bay Company must have had more than one trading post on Rainy River before 1800, for in his journal of that year Alexander Henry writes: <sup>36</sup>

We camped below Manitou Rapids \* \* \*. At daybreak we embarked and passed the old H. B. Co. establishment, which has been abandoned for several years. Soon after we came down the Long Sault. At 12 o'clock passed Rapid River, at 2 o'clock passed another old H. B. Co. establishment, and soon after came to the entrance of Lake of the Woods.

Jesuit missionaries accompanied La Vérendrye into the Lake of the Woods country and did what they could to Christianize the natives. Many years later Protestant missionaries attempted the same field, as appears from the following entry in the minutes of the council of the Hudson's Bay Company, held at Norway House in 1842:

That a commissioned gentleman's allowance be forwarded from York Factory to each of the following Wesleyan missionaries: \* \* \* Mr. Mason, Lac La Pluie.

The first attempt by an American company to enter the fur trade of the then northwestern frontier was made by the old Southwest Company, to which, in the name of Toussaint Pothier, in the winter of 1811 or spring of 1812, a patent was issued for property for a trading post at the Strait of Mackinac. The patent itself was captured by a British party during the War of 1812, and nothing further was apparently done to enter the fur trade in this region until after the war.

Michilimackinac, or Mackinac, as it was afterwards called, was a point of strategic importance from a commercial point of view, and through this post passed the trade from the district of Fond du Lac, so called from a post of that name at the place where the city of Duluth stands to-day. The district of Fond du Lac first consisted of the upper Mississippi posts at Leech Lake, Pokegame Lake, and Sandy Lake, together with the Red Lake post. Later the confines of the district were extended northward to the boundary, to take in the entire United States portion of the Lake of the Woods watershed.<sup>37</sup>

The property and stock of the old Southwest Company was held principally by John Jacob Astor, of New York, and McTavish & Company, of Montreal. In 1815–16 Congress, in hope of excluding foreign competition in the frontier region, enacted a law prohibiting any one not a citizen from engaging in the Indian trade. Soon after Astor bought out the McTavish interest and formed the American Fur Company. The property was taken over in April, 1817, at Montreal, by Ramsay Crooks in behalf of Astor. Shortly after this the American Fur Company purchased from the Northwest Company the posts at the headwaters of the Mississippi, which this company had maintained here for a number of years. This purchase was the first step made by an American company in entering the fur trade on waters flowing into the Lake of the Woods. On June 20, 1817, Crooks writes to William Morrison from St. Marys Falls on Lake Superior:

I came to this place yesterday in the hope of possible meeting with and handing you in person the inclosed letter from Mr. Rocheblave, by which you will perceive the Northwest Company have sold to Mr. John Jacob Astor, of New York, all the interest they hold in the department of Fond du Lac now in your charge. \* \* \*

<sup>36</sup> New Light on the Early History of the Greater Northwest, Vol. I, p. 21.

<sup>37</sup> These notes on the American fur trade are based principally upon information contained in the old letter books of the American Fur Company, 1816 to 1825, photostat copies of which are in the possession of the Wisconsin Historical Society. The manuscript reproductions were, through the courtesy of this society, forwarded to the Minnesota Historical Society of St. Paul for reference. The old letters consist mainly of correspondence from Ramsay Crooks, later president of the American Fur Company, to John Jacob Astor and various others, who were employed by or who furnished goods to this company, and from Robert Stuart, agent of the American Fur Company at Michilimackinac.

#### APPENDIX I

With the property of the Northwest Company, the American Fur Company became heir to the former company's ruthless competition with the Hudson's Bay Company. The law previously passed by Congress was designed to prohibit the engagement in American trade of agents of either of the Canadian companies. It was provided that each trader must be a citizen of the United States and must procure a bonded license from the agent of Indian affairs.

Referring to the early difficulties with the Hudson's Bay Company, then controlled by Lord Selkirk, Crooks writes from Mackinac to Astor on June 23, 1817:

\* \* \* And by indirect advice from Fond du Lac our affairs in that quarter are likely to be more advantageous than we could have expected from the state of that department at the beginning of last winter, and the large stories circulated by the N. W. Co. of the amount of property seized by Lord Selkirk's emissaries, who it now appears, restored all they had taken—the real state of the business, however, can not be known till the arrival of Mr. Morrison, which I look for in 10 or 15 days.

#### And again on July 21, 1817:

All the people of Lake Superior have come out and, with a few exceptions, from almost every quarter. In the aggregate the returns are bad.

Selkirk's emissary, in addition to the destruction of our adventure to Red Lake, did us a most serious injury in sending Messrs. Morrison and Roussain prisoners to Fort William last fall \* \* \* (afterwards returned to their posts). Selkirk sent into that quarter last fall at different times not less than 12 cances and 50 men \* \* \* and, without scruple, introduced the goods which opposed us in the whole department of Fond du Lac, never finding it convenient to consult the collector of the customs or the agent of Indian affairs. \* \* \* We have, however, had the good fortune to thwart most completely his ungenerous designs. \* \* \*

Settlement with Lord Selkirk for the seizure of certain property and employees was later made, and the Hudson's Bay Company withdrew its operations to the boundary. The American Fur Company did not consider extending its posts to the boundary frontier until 1821, and these posts were not established until the following year. On September 1, 1821, Crooks-writes to Mr. William W. Matthews, of Montreal:

I should like to get a couple of good traders for the Rainy Lake department, and wish you would be on the lookout; should good people for that quarter be found, it must be known early, as we would order goods accordingly, and these people might in Montreal wait the arrival of the English goods.

On November 24, 1821, this company entered into a four-year contract with William Morrison for a salary of \$1,400 per annum to oversee their trade in the entire region of northern Minnesota. The contract, written by Crooks, is, in part, as follows:

\* \* \* And in addition that you will regulate and conduct the trade of all such posts or places as may be established by the American Fur Company in the country north of the Fond du Lac department, say in that region extending from the old Grand Portage on Lake Superior to the Lake of the Woods, or further if required within the limits of the United States. \* \* \*

About this time the British Government had taken measures to regulate the fur trade in their dominions, very similar to those already taken by Congress. On November 31, 1821, Crooks writes to Astor relative to this new legislation and to their own extension into the Northwest:

\* \* \* Since the British Government has legislated us out of Canada we shall next year occupy three posts within our lines from the vicinity of Rainy Lake to the Lake of the Woods. These are the remotest post we can have on the north, and although we shall come in contact with the Hudson Bay folks along the boundary, the best hunting grounds are on the American side. \* \* \*

Further, in regard to the supplies for the new territory, Crooks writes to Robert Stuart, the agent at Mackinac, on December 5, 1821:

Morrison will next year establish the Rainy Lake country and carry our trade as near as practicable to the boundary line. To do this effectually he is to get a Mr. McGillis, and he will make the necessary arrangements.

### And on April 8, 1822, Crooks again writes Stuart:

You are already aware that Morrison will establish some new posts along our northwestern border. The old Grand Portage is allowed to be within our line, and there the N. W. have always had a good little post, since they retired to Fort William. An outfit from the Fond du Lac department should be sent to that place under some active man; and in order to keep our opponents on their own side of the boundary, our clerks or traders are to be made customhouse officers, and as an additional security against the interfering with our Indians, the new station should be located as far from the boundary line as may be possible, having a due regard to the interest of the trade; and this will lessen the temptation which the rum of our adversaries would always be sure to create were our houses so near to theirs.

The liquor problem mentioned in the last letter proved to be a stumbling-block in the way of the whole undertaking of the American Fur Company in the Lake of the Woods region. The American traders were allowed to take no liquor whatever to the Indian country, while the Hudson's Bay Company with liquor were enabled to draw the Indians to the boundary and buy up their excess provisions, which resulted in literal starvation for the American posts along the boundary. In July, 1822, Stuart requests from George Boyd, the agent for Indian affaris at Mackinac, the right to import liquor into the Indian country for the particular use of the boundary trade in the Lake of the Woods territory.

During the early part of 1823 the American Fur Company and the Stone Bostwick Company combined, still keeping the old name. In writing to Mr. Stone relative to the state of their trade in the Northwest, Mr. Stuart brings up again the liquor question. He says:

But as at each post (say three in number) we come in immediate contact with the Hudson Bay Company we find it will be impossible to oppose them successfully without having some liquor—last year our people were almost starved out and had to carry provisions from the interior posts, at least 500 miles, on dog trains—& all this in consequence of the H. B. Co. purchasing with whiskey what provisions the Indians could spare; as there is no remedy at present for the evil (for the British Co. come over to the line & draw over the Indians), I am confident Gov. Cass will at once relieve us, by giving permission to carry in say 20 barrels whiskey; & you may give him any pledge he may require that a single drop of it shall not be used elsewhere; both Col. Boyd and Mr. Schoolcraft would I am satisfied see the propriety of this & be inclined to grant our request, but they might be averse to taking the responsibility. \* \* \*

The agent for Indian affairs, Maj. George Boyd, in July, 1824, granted a permit to Wm. A. Aitkin to take two barrels of liquor into the Indian country for use in the extreme northwestern frontier. The permit was never renewed.

Of the three posts of the American Fur Company, that at the mouth of Rainy Lake is the only one definitely located, although as elsewhere stated there seems to have been one at the mouth of Warroad River. The Indians have a tradition that on the Namakan River, which was at that time regarded as the boundary line, the American Fur Company maintained a small post on one side and the Hudson's Bay Company a post on the other.

When the matter of adjustment of affairs previous to consolidation with the Stone Bostwick Company in 1823 came up, it was conceded that the three northern posts, under conditions existing at that time, had little value. In fact the American traders began more and more to look to the south and west and to the Pacific region. In regard to the extensions in that direction, Crooks writes to Stuart on April 8, 1822:

\* \* \* For the south and west will eventually be our chief dependence and we had better prosecute that trade with vigor, before the door is closed against us by the enterprise and permanent arrangements now about to be matured by other adventurers.

The date of abandonment of these American posts in the Lake of the Woods region is not known with certainty. In the minutes of the council of the Hudson's Bay Company, held at the Red River settlement in June, 1833, the following appears:

That the sum of three hundred pounds stg. be paid by draft on the governor and committee to Wm. A. Aitkin, Esqre.; the American Fur Company having withdrawn during the past outfit from the frontier of the Lake Superior, Lac la Pluie, Winnipeg, and Red River districts, conformably to the terms of an engagement entered between Governor Simpson and Mr. Aitkin, as per correspondence dated Red River, 21st March, 1833, the said amount to be charged to the Lac la Pluie district, Ot., 1834.

The same entry is repeated in the annual minutes of the council up to the year 1842. In the minutes of 1839 the name of Ramsay Crooks replaces that of Wm. A. Aitkin; and the minutes of 1840 add the following to the usual vote of £300:

Information having been received through Mr. Keith from Ramsay Crooks, Esq., president of the American Fur Company, intimating the probability of Mr. W. A. Aitkin, establishing a trading post on the borders of Lac la Pluie district, near Vermilion Lake, with a view of carrying on a trade with the natives of that quarter, and Mr. Crooks, having requested permission to oppose Mr. Aitkin in order to restrain his encroachments upon the trade of Lac la Pluie district, it is resolved, that Mr. Crooks be requested to oppose him accordingly; that Chief Factor McDonnell be instructed to make the necessary arrangements for meeting the expected opposition with vigor; and that any additional supplies in men and goods required for that purpose be furnished him from Red River by C. F. Finlayson.<sup>38</sup>

Keating, in his Narrative,<sup>39</sup> mentions a post of the American Fur Company on the south side of Rainy River, at or near the site of the present town of International Falls. He learned from the agent that the American Fur Company carried on a trade between Rainy Lake and Fond du Lac, by way of the Grand Fork, Little Lake Winnipeek, the Mississippi, Sandy Lake, Savannah River, and the River St. Louis. Incidentally, it may be noted that in 1819 Lord Selkirk proposed to the American Fur Company that they should establish a trading post "north and east of Lake La Pluie and the Lake of the Woods."

Dr. Bigsby, who made a tour of the Lake of the Woods and Rainy River in 1823, as secretary to the Boundary Commission under Articles VI and VII of the treaty of Ghent, makes a passing reference to the establishment of the American Fur Company, which incidentally throws a certain light on the rivalries of the fur traders. He says:

Walking out the morning after our arrival (at Fort Frances) with Mr. W. McGillivray, the lieutenant governor, I saw on the opposite side of the river some buildings, and a tall, shabby-looking man angling near the falls. I asked my companion what all that meant. He replied, "The two or three houses you see form a fur-trading post of John Jacob Astor, the great merchant of New York. The man is one of his agents. He is fishing for a dinner. If he catch nothing, he will not dine. He and his party are contending with us for the Indian trade. We are starving them out, and have nearly succeeded."

Bigsby adds this dry comment:

The expedients for preventing a rival from entering a rich fur country are sometimes decisive. Every animal is advisedly exterminated and the district is ruined for years.<sup>40</sup>

The establishment of the Northwest Company on Rainy River was the scene of one of the minor conflicts between the company and Lord Selkirk, growing out of the rivalries between the Hudson's Bay Company and the Northwest Company, and the establishment of Selkirk's settlement on the Red River.

In 1816 Selkirk sent one of his agents named Fiddler with an armed party to seize Rainy Lake Fort. Dease, who was in charge of the post for the Northwest Company, managed to beat off the attack. Fiddler returned to Selkirk at Fort William, and the latter then sent d'Orsonnens, an officer of the disbanded Swiss regiment, a portion of which he had brought west with him from Montreal, with a strong force of men and two fieldpieces to capture the post, which they had no difficulty in doing. In the winter of the following year Lord Selkirk's band of De Meurons, in order to outflank the men of the Northwest Company, crossed over to the Red River from the Lake of the Woods, probably from some point on Buffalo Bay, and reached Pembina. They came down Red River, surprised the Nor'westers, and captured their post, Fort Douglas.

It does not appear that the Northwest Company established any trading posts on the Lake of the Woods. The first posts built on the lake subsequent to the establishment of Fort St. Charles were those of the Hudson's Bay Company at Rat Portage, known at one time as Rat Portage House, and of the American Fur Company at the mouth of Warroad River. When Rat Portage House was first established it is impossible to say with our present information. There may have been a temporary post there as early as 1823, but if so it is curious that neither Mr. Keating nor Dr. Bigsby makes any reference to it. Paul Kane, however, mentions it in 1845 and in 1846.

"We next made the Rat Portage," he says, "at the foot of which is the fort, a small establishment where they were so badly supplied with provisions as to be able to afford us only two whitefish."

<sup>&</sup>lt;sup>38</sup> Oliver, The Canadian Northwest, pp. 716, 732, 765, 781, 805, 822, 858.

<sup>&</sup>lt;sup>39</sup> Keating, Narrative of an Expedition to the Source of St. Peters River.

<sup>&</sup>lt;sup>40</sup> The Shoe and Canoe, Vol. II, p. 273.

On his return journey he says, "Arrived at Rat Portage where we were received by Mr. McKenzie with the greatest hospitality and kindness." <sup>41</sup>

Captain Palliser says in 1857:

On the left bank of the river, opposite to where the portage path terminates, there is a small temporary trading post of the Hudson's Bay Company.<sup>42</sup>

Henry Youle Hind, writing the same year, describes the fort as, \* \* \* "beautifully situated on an island at one outlet of the Lake of the Woods. It is surrounded with hills about 200 feet high, and near it some tall white and red pine, the remains of an ancient forest, are standing amidst a vigorous second growth."<sup>43</sup>

Dr. Robert Bell, for many years an officer of the Geological Survey of Canada, writes: 44

I was at Rat Portage in 1872. The H. B. Co.'s post was all that there was of it then. It consisted of two one-story log shanties, a sales shop, and a dwelling. They stood on the west side of what afterwards became the first and main street of Rat Portage. The shanties were at the same spot till 1882, when they were burned, and the company moved across the street and a little farther south. By 1881 they had been replaced by clapboarded buildings, or the log ones had been clapboarded and built higher. \* \* \* My visit in 1872 was made when I came up the Winnipeg River and passed into the Northwest Angle. The place was then a little outpost of the company with a small stock of goods for the Indian trade. The only clearing was the little place between the canoe-landing and the shanties. All around was unbroken forest. In 1826 there might have been a post at the western outlet, but I have never heard so.

Alexander Matheson, at one time a factor in the service of the Hudson's Bay Company, says:

The old post was situated on an island a short distance below the falls at the eastern outlet of Lake of the Woods, and relics in the shape of parts of clay chimneys, etc., were to be seen there a few years ago. The Portage du Rat proper is west of the Western Outlet, at the place where Dick Banning & Company's sawmill is. The site of the old post is now known as Millers Island, and is nearly opposite the Rat Portage electric works.

This identification of the old post is confirmed by R. J. K. Pither, for some years an employee of the Hudson's Bay Company, later an agent of the Indian Department of Canada, and now living in his extreme old age at Kenora.

Mr. Archibald Blue, from whose valuable narrative of his Tour of Inspection Through Northwestern Ontario (Ontario Bureau of Mines Report, 1895), the above is taken, has this to say in regard to the three outlets of the Lake of the Woods:

There are three outlets from the lake which unite below to form the Winnipeg River—one near the west side, a small stream, now called Keewatin Channel, where Keewatin village stands; one near the east side of the lake, close to the modern town of Rat Portage, called the east branch of the river, on which is the beautiful Hebes Falls; and the third and largest in the middle, called the west branch, on which is the Witch's Cauldron, and the great dam recently completed by the Keewatin Power Company. The village of Norman, built on the island between the middle and western outlets, is now part of Rat Portage town, having been incorporated with it in 1892, but Keewatin has maintained an independent existence. On the old maps Portage du Rat is shown to be near the western channel. Upon the left bank of the middle channel there is to be seen an old trail, now grown up with bushes; but the portage at present in use by the Indians is on the right bank of the eastern channel.

Very little is known of the establishment of the American Fur Company at the mouth of Warroad River. Henry R. Schoolcraft, who was Indian agent for the United States Government at Sault Ste. Marie for several years, has the following in a report on trading posts in his agency, dated August 9, 1824:

Pursuant to instructions, I have determined on the following places where trade may be carried on with the different bands of Indians within the limits of this agency \* \* \* 18. At Rainy Lake. 19. At War Road \* \* \*

It appears from the schedule to the deed of surrender from the Hudson's Bay Company to the Crown in 1869, when Canada assumed jurisdiction over what was known as Ruperts Land, that the company at that time had the following trading posts in the Lake La Pluie

#### APPENDIX I

district, extending from the mouth of Winnipeg River to Rainy Lake: Fort Alexander, English River, Eagles Nest, Lac du Bonnet, Rat Portage, Whitefish Lake, Trout Lake, Lake of the Woods, Shoal Lake, Big Island, Clearwater Lake, Sandy Point, Hungry Hall, and Fort Frances.

This sketch brings us down approximately to the time when the need for a welldefined boundary line between the possessions of Great Britain and the United States in this region became apparent to both Governments. In the attempt to secure such a boundary, negotiations were carried on between representatives of the two Governments early in the nineteenth century and a treaty, in which this part of the boundary was defined, was concluded in 1842. These official proceedings, which are discussed in Appendix II of this report, and negotiations pertaining to other parts of the boundary, resulted eventually in the conclusion of the treaty of 1908, which provided for the more complete definition and demarcation of the international boundary from the Atlantic to the Pacific Ocean.

## APPENDIX II

# NEGOTIATIONS AND TREATIES PERTAINING TO THE BOUNDARY PREVIOUS TO THE TREATY OF 1908<sup>1</sup>

The negotiators of the first of the several boundary treaties, the provisional articles of peace of 1782, in deciding upon the general course of the international boundary westward from the Great Lakes, very probably desired that the line should follow the most suitable topographic feature extending farthest westward from Lake Superior toward the supposed locality of the upper reaches of the Mississippi River, which stream at that time was to be the western boundary of the United States. For their geographic knowledge of the region, they depended principally upon the information shown on the Mitchell map of the British and French Dominions of North America of 1755. As will be seen by consulting a reproduction of the northwestern portion of this map (p. 208), a large river is shown flowing from Lake of the Woods to Lake Superior. Also, a note on Mitchell's map states that the source of the Mississippi River was supposedly near the fiftieth degree of north latitude. The logical course for the boundary seemed therefore to be along this stream to Lake of the Woods and thence westward to the Mississippi River.

Later explorations however, proved that this part of Mitchell's map was quite inaccurate. The continuous stream shown between Lake of the Woods and Lake Superior was, in fact, a system of disconnected rivers and lakes; a height of land intervened, from the crest of which part of the waters were found to drain westward into Lake of the Woods and the others eastward into Lake Superior. Furthermore, the headwaters of the Mississippi River were found not to extend as far north as latitude 50°<sup>2</sup> and, of course, could not be intersected by a line running west from Lake of the Woods<sup>3</sup> as presupposed by the treaty makers.

The first description of this part of the international boundary appears in the provisional articles of peace, concluded November 30, 1782, between the United States and Great Britain. It was repeated word for word in Article II of the definitive treaty of peace of 1783, the text of which is as follows:

### DEFINITIVE TREATY OF PEACE

(Concluded at Paris September 3, 1783; ratified by the Congress of the United States January 14, 1784; ratified by Great Britain April 9, 1784)

#### ARTICLE II

\*

And that all disputes which might arise in future, on the subject of the boundaries of the said United States may be prevented, it is hereby agreed and declared, that the following are, and shall be their boundaries, viz: From the northwest angle of Nova Scotia, viz. that angle

<sup>1</sup> The text of the treaties has been taken from Treaties, Conventions, International Acts, Protocols, and Agreements between the United States of America and other Powers, Vol. I, by W. M. Malloy. This differs from other published texts only in unimportant details of punctuation, capitalization, division into paragraphs, and order of precedence.

<sup>2</sup> Tyrrell, J. B., Thompson's Narrative of His Explorations, p. 269; also Appendix I, p. 197, of this report.

<sup>3</sup> Convention of London (1818); Malloy, W. M., Treaties, Conventions, International Acts Protocols, and Agreements, Vol. I, p. 632; Webster-Ashburton Treaty, p. 211, of this report.

which is formed by a line drawn due north from the source of Saint Croix River to the Highlands; along the said Highlands which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the northwesternmost head of Connecticut River; thence down along the middle of that river, to the forty-fifth degree of north latitude; from thence, by a line due west on said latitude, until it strikes the river Iroquois or Cataraquy; thence along the middle of said river into Lake Ontario, through the middle of said lake until it strikes the communication by water between that lake and Lake Erie; thence along the middle of said communication into Lake Erie, through the middle of said lake until it arrives at the water communication between that lake and Lake Huron; thence along the middle of said water communication into the Lake Huron; thence through the middle of said lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward of the Isles Royal and Phelipeaux, to the Long Lake; thence through the middle of said Long Lake, and the water communication between it and the Lake of the Woods, to the said Lake of the Woods; thence through the said lake to the most northwestern point thereof, and from thence on a due west course to the river Mississippi; thence by a line to be drawn along the middle of the said river Mississippi until it shall intersect the northernmost part of the thirty-first degree of north latitude. South, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of thirty-one degrees north of the Equator, to the middle of the river Apalachicola or Catahouche; thence along the middle thereof to its junction with the Flint River; thence strait to the head of St. Mary's River; and thence down along the middle of St. Mary's River to the Atlantic Ocean. East, by a line to be drawn along the middle of the river St. Croix, from its mouth in the Bay of Fundy to its source, and from its source directly north to the aforesaid Highlands, which divide the rivers that fall into the Atlantic Ocean from those which fall into the river St. Lawrence; comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean; excepting such islands as now are, or heretofore have been, within the limits of the said province of Nova Scotia.

The "Long Lake" mentioned above in Article II of the treaty of 1783 had not been identified up to the time of the negotiation of the treaty of 1814 (treaty of Ghent), and without an agreement upon the location of this part of the boundary even an approximate determination of the line in this region was impossible. It was apparent that this question as well as the determination of the most northwestern point of Lake of the Woods would require surveys to be made. Accordingly, the negotiators of the treaty of Ghent made provision in that treaty for the determination of this portion of the international boundary together with other portions. Articles VII and VIII of the treaty of Ghent refer to this part of the boundary and are as follows:

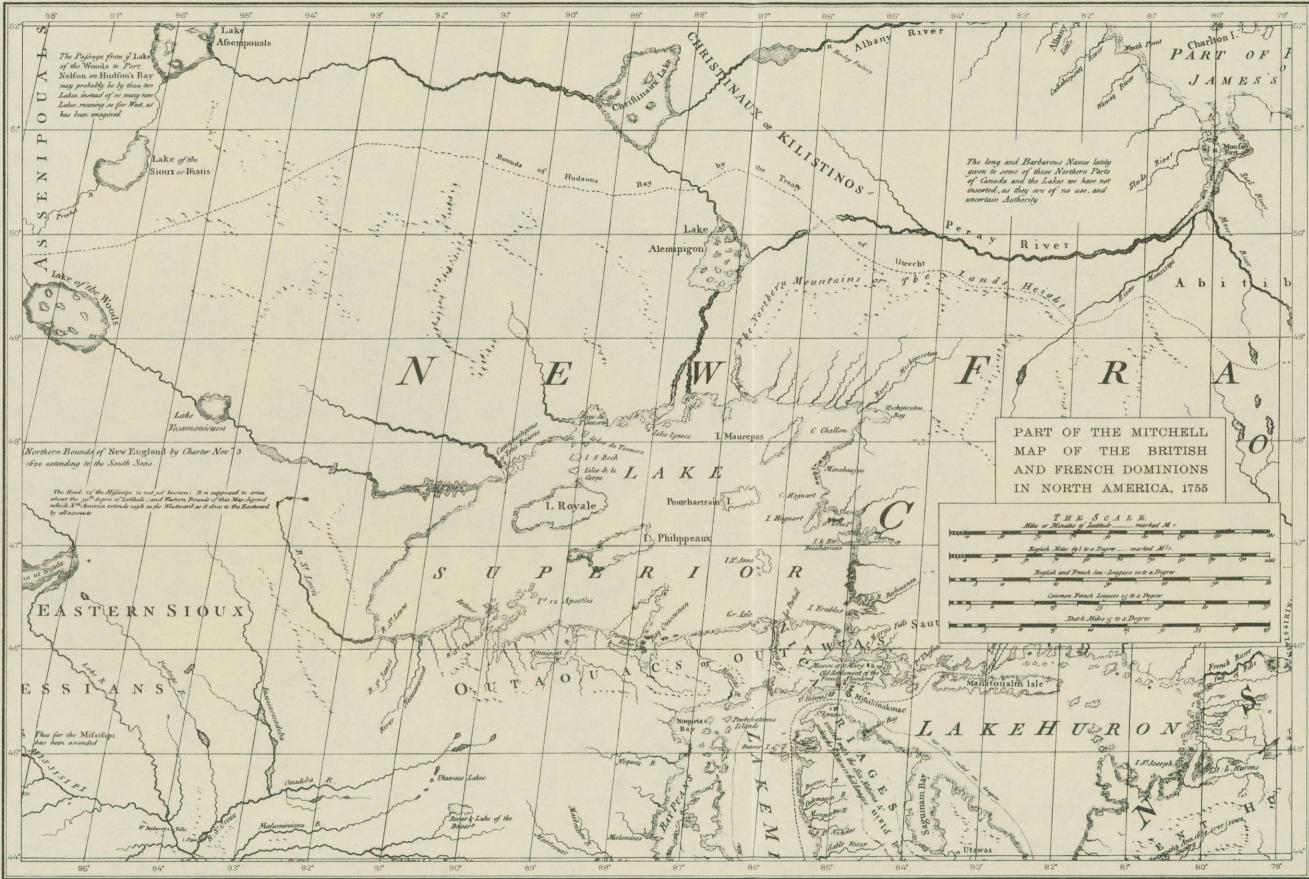

## TREATY OF PEACE AND AMITY (TREATY OF GHENT)

### (Concluded at Ghent December 24, 1814; ratifications exchanged February 17, 1815) \*

\*

### ARTICLE VII

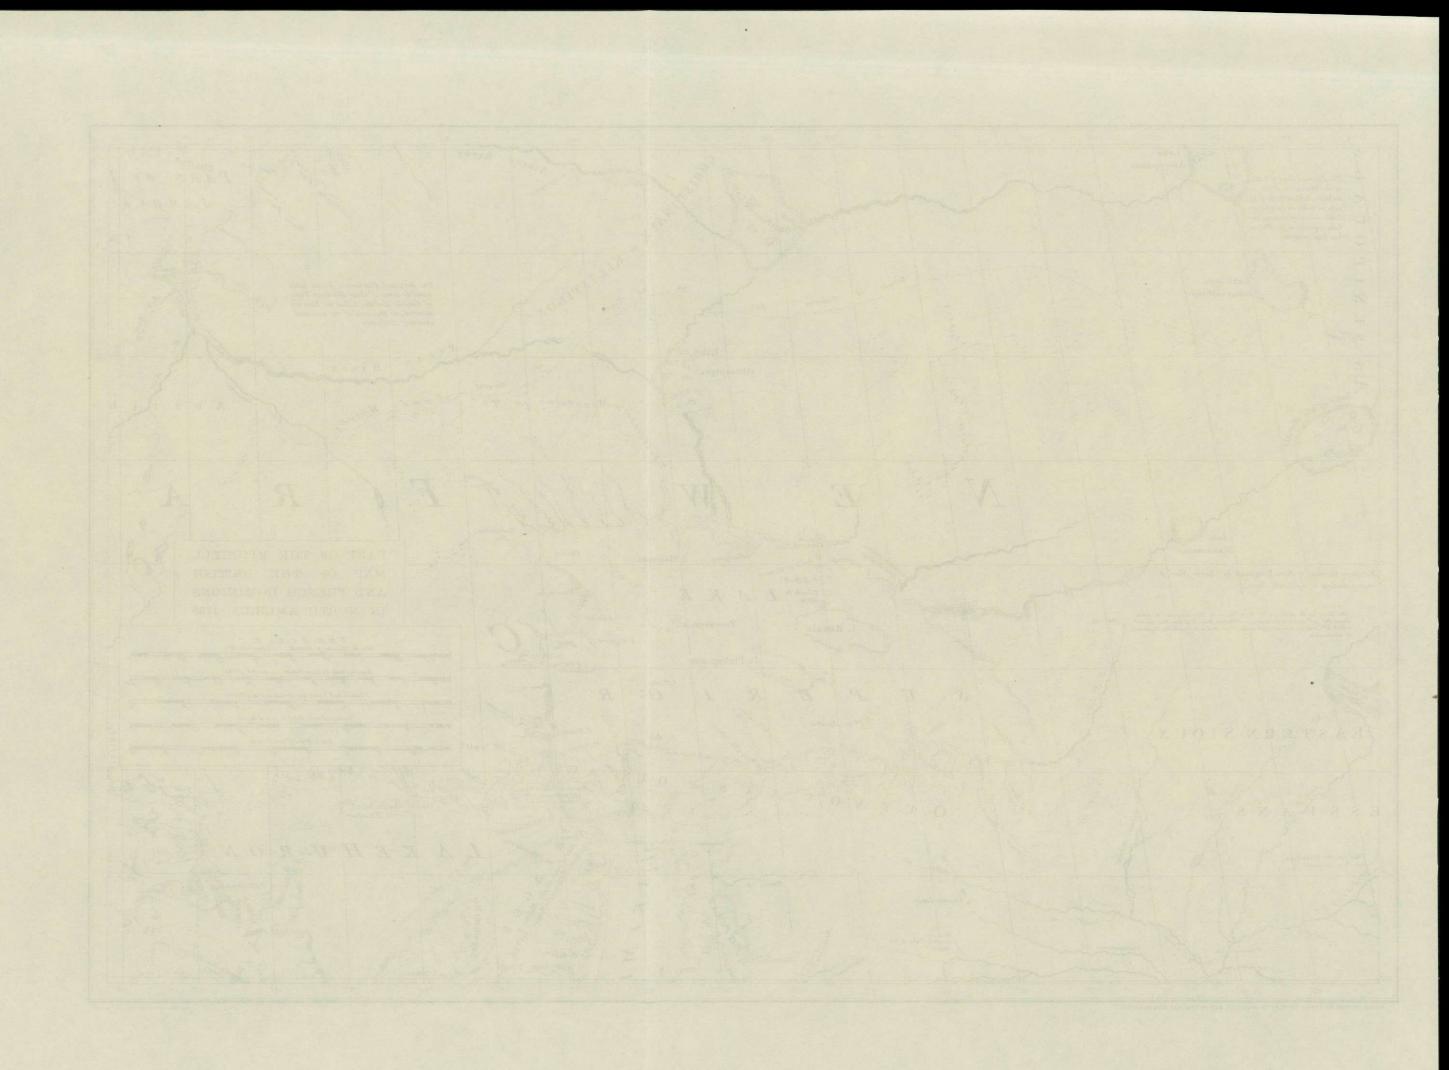

It is further agreed that the said two last-mentioned Commissioners, after they shall have executed the duties assigned to them in the preceding article, shall be, and they are hereby, authorized upon their oaths impartially to fix and determine, according to the true intent of the said treaty of peace of one thousand seven hundred and eighty-three, that part of the boundary between the dominions of the two Powers which extends from the water communication between Lake Huron and Lake Superior, to the most northwestern point of the Lake of the Woods, to decide to which of the two parties the several islands lying in the lakes, water communications and rivers, forming the said boundary, do respectively belong, in conformity with the true intent of the said treaty of peace of one thousand seven hundred and eighty-three; and to cause such parts of the said boundary as require it to be surveyed and marked. The said Commissioners shall, by a report or declaration under their hands and seals, designate the boundary aforesaid, state their decision on the points thus referred to them, and particularize the latitude and longitude of the most northwestern point of the Lake of the Woods, and of

.

PRINTED BYTHE U.S. BEOLDOIGAL SURVEY

such other parts of the said boundary as they may deem proper. And both parties agree to consider such designation and decision as final and conclusive. And in the event of the said two Commissioners differing, or both or either of them refusing, declining or wilfully omitting to act, such reports, declarations or statements shall be made by them, or either of them, and such reference to a friendly sovereign or State shall be made in all respects as in the latter part of the fourth article is contained, and in as full a manner as if the same was herein repeated.

#### ARTICLE VIII

The several boards of two Commissioners mentioned in the four preceding articles shall respectively have power to appoint a Secretary, and to employ such surveyors or other persons as they shall judge necessary. Duplicates of all their respective reports, declarations, statements and decisions and of their accounts, and of the journal of their proceedings, shall be delivered by them to the agents of His Britannic Majesty and to the agents of the United States, who may be respectively appointed and authorized to manage the business on behalf of their respective Governments. The said Commissioners shall be respectively paid in such manner as shall be agreed between the two contracting parties, such agreement being to be settled at the time of the exchange of the ratifications of this treaty. And all other expenses attending the said Commissions shall be defrayed equally by the two parties. And in the case of death, sickness, resignation or necessary absence, the place of every such Commissioner, respectively, shall be supplied in the same manner as such Commissioner was first appointed, and the new Commissioner shall take the same oath or affirmation, and do the same duties. It is further agreed between the two contracting parties, should, by the decision of any of the Boards of Commissioners aforesaid, or of the sovereign or State so referred to, as in the four next preceding articles contained, fall within the dominions of the other party, all grants of land made previous to the commencement of the war, by the party having had such possession, shall be as valid as if such island or islands had, by such decision or decisions, been adjudged to be within the dominions of the party having had such possession.

The commissioners who were appointed to carry out the provisions of Article VII of the treaty of Ghent, Peter B. Porter for the United States and Anthony Barclay for His Britannic Majesty, had also been designated under Article VI of the same treaty to fix the boundary through the St. Lawrence River and the Great Lakes as far as the eastern end of Lake Superior. Upon the termination of their duties under Article VI, they therefore issued instructions to their surveyors to take up the work west of Lake Superior.

The surveyors were instructed to ascertain the position of the body of water referred to in the treaty as "Long Lake."<sup>4</sup> If this waterway did not discharge into Lake Superior, they were instructed to make surveys of the chain of waters that most nearly approximated the line intended by the treaty. Their first surveys, which covered Pigeon River and the other waterways traversed by the present boundary line, were completed in time for the results to be reported to the commissioners at a meeting held at Montreal in October, 1824.

In the discussion of the claims of the two Governments at this meeting, the commissioners were apparently close to an agreement upon Pigeon Bay at the mouth of Pigeon River as the Long Lake of the treaty of 1783.<sup>5</sup> But failing to reach an agreement, they modified their claims and issued instructions for further surveys. The British commissioner ordered that the St. Louis River and adjacent waterways leading to Sand Point Lake be surveyed, while the United States commissioner issued similar orders regarding Kaministikwia River, Dog Lake, Dog River, and the waterways leading to Lac LaCroix. The arguments in favor of these routes are

<sup>&</sup>lt;sup>4</sup> White, James, Boundary Disputes and Treaties, p. 831; Moore, J. B., International Arbitrations, p. 172. <sup>5</sup> Moore, J. B., International Arbitrations, pp. 172 and 182.

discussed in detail in James White's Boundary Disputes and Treaties, pages 832–835, and also in J. B. Moore's History and Digest of International Arbitrations, Volume I, pages 180–186.

The commissioners failed to reach an agreement upon either the St. Louis River or the Kaministikwia route. A compromise route was next proposed by each commissioner but these were rejected also.

The lines which were first claimed by the commissioners and the compromise lines which they later proposed are shown on the map opposite this page. The British compromise line as described in the journal of the commissioners stated that "the boundary should be conducted from water to water, overland, through the middle of the old and accustomed portages, in those places where from falls, rapids, shallows, or any other obstruction, the navigation and access into the interior by water, are rendered impracticable."

A subsequent modification of the British compromise line was offered, namely, to follow Pigeon River from its mouth to Rainy Lake by a water line, where possible, but this offer was accompanied by the stipulation that the Grand Portage route should be made free and common to the use of both parties.<sup>6</sup> The United States commissioner rejected this proposal for the reason that he had no authority to agree to such a stipulation.

In order that there might be no misunderstanding regarding their actions, the commissioners, at a meeting held October 23, 1826, entered in their journal<sup>7</sup> their points of agreement and disagreement, together with a description of the part of the line that was acceptable to both commissioners, a description of the St. Louis River and Kaministikwia River routes, and of the compromise lines.

The commissioners held their final meeting December 24, 1827, and submitted separate reports.<sup>8</sup> The part of the boundary upon which they were agreed and which was later accepted by Webster and Ashburton during the negotiation of the treaty of 1842, was described in their journal as follows: <sup>9</sup>

Beginning at a point in Lac La Pluie, close north of island marked No. 1, lying below the Chaudiere falls of lake Namecan; thence, down this channel, between the islets marked No. 2 and No. 3; thence, down the middle of said channel, into Lac La Pluie, westward of island No. 4; thence, through the said lake, close to the south point of island No. 5; thence, through the middle of said lake, north of island No. 6, and south of island No. 7; thence through the middle of said lake, to the north of islet No. 8, and south of islands No. 9, No. 10, No. 11, and between islands No. 12 and No. 13; thence, south of islands No. 14 and No. 15; thence, through the middle of said lake, north of a group of islands, No. 16; thence, south of a group of rocks, No. 17; thence, south of a group of island No. 20, and all its contiguous islets; thence, south of island No. 21, and midway between islands No. 22 and No. 23; thence, south of island No. 24; thence north of island No. 25; thence through the middle of said lake, to its *sortie*, which is the head of the Riviere La Pluie; thence, down the middle of said river, to the Chaudiere falls, and having a portage on each side; thence, down the middle of said falls and river, passing close south of island No. 27, No. 28, No. 29, and No. 30; thence, down the middle of said river, passing north of islands No. 32; thence, down the middle of said river, passing west of the Manitou rapid, and passing south of No. 33; thence, down the middle of said river, and the Long Sault rapid, north of island No. 34, and south of islets No. 35, No. 36, and No. 37; thence,

in it is to

down the middle of said river, passing south of island No. 38; thence, down the middle of said river, to its entrance between the main land and Great Sand Island, into the Lake of the Woods; thence, by a direct line to a point in said lake, one hundred yards east of the most eastern point of island No. 1; thence, northwestward, passing south of islands No. 2 and No. 3; thence, northeastward <sup>10</sup> of island No. 4, and southwestward of islands No. 5 and No. 6; thence, northward of island No. 7, and southward of islands No. 8, No. 9, No. 10, and No. 11; thence, through the middle of the waters of this bay, to the northwest extremity of the same, being the most northwestern point of the Lake of the Woods. And from a monument erected in this bay, on the nearest firm ground to the above northwest extremity of said bay, the courses and distances are as follows, viz: 1st. N., 56° W., 1,565½ feet<sup>11</sup>; 2d. N., 6° W., 861½ feet; 3d. N., 28° W., 615.4 feet; 4th. N., 27° 10′ W., 495.4 feet; 5th. N., 5° 10′ E., 1,322½ feet; 6th. N., 7° 45′ W., 493 feet; the variation being 12° east. The termination of this 6th or last course and distance, being the above said most northwestern point of the Lake of the Woods, as designated by the 7th article of the treaty of Ghent; and being in the latitude forty-nine degrees twentythree minutes and fifty-five seconds north of the equator; and in longitude, ninety-five degrees fourteen minutes and thirty-eight seconds west from the observatory at Greenwich.

After the submission of the separate reports of commissioners Barclay and Porter, no discussion regarding this part of the boundary seems to have taken place for a period of 10 years.<sup>12</sup> The negotiations for the settlement of the Maine-Quebec boundary offered the opportunity of disposing of this question also, and Webster and Ashburton came to an agreement upon the boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior, which they then laid down on the maps prepared for that purpose in 1822–1824. They described its course in Article II of the treaty of 1842, the text of which is as follows:

#### WEBSTER-ASHBURTON TREATY

#### (Concluded August 9, 1842; ratifications exchanged October 13, 1842)

## \* \* \* \* \*

### ARTICLE II

It is moreover agreed, that from the place where the joint Commissioners terminated their labors under the sixth article of the treaty of Ghent, to wit, at a point in the Neebish Channel, near Muddy Lake, the line shall run into and along the ship-channel between Saint Joseph and St. Tammany Islands, to the division of the channel at or near the head of St. Joseph's Island; thence, turning eastwardly and northwardly around the lower end of St. George's or Sugar Island, and following the middle of the channel which divides St. George's from St. Joseph's Island; thence up the east Neebish Channel, nearest to St. George's Island, through the middle of Lake George; thence, west of Jonas' Island, into St. Mary's River, to a point in the middle of that river, about one mile above St. George's or Sugar Island, so as to appropriate and assign the said island to the United States; thence, adopting the line traced on the maps by the Commissioners, thro' the river St. Mary and Lake Superior, to a point north of Ile Royale, in said lake, one hundred yards to the north and east of Ile Chapeau, which last-mentioned island lies near the northeastern point of Ile Royale, where the line marked by the Commissioners terminates; and from the last-mentioned point, southwesterly, through the middle of the sound between Ile Royale and the northwestern main land, to the mouth of Pigeon River, and up the said river, to and through the north and south Fowl Lakes, to the lakes of the height of land between Lake Superior and the Lake of the Woods; thence, along the water communication to Lake Saisaginaga, and through that lake; thence, to and through Cypress Lake, Lac du Bois Blanc, Lac la Croix, Little Vermillion Lake, and Lake Namecan and through the several smaller lakes, straits, or streams, connecting the lakes here mentioned, to that point in Lac la Pluie. or Rainy Lake, at the Chaudière Falls, from which the Commissioners traced the line to the most north-

<sup>10</sup> Text has been corrected to read "northeastward" instead of "northwestward" to agree with maps of the boundary under the treaty of 1842.

<sup>11</sup> Text has been corrected to read "1,565½ feet" instead of "156.5½" to agree with distance given in British and Foreign State Papers, Vol. LVII, and also in report of Dr. J. L. Tiarks, astronomer for the British Government, as published in American Journal of Science and Arts, Vol. XV, p. 52.

<sup>12</sup> Moore, J. B., International Arbitrations, p. 191.

t t

western point of the Lake of the Woods; thence, along the said line, to the said most northwestern point, being in latitude 49° 23' 55'' north, and in longitude 95° 14' 38'' west from the observatory at Greenwich; thence, according to existing treaties, due south to its intersection with the 49th parallel of north latitude, and along that parallel to the Rocky Mountains. It being understood that all the water communications and all the usual portages along the line from Lake Superior to the Lake of the Woods, and also Grand Portage, from the shore of Lake Superior to the Pigeon River, as now actually used, shall be free and open to the use of the citizens and subjects of both countries.

After the surveys had been made under Article VII of the treaty of 1814 (treaty of Ghent), this part of the line was not resurveyed, mapped, or monumented by joint action of the two Governments up to the time of the negotiation of the treaty of 1908. During this period questions arose regarding the nationality of islands in Lake of the Woods and Lac LaCroix, and the necessity for resurveying and monumenting this part of the boundary was recognized in correspondence between the two Governments. In 1896, a field inspection of the chief astronomer of the Dominion of Canada and the data thus obtained were later used in framing Article V of the treaty of 1908 under the provisions of which the boundary line from the Northwesternmost Point of Lake of the Woods to Lake Superior has been reestablished.

## APPENDIX III

# ORIGINAL SURVEY OF THE BOUNDARY FROM THE NORTHWEST-ERNMOST POINT OF LAKE OF THE WOODS TO LAKE SUPERIOR

The several waterways which constitute this part of the international boundary, as will be seen from a perusal of the historical sketch in Appendix I of this report, were followed by explorers and fur traders during their journeys from the Great Lakes to the fur country of the northwest in the period preceding the cession of Canada to Great Britain. Nevertheless, so little was generally known at that time regarding the geography of this part of North America that on the Mitchell map of 1755<sup>1</sup> these waterways were incorrectly represented as one large river flowing from Lake of the Woods to Lake Superior.

After the cession of Canada to Great Britain, English traders began to make their way westward over this route and it became well known, having been traversed by Alexander Henry, Alexander Mackenzie, David Thompson, and others. Thompson probably took astronomical observations along it, as was his custom on all his travels, but it is very doubtful if any systematic survey was made of the route previous to the treaty of Ghent, Article VII of which provided for the determination of the boundary "from the water communication between Lake Huron and Lake Superior to the most northwestern point of Lake of the Woods."

The following account of the surveys under the treaty of Ghent has been drawn almost entirely from the unpublished journals of David Thompson,<sup>2</sup> who was surveyor and astronomer for Great Britain. This account, therefore, necessarily deals largely with Thompson's work. As far as is known, the only records of the field work of the United States surveyors are the maps that they made of part of the region along the boundary. The Canadian and United States parties made their surveys quite independently of each other.

At a conference of the boundary commissioners under Articles VI and VII of the treaty of Ghent (Peter B. Porter for the United States and Anthony Barclay for His Britannic Majesty), held in February, 1822, the commissioners apparently issued informal instructions to their field parties for the surveys necessary for the carrying out of the provisions of Article VII.

Thompson, surveyor for the British commission, lived at that time in Williamstown, a small village in eastern Ontario near the St. Lawrence River, about 50 miles west of Montreal. On his return from the conference above referred to, he at once began preparations for the coming season's operations. Realizing the necessity for a light boat for use on the surveys, he had work begun on the construction of one of a suitable type. It was necessary for him to oversee everything personally, the cutting of the cedar logs, the sawing of the lumber, and the actual designing and building of the boat.

<sup>&</sup>lt;sup>1</sup> Appendix II, p. 208.

<sup>&</sup>lt;sup>2</sup> The Thompson journals are filed in the archives of the Crown Lands Department of Ontario.

#### APPENDIX III

After many delays the boat was finally completed and he set out on May 24 for Sault Ste. Marie. His route was up the St. Lawrence River, through the Bay of Quinte, and along the north shore of Lake Ontario to Toronto, then known as York. From York the boat, men, and supplies were hauled north to Holland Landing, a distance of 32 miles. The boat was again launched on the Holland River at this point, and the voyage was resumed, proceeding down this river and through Lake Simcoe to the site of the present town of Barrie. From this point the boat and supplies were hauled by oxen overland several miles to the Nottawasaga River, down which the voyage was continued to Georgian Bay, and thence along the eastern and northern shores of that bay and along the north shore of Lake Huron to Sault Ste. Marie. Thompson arrived at Sault Ste. Marie on June 23 and found that the United States surveyor, Mr. James Ferguson, was already at work in that vicinity.

In the meantime, at a meeting in June, 1822, at Utica, N. Y., the commissioners had given formal instructions that the surveyors, after passing Lake Superior, were to ascertain the position of the Long Lake of the treaty of 1783, or, if no lake of that name was to be found, they were to locate the chain of waters referred to in the treaty by that designation. If they should find, as it was said they probably would, that those waters did not communicate with Lake Superior, they were to ascertain what rivers or bodies of water, divided by a height of land, and emptying, one into Lake Superior and the other into Lake of the Woods, approximated most nearly to the line intended by the treaty.

It is perhaps fitting that a little space be given to a description of the conditions under which these early surveys were made.

The surveyors traveled almost entirely by boats or canoes, the property of the commission. Even the journey from Montreal to York was made by water as a rule. Transportation on the Great Lakes by vessels was, in general, too slow to be relied upon: a shipment made from Sault Ste. Marie October 1, 1825, did not reach Montreal until July 27, 1826. On account of the long distances to be covered from the base of supplies to the region to be surveyed, the slow rate of travel, and the many delays due to bad weather and high winds, it was necessary to travel virtually from daylight till dark. An average working day for the canoe men was from 5 a. m. to 7.30 p. m. The usual practice was to start off soon after daylight, paddle or row for several hours, go ashore and breakfast, continue the journey until early afternoon, go ashore again for dinner, and then continue on until sundown, when camp was made and supper was eaten. The crew did not include a cook, and each man was apparently responsible for his own rations, which were weighed out and issued to him once or twice a week. The remainder of the food was kept when possible under lock and key. The daily ration consisted of a pound of salt pork or beef, a pound of biscuit, and half a pint of corn. Thompson evidently considered this a very liberal ration, for he complains that his men threatened to quit the service on one occasion, if they were given only the usual grease and corn; that they demanded pork; and that he was forced to pay \$16 for a barrel of pork at Sault Ste. Marie. On another occasion he notes in his diary, apparently with some bitterness, that his men stole from him a few pounds of biscuits and a piece of salt beef. These

rations were supplemented to some extent by fish and game, but Thompson's diary indicates that for some reason, probably lack of time, only very small quantities of these were obtained. The Indians encountered between Pigeon River and Lake of the Woods were frequently near starvation, and the death of one from that cause is recorded. When passing or working near settlements or Indian encampments, fresh meat was purchased when available. Dried peas were sometimes substituted for the corn, and flour for the biscuit, and occasionally the men were allowed a little sugar and whiskey. The wages of laborers were small, \$17 to \$20 per month with board, but an assistant surveyor hired by Thompson after the completion of the field work of the boundary surveys was paid £24 7/ 6d per month. Thompson seems to have been as familiar with dollar currency as with sterling, both apparently being in general use in Canada at that time.

As noted above, the surveyors, acting under orders previously given, were already in the field at the time of the commissioners' meeting and had reached Sault Ste. Marie. When Thompson visited the United States party then working in that vicinity, he was informed by its chief, Mr. Ferguson, that the United States surveyors had been instructed to continue their field work through the coming winter and to explore the rivers flowing into Lake Superior, but only those north of Isle Royal. Thompson, who had no such instructions, continued his voyage around the south shore of Lake Superior and after exploring the west end of the lake arrived at Pigeon Bay. He examined Pigeon River for a short distance and then proceeded to Fort William, having run out of provisions. After securing provisions he returned to the Grand Portage, a few miles southwest of Pigeon Bay, where he found the dwellings and storehouses, formerly used by the fur traders, in ruins. After crossing the portage, he explored the chain of lakes forming the present boundary as far as Saganaga Lake. The lateness of the season, August 17, did not permit his going farther, but he instructed his interpreter and guide, an Englishman named Sayer, whom he had hired at Fort William, to make explorations in the Vermilion Lake district. On reaching Arrow Lake on his return, he passed Mr. Ferguson, the United States surveyor, and his party going in. They were planning to follow the same route as Thompson had taken. Thompson continued on his way out and after a hazardous voyage via Fort William, Sault Ste. Marie, Georgian Bay, and Lake Simcoe reached York, whence he proceeded to his home by wagon and boat, arriving on November 14.

What explorations and surveys were made by the United States surveyors during the winter is unknown.

Apparently the commissioners held no conference during the winter of 1822–23 at which Thompson was present, but he had much correspondence with them.

Thompson left home again on May 8, 1823, and proceeded to Lake Superior, via York, Lake Simcoe, and Georgian Bay. He reached the Grand Portage on June 28 and started a rapid survey of the route to Lake of the Woods. The party consisted of Thompson, his son Samuel, who acted as his assistant, Doctor Bigsby (the secretary to the commission), Doctor Bigsby's servant, and eight men. On this occasion Thompson does not seem to have gone through Arrow Lake.

At Gunflint Lake he was joined by his interpreter, Sayer, who was accompanied by his family. The party then proceeded westward along the route of the present

#### APPENDIX III

boundary, reaching Lake of the Woods on July 16. They next made a preliminary survey of this lake, working westward along the south shore and thence northward and eastward. Thompson took observations for latitude and longitude as often as the weather permitted, and by July 29 the party again arrived at the mouth of Rainy River, having passed completely around Lake of the Woods. During this time Thompson visited Rat Portage, the present town of Kenora, where he took observations and left a letter for Mr. Ferguson. Apparently he did not enter Northwest Angle Inlet.

The party spent the first 12 days of August surveying Rainy Lake. While so engaged, they met the United States party in charge of Messrs. Ferguson, Whistler, and Delafield.

Thompson's party continued their rapid surveys until August 14, at which time they had reached Bottle Portage. By this time, only sufficient provisions for two days' full rations were left, so they now made all haste to Fort William, where they arrived on August 23, all weak from lack of food.

At Fort William, Thompson again met Messrs. Ferguson and Delafield and proposed to them that during the coming winter joint maps combining the results of both their surveys should be made. Mr. Ferguson declined this offer, and stated that he had surveyed separately and would prefer to keep his maps so. Major Delafield doubted whether the expense of conferences of the surveyors would be warranted.

The next day the United States party set off to survey the islands southwest of Fort William, and on the following day Thompson left for Sault Ste. Marie, arriving on September 14. The United States survey party arrived the next day.

Thompson spent the next two weeks making triangulation surveys among the islands of the St. Marys River and then left for home, reaching York on October 30, and arriving at his home on November 9. He spent the winter in preparing maps from the observations, surveys, and sketches made during the preceding summer.

In February, 1824, a conference of the commissioners was held at Albany, N. Y., at which the surveyors presented their maps which covered part of the present boundary waterways. They were instructed to complete their surveys of the route from the mouth of Pigeon River to the Northwesternmost Point of Lake of the Woods and to determine the Northwesternmost Point in accordance with Thompson's suggestions as to how that was to be done.

The United States party left Montreal about May 1 the following season, the British party a week later. Both parties followed the route of the Ottawa River, the Mattawa River, Lake Nipissing, French River, and Lake Huron to Sault Ste. Marie, a journey which required a month by canoe. By June 15 both parties were at Fort William ready for work.

The maps prepared by the United States surveyor cover the boundary waterways from Lake Superior to the western end of Saganaga Lake, the Arrow River route, Lac LaCroix, Namakan River, the east end of Namakan Lake, and the waterways on the north side of Hunter Island.<sup>3</sup> These maps constitute the only available record of the field work done by the United States parties, although the

<sup>&</sup>lt;sup>3</sup> Map showing boundary claims of Great Britain and the United States, p. 210.

journal of the commissioners under the treaty of Ghent states that a report describing the astronomical observations made by the United States surveyor was submitted to them and ordered to be filed. The field work done by the British parties, however, besides being shown on their maps, is described in Thompson's journals together with their methods of surveying.

The control for the surveys made by the British parties consisted of astronomical observations made whenever time, opportunity, and the weather permitted. Compass traverses were made of the rivers and lakes; in the rivers the distances were estimated—on the lakes they were determined by the use of a patent log towed by a canoe. Islands were located by traverse, and the shore lines were traversed and sketched.

By July 24 the British party had completed much of their surveys and had reached Lake of the Woods. The next week was spent determining and marking the forty-ninth parallel of latitude on the west shore of that lake and in selecting, marking, and making observations at three points which were intended as alternative locations of the Northwesternmost Point of Lake of the Woods. The first of these three points, at the head of what is now known as Northwest Angle Inlet, after further observations made the following year by Doctor Tiarks, astronomer for the British Government, was accepted by the commissioners as the Northwesternmost Point of Lake of the Woods and was formally adopted as such by the Webster-Ashburton treaty of 1842.

After completing this work, Thompson spent a few days traversing Lake of the Woods and arrived again at the mouth of Rainy River on August 5. He apparently did not visit Rat Portage (Kenora) this season or consider it at this time as the possible location of the Northwesternmost Point of Lake of the Woods. He then proceeded eastward again, finishing as he went the surveys of those lakes which were not already completely surveyed.

On reaching Lac LaCroix, Thompson met his guide of the previous year, Sayer, alone with his family and nearly starving. Sayer gave him detailed information regarding the route to the height of land by way of Vermilion River, for which Thompson paid him with one calico shirt and a little ammunition. Work was continued eastward, short rations being supplemented by game secured from the Indians. By the first of September the surveys were finished and Pigeon River was reached. Thompson arrived at Fort William on September 7 and was informed that the United States party had left for the east 10 days previously in one canoe. Thompson arrived at Sault Ste. Marie on September 27 and found the United States party there. Both parties left soon after for Montreal via French River, Lake Nipissing, and the Ottawa River. They arrived at Montreal late in October and on the 25th of that month Thompson drew up a report on the season's surveys which he presented at the commissioners' conference. This report is as follows: Gentlemen,—

In obedience to the orders of your Honorable Board, we left La Chine on the 6th May and proceeded up the Ottawa River, from thence to Lakes Huron and Superior, having carried over the Great Carrying Place, we commenced the survey of all those Lakes and Rivers, that we had not yet fully examined, and thence proceeded to the Lake of the Woods; here we coasted the West side of the lake, minutely examining its shores, having arrived at the 49th degree of north latitude we there placed a heap of large stones with several pickets well driven into the ground, at the first angle of this Lake there being no stones within several miles we erected a square monument of Logs of 12 feet high by 7 feet width, the lower part of Oak, the upper part of Aspin and nailed to it a Tin Plate marked the North West Corner of the Lake of the Woods No. 1 proceeding northward at the second Angle of the Lake we erected a Pyramid of Stones 7 feet high by 4 feet square at the Base and a Cedar post in its centre nailed a Tin Plate pierced. The North West Corner of the Lake of the Woods, No. 2— proceeding still further northward at the third Angle of the Lake we erected a pyramid of Stones 8 feet high by 6 feet at the base and to an Oak Post placed in its Centre nailed a Tin Plate marked The North West Corner of the Lake of the Woods No. 3—proceeding several miles still farther northward, we found as last year the Land bend E and N without any considerable Angle we then returned among the Islands of this Lake by a route we had not before taken; to the entrance of the Rainy River and continued adding to the accuracy of our maps until we came to the Great Carrying Place. On the 6th September we arrived at Fort William and from thence returned to Montreal on the 21st October. We flatter ourselves we have paid that minute attention to the Countries we have surveyed as will enable us to produce maps of those Countries satisfactory to your Honorable Board. At every opportunity astronomical observations were made to ascertain the position of respective places.

Report of October 26, 1824.

While it seemed likely at this conference that the Pigeon River route would be adopted as the boundary, nevertheless the commissioners issued separate instructions for further surveys, the British commissioner directing that a survey be made of the Fond du Lac or St. Louis River route and the United States commissioner directing that a survey be made of the Kaministikwia route. These routes are shown on the map opposite page 210.

Thompson left Montreal on April 29, 1825, via the Ottawa River and reached Sault Ste. Marie on May 27. The next two weeks were spent surveying the St. Marys River. In the meantime Mr. Barclay, the British commissioner, Doctor Tiarks, astronomer for the British Government, and Mr. Hassler, astronomer for the United States Government, arrived and with Thompson went on to Fort William and the mouth of Pigeon River. Here Thompson was taken violently ill with dysentery and after waiting for several days hoping to recover, sent his son Samuel, who was acting as his assistant, with the best of his men to make the surveys of the St. Louis River route while he himself turned back to Fort William. Thence after a partial recovery he returned to Sault Ste. Marie, arriving on August 3. The next month he spent making additional surveys on the St. Marys River.

In the meantime his son carried on the surveys of the route through the St. Louis River, Embarras River, Lake Vermilion, and Vermilion River to Sand Point Lake. Maps of this route were filed with the reports of Commissioners Porter and Barclay, but no record has been found of the United States party's survey of the Kaministikwia route.

While these surveys were being made, Doctor Tiarks proceeded to Lake of the Woods, apparently for the purpose of definitely selecting the Northwesternmost Point. Apparently it had been decided from Thompson's surveys that this point should be either at Rat Portage (Kenora) or at the northern part of the bay now known as the Northwest Angle Inlet. Capt. W. J. Twining, chief astronomer of the United States section of the boundary survey of 1872–1876, says: <sup>4</sup>

This question was settled by Tiarks in favor of the latter, on the principle that the northwest point was that point at which, if a line were drawn in the plane of a great circle, making an angle of  $45^{\circ}$  with the meridian, such a line would cut no other water of the lake. He therefore

<sup>&</sup>lt;sup>4</sup> Reports upon the Survey of the Boundary between the Territory of the United States and the Possessions of Great Britain from the Lake of the Woods to the Summit of the Rocky Mountains, Washington, 1878; p. 80. See also Dr. Tiarks's report, in American Journal of Science and Arts, Vol. XV, p. 52.

determined the relative position of the two points in question by means of their latitude and longitude; the latitudes were fixed by means of the sextant, and the longitude by the mean of several chronometer determinations.

On September 4 the parties of Samuel Thompson and Commissioner Barclay reached Sault Ste. Marie; Barclay set out immediately for Montreal while the Thompsons, father and son, remained to complete the surveys on the St. Marys River, which they did by the end of September, thus completing the surveys under Article VII of the treaty of Ghent.

The survey equipment was then sold by auction at Sault Ste. Marie, but very little was realized, as none of the bidders had much cash. On October 2 the party set off for Montreal, but on this occasion went via Georgian Bay, Lake Simcoe, and York instead of via the Ottawa River. Montreal was reached on October 29.

The finished maps and reports of the surveyors were submitted to the commissioners at a conference held in New York in October, 1826. At a conference held a year later the commissioners decided that they were unable to reach an agreement on that portion of the boundary dealt with under Article VII of the treaty of Ghent and agreed to submit separate reports.

The maps, submitted by the surveyors to the commissioners, were the ones on which Webster and Ashburton later marked the boundary defined in the treaty signed by them in Washington on August 9, 1842.

## APPENDIX IV

## ELEVATIONS AND DESCRIPTIONS OF BENCH MARKS<sup>1</sup>

The elevations and the descriptions of all permanent bench marks established or used in the survey of the international boundary from the Northwesternmost Point of Lake of the Woods to Lake Superior are given on the following pages. The list includes bench marks of the United States Geological Survey, which were used for vertical control of the topographic surveys along Rainy River, and also a number of the bench marks of the Geodetic Survey of Canada. The elevations of the bench marks of the Geodetic Survey of Canada are given as published in 1929 <sup>2</sup> and their elevations were used as the basis of the final adjustment of the elevations of the other bench marks listed, including those of the United States Geological Survey. The elevations are in feet and are referred to mean sea-level datum.

|   | (feet)                               |    |
|---|--------------------------------------|----|
| Warroad, Roseau County, Minn.; 12 meters southwest of the intersection of Lake and State<br>Streets, on the public-school grounds, 50 meters east of the schoolhouse; iron post with bronze cap<br>marked "U. S. Geological Survey B. M. 1069"  | <sup>3</sup> 1, 0 <mark>67.</mark> 2 | 26 |
| Warroad, Roseau County, Minn.; on the public-school ground, near the fence, in front of and to the<br>west of the new schoolhouse; International Joint Commission bench mark, copper plug in<br>concrete block whose base extends 6 feet below the surface of the ground  | <sup>3</sup> 1, 068. 1               | .9 |
| Warroad, Roseau County, Minn.; 335 meters east of the Lake Street crossing of the Canadian<br>National Railway, 44 meters east of Mr. Moody's house, 12 meters north of the edge of Warroad<br>River, and 17 meters southeast of an outbuilding on Mr. Moody's grounds; U. S. Engineer<br>Corps bench mark No. 303, top of cap on iron post   | <sup>8</sup> 1, 065. 3               | 5  |
| Warroad, Roseau County, Minn.; in the west foundation wall of the post office, a concrete-block<br>building on the north side of Lake Street about 120 meters east of the Canadian National Railway,<br>1.9 meters from the southwest corner of the building and 0.12 meter below the concrete blocks;<br>Geodetic Survey of Canada bench mark No. 12–E, copper bolt marked '' G. S. C., B. M. 12–E'' | 1, 069. 2                            | 96 |
| Boundary Monument 924, Roseau County, Minn.; Provencher District, Manitoba; 33 miles<br>north of Warroad, Minn., 41 miles southwest of Kenora, Ontario; on the north side of Har-<br>rison Creek and the Old Dawson Road about 600 meters southwest of Northwest Angle<br>Inlet; International Joint Commission bench mark, bronze plug set in the concrete base of the<br>monument                   | 1, 065. 6                            | 57 |
| Oak Island in Lake of the Woods, Lake of the Woods County, Minn.; on the western extremity of Oak Island, on the highest point of ledge about 25 meters west of the fish house and about 3 meters from the water's edge; International Joint Commission bench mark, bronze disk set in the rock.  | 1, 063. 7                            | '9 |

| Lac La Croix, St. Louis County, Minn.; at the Lac La Croix end of the portage to Loon Lake, west of the track, about 14 meters north of reference monument 494 and about 41 meters northeast of reference monument 495; bronze disk set in the rock at extreme high-water mark   | 1, 190. 08                |
| Lac La Croix, St. Louis County, Minn.; near the Lac La Croix end of the portage to Loon Lake, about 2 meters east of the track and about 9 meters south of the south corner of the log ice-house; cross on rock  | 1, 19 <mark>5</mark> . 54 |
| Lac La Croix, St. Louis County, Minn.; at the extreme western end of Lac La Croix, at the eastern<br>end of the Dawson Portage between Lac La Croix and Sand Point Lake; a cross chiseled on a<br>bowlder 3 meters from the water's edge   | 1, 189. 63                |
| Lac La Croix, Rainy River District, Ontario; at the extreme eastern end of Lac La Croix, on the southwest end of the small island which is at the entrance to the small bay at the head of which is the northwest end of Bottle Portage; bronze disk set in rock about 7 meters from shore   | 1, 189. 62                |
| Iron Lake, Rainy River District, Ontario; at the west end of Iron Lake, about 330 meters northeast<br>of the dam at the outlet of the lake and about 270 meters southeast of the Iron Lake end of Bottle<br>Portage; bronze disk set in a rock about 2 meters in diameter  | 1, 221. 89                |
| Iron Lake, St. Louis County, Minn.; on a point of the mainland at the foot of the rapids between<br>Crooked and Iron Lakes, 15 meters southwest of a small island; bronze disk set in rock   | 1, 220. 94                |
| Crooked Lake, St. Louis County, Minn.; at the west end of Crooked Lake at the east end of the Curtain Falls Portage, 1 meter north of the trail and 5 meters from the falls; top of boundary reference monument 656, an 8-inch bronze post set in the smooth granite ledge   | 1, 251. 0                 |
| Crooked Lake, Rainy River District, Ontario; at the extreme southeastern end of Crooked Lake<br>near the falls from Basswood River, on the northwest side of a small rocky island which rises about<br>0.3 meter above high water; top of boundary reference monument 760, an 8-inch bronze post<br>set in rock  | 1, 252. 0                 |
| Basswood River, Lake County, Minn.; on the south side of the middle one of the three falls from<br>Basswood River into Crooked Lake; top of boundary reference monument 763, an 8-inch bronze<br>post set in the highest part of the bare rock just north of the portage trail and about 5 meters  | 1 074 2                   |
| above high water<br>Basswood River, Lake County, Minn.; on Basswood River on the north side and at the foot of   | 1, 274. 3                 |
| American Wheelbarrow Falls; bronze disk set in a large bowlder at the water's edge<br>Basswood River, Lake County, Minn.; on Basswood River at the west end of Horse Portage, the<br>portage around the falls at the outlet of Basswood Lake; bronze disk set in a bowlder 15 meters<br>east of the end of the portage and 5 meters from the water's edge                            | 1, 262. 61<br>1, 277. 48  |
| Basswood Lake, Lake County, Minn.; about 90 meters above the falls at the outlet of Basswood Lake<br>and about 30 meters south of the east end of the portage trail; bronze disk set in rock 6 meters from<br>the lake shore   | 1, 308. 43                |
| Basswood Lake, Lake County, Minn.; "Hoist" triangulation station; at the south end of the long<br>arm of the lake that terminates at Hoist Portage; about 12 meters west of the north end of the St.<br>Croix Lumber Co.'s bunkhouse, about 15 meters from the shore, and about 1.5 meters above the<br>level of the lake; bronze triangulation disk set in the smooth granite ledge | 1, 305. 80                |
| Basswood Lake, Lake County, Minn.; near the camp site of the lumber company at Prairie Portage, about 210 meters northwest of the rapids between Sucker and Basswood Lakes, on a large rock on a point which extends into the lake; top of boundary reference monument 831, an 8-inch bronze   |                           |
| post set in the rock   | 1, 308. 3                 |

APPENDIX IV

|   | Elevation<br>(feet)      |
|---|--------------------------|
| Basswood Lake, Lake County, Minn.; on the United States side of the rapids between Sucker and<br>Basswood Lakes, on a smooth outcrop of ledge about 200 meters below the dam and just west of the<br>trail to the site of the lumber camp; top of boundary reference monument 833, an 8-inch bronze<br>post set in the ledge  | 1, 327. 0                |
| Sucker Lake, Lake County, Minn.; at the northwest end of Sucker Lake, about 75 meters west of the south end of the Prairie Portage tramway and about 22 meters southwest of the dam; top of boundary reference monument 834, an 8-inch bronze post set in a rounded ledge   | 1, 351. 4                |
| Birch Lake, Lake County, Minn.; on the United States side of the stream connecting Carp and<br>Birch Lakes, about 185 meters downstream from Carp Lake Dam, about 30 meters upstream<br>from the Birch Lake Wharf, and about 5 meters above the level of the lake; top of boundary refer-<br>ence monument 850, an 8-inch bronze post set in ledge rock   | 1, 353. 6                |
| Carp Lake, Lake County, Minn.; at the United States end of Carp Lake Dam about 9 meters from<br>the sluice, on the trail leading from the dam to Birch Lake; top of boundary reference monument<br>854, an 8-inch bronze post set in the highest part of a smooth ledge   | 1, <mark>363</mark> . 9  |
| Cypress Lake, Lake County, Minn.; at the west end of Swamp Portage between Swamp and Cypress<br>Lakes, about 50 meters from the lake shore and about 3 meters from boundary monument 1 which<br>is a bronze post rising about 1.5 meters above the surface of the ground; top of boundary reference<br>monument 938, an 8-inch bronze post set in a smooth granite ledge                                | 1, 411. 2                |
| Swamp Lake, Rainy River District, Ontario; on the east shore of Swamp Lake, north of the outlet of Swamp Lake into Saganaga Lake and between the outlet and the portage trail; 21 meters south 17° west of boundary reference monument 945 and 0.12 meter east of a bronze disk marking triangulation station "Cartoon"; the surface of the rock is the bench mark.                                     | 1, 434. 53               |
| Saganaga Lake, Cook County, Minn.; about 30 meters west of the falls in the outlet of Marabocuf<br>Lake where it flows into Saganaga Lake, and about 6 meters above the level of the lake; top of<br>boundary reference monument 984, an 8-inch bronze post   | 1, 45 <mark>3</mark> . 3 |
| Maraboeuf Lake, Cook County, Minn.; about 130 meters south of the narrows of Horsetail Rapids<br>which are about three-fourths mile south of the outlet into Saganaga Lake, about 15 meters<br>from the shore and 6 meters above the level of the lake; top of boundary reference monument<br>998, an 8-inch bronze post set in the rock.   | 1, 463. 2                |
| Granite River, Thunder Bay District, Ontario; on the east shore of Granite River about 100 meters<br>above the rapids where the river empties into Round Lake; top of reference monument 1035, an<br>8-inch bronze post set in outcropping rock   | 1, 445. 2                |
| Granite River, Thunder Bay District, Ontario; "Chap" triangulation station; at the head of the fourth rapids and about 1 mile above Round Lake, 9.3 meters east of reference monument 1045; bronze disk set in a small rock at the water's edge   | 1, 449. 54               |
| Granite River, Thunder Bay District, Ontario; "Cutty" triangulation station; on the most north-<br>ern point of the shore of the second pond in Granite River below Granite Lake, about 100 meters<br>northwest of the second rapids and about 130 meters northeast of the third rapids, 18 meters<br>west of reference monument 1053; a bronze disk set in a ridge-shaped rock in a niche in the shore | 1, 453. 15               |
| Granite River, Thunder Bay District, Ontario; "Crumb" triangulation station; on the northeast<br>shore of the pond in Granite River between the first and second rapids below Granite Lake; 6.3<br>meters south of reference monument 1055; bronze disk set in an oblong rock at high-water mark.   | 1, 458. 64               |
| Granite River, Cook County, Minn.; on the west bank of Granite River about halfway down the first rapids below Granite Lake, 0.6 meter from the shore; top of reference monument 1048, an 8-inch bronze post set in a large rock  | 1, 461, 1                |
| Pine Lake, Cook County, Minn.; "Dud" triangulation station; on the east shore of Pine Lake,<br>near the west end of the portage across Pine Island about 35 meters north of the trail; bronze<br>disk set in rock   | 1, 463. 74               |
| Pine River, Cook County, Minn.; on the west side of a small pond in Pine River on the prominent<br>point of the shore line 160 meters south of the east end of the Pine Portage trail; on the summit<br>of the point about 7 meters above the water level; top of boundary reference monument 1078,<br>an 8-inch bronze post set in a rock  | 1, 529. 8                |

|  | Elevation           |
|--|---------------------|
| Pine River, Thunder Bay District, Ontario; at the east end of Blueberry Portage on the granite ridge 15 meters northeast of the cut in the rock through which the trail passes; 5 meters from and 2.5 meters above the shore line; top of boundary reference monument 1095, an 8-inch bronze post set in the rock.   | (feet)<br>1, 539. 1 |
| Magnetic Lake, Thunder Bay District, Ontario; just below the upper rapids at the outlet of Mag-<br>netic Lake on a large granite ledge; top of boundary reference monument 1105, an 8-inch bronze<br>post set in the most northern projection of the ledge   | 1, 549. 1           |
| Gunflint Lake, Cook County, Minn.; at the west end of Gunflint Lake on the point at the west side of the outlet into Magnetic Lake, about 30 meters south of the old railway bridge, on a rock near high-water mark; top of boundary reference monument 1110, an 8-inch bronze post set in the rock_   | 1,546.4             |
| Gunflint Lake, Thunder Bay District, Ontario; at the west end of Gunflint Lake, on the point at the east side of the outlet into Magnetic Lake, about 30 meters south of the old railroad bridge, on a large rock; top of boundary reference monument 1115, an 8-inch bronze post set in the rock.   | 1, 547. 7           |
| Gunflint Lake, Cook County, Minn.; at the east end of Gunflint Lake, on the south side of the stream flowing from Little Gunflint Lake; in front of the customhouse and about 3 meters east of the sidetrack of the Pigeon River Lumber Co.; top of boundary reference monument 1124, an 8-inch bronze post set in a granite rock.                                       | 1, 553. 1           |
| Little Gunflint Lake, Thunder Bay District, Ontario; "Canute" triangulation station; at the east<br>end of Little Gunflint Lake, on the north side of the stream flowing from Little North Lake,<br>about 6 meters from Little Gunflint Lake, about 4 meters from the stream, and 3.3 meters east<br>of boundary reference monument 1137; a bronze disk set in a bowlder | 1, 546. 07          |
| North Lake Railway Station, Thunder Bay District, Ontario; 30 meters west of North Lake railway station, 17 meters south of the Canadian National Railway track, in the north face of a concrete pier built for astronomical observations; Geodetic Survey of Canada bench mark No. 106–E, copper bolt marked "G. S. C., B. M. 106–E"                                    | 1, 565. 189         |
| North Lake, Thunder Bay District, Ontario; at the north end of Height-of-Land Portage between<br>North and South Lakes, 45 meters east of boundary monument 4, and 1.5 meters from the door<br>of a house; bronze disk set in a bowlder  | 1, 560. 64          |
| South Lake, Thunder Bay District, Ontario; "Crown" triangulation station; about 70 meters east of the south end of Height-of-Land Portage trail between North and South Lakes, near the edge of a cliff about 10 meters high, and about 9 meters from the water's edge; bronze disk set in the rock  | 1, 578. 20          |
| South Lake, Cook County, Minn.; at the east end of South Lake about 8 meters west of the west<br>end of the portage trail, about 3 meters from the water's edge, and 0.3 meter north of boundary<br>reference monument 1166; bronze disk stamped "1552" set in the rock  | 1, 553. 35          |
| Rose Lake, Cook County, Minn.; at the west end of Rose Lake between the portage and the rapids from Rat Lake, 5.4 meters north of boundary reference monument 1172, 16.5 meters from boundary reference monument 1173, and 0.2 meter north of "Duke" triangulation station; bronze disk stamped "1526" set in the rock   | 1, 522. 99          |
| Rose Lake, Thunder Bay District, Ontario; at the east end of Rose Lake on a sharp prominent point<br>about 600 meters northwest of the west end of the Long Portage trail from Watap Lake; about<br>15 meters northeast of boundary reference monument 1205; bronze disk stamped "1525" set in the<br>rock   | 1, 525. 43          |
| Watap Lake, Thunder Bay District, Ontario; at the west end of Watap Lake on the small knoll<br>about 50 meters south of the Long Portage trail and about the same distance from the mouth of<br>the stream which connects Rose and Watap Lakes; bronze disk stamped "1673" set in a rock,<br>0.08 meter from boundary reference monument 1211                            | 1, 673. 67          |
| Mountain Lake, Cook County, Minn.; Thunder Bay District, Ontario; near the boundary at the west end of Mountain Lake and the east end of the portage trail from Watap Lake, about 12 meters from the water's edge and about 3 meters from boundary monument 9; bronze disk stamped "1644" set in rock  | 1, 650. 19          |
| Mountain Lake, Thunder Bay District, Ontario; at the east end of Mountain Lake about 200 meters<br>west of the outlet and 0.20 meter south of boundary reference monument 1259; bronze disk<br>stamped "1645" set in the rock  | 1, 645. 34          |

APPENDIX IV

|   | Elevation<br>(feet) |
|---|---------------------|
| Moose Lake, Cook County, Minn.; at the west end of Moose Lake in an old logging road, about 15 meters south of the boundary stream, and about 73 meters from the lake; bronze disk stamped "1500" set in a rock   | 1, 499. 45          |
| North Fowl Lake, Thunder Bay District, Ontario; at the west end of North Fowl Lake, about 30 meters north of the stream which connects Moose and North Fowl Lakes, about 30 meters south of the portage trail, and about 10 meters south of boundary reference monument 1283; bronze disk stamped "1440" set in a bowlder   | 1, 439. 82          |
| South Fowl Lake, Thunder Bay District, Ontario; 6 meters north of the Canadian end of the dam at the outlet of South Fowl Lake; bronze disk stamped "1448" set in the ledge 1.2 meters above the top of the dam   | 1, 447. 93          |
| Pigeon River, Thunder Bay District, Ontario; near the shore of Pigeon River, about three-fourths<br>mile south of South Fowl Lake and about 50 meters downstream from the second dam below<br>South Fowl Lake Dam; a bronze disk stamped "305" set in the same rock in which boundary<br>reference monument 1288 is set   | 1, 380. 18          |
| Pigeon River, Cook County, Minn.; about 4½ miles below the South Fowl Lake Dam, and at the lower end of along stretch of dead water, about 15 meters north of the west end of the portage trail, about 6 meters from the water's edge, and about 85 meters southwest of reference monument 1304; bronze disk stamped "1356" set in a large rock.                                | 1, 356. 32          |
| Pigeon River, Cook County, Minn.; about 45 meters south of Partridge Falls, about 24 meters from<br>Pigeon River and about 3 meters north of the portage trail; bronze disk stamped "1328" set in<br>the rock   | 1, 328. 00          |
| Pigeon River, Thunder Bay District, Ontario; about 25 meters south of the dam at The Cascades,<br>about 2 meters south of boundary reference monument 1324 and about 1 meter south of a<br>bronze disk stamped "199"; bronze disk stamped "1271" set in the ledge   | 1, 270. 49          |
| Pigeon River, Thunder Bay District, Ontario; traverse station 181; about 1 mile below The Cas-<br>cades, about 120 meters below the point where the river leaves the long canyon and turns<br>abruptly to the south, and about 130 meters southwest of reference monument 1325; bronze disk<br>stamped "181" set in a large rock on the river bank directly opposite a wing dam | 1, 038. 60          |
| Pigeon River, Thunder Bay District, Ontario; about 1% miles above the mouth of Arrow River<br>and about one-half mile above reference monument 1333, on a large rock about 3 meters off shore,<br>opposite a large mud slide; bronze disk stamped "967" set in the rock 0.3 meter west of a bronze<br>disk which marks traverse station 153 and which is stamped "153"          | 966, 25             |
| Pigeon River, Thunder Bay District, Ontario; traverse station 145; about 1% miles above the mouth of Arrow River and about 115 meters below reference monument 1333; close to the shore line on a rocky point just above a wide part of Pigeon River; bronze disk stamped "145" set in the rock   | 954. 97             |
| Pigeon River, Thunder Bay District, Ontario; traverse station 143; about 1 mile above the mouth<br>of Arrow River on the north bank of Pigeon River at the mouth of a small stream; bronze disk<br>stamped "143" set in a large rock  | 940.99              |
| Pigeon River, Thunder Bay District, Ontario; traverse station 101; on the north side of Pigeon River, about 100 meters below the Scott Highway Bridge and about 120 meters below reference monument 1340, about 1.5 meters back from the edge of a cliff and about 12 meters above the water; bronze disk stamped "101" set in the rock.  | 926.12              |
| Pigeon River, Thunder Bay District, Ontario; on the north side of Pigeon River, about 100 meters<br>below the Scott Highway Bridge, and about 120 meters below reference monument 1340; about 15<br>meters north of traverse station 101 and about 15 meters above the water; bronze disk stamped<br>"935" set in the rock.   | 934.36              |
| Pigeon River, Thunder Bay District, Ontario; traverse station 89; on the north bank of Pigeon River about 2 miles above Horn Rapids, at the head of some very swift rapids and opposite a large, low island, and about 100 meters north of reference monument 1342; bronze disk stamped "89" set in a large rock close to the water's edge                                      | 872.00              |
| Pigeon River, Thunder Bay District, Ontario; traverse station 77; on the north bank of Pigeon River, about one-half mile above Horn Rapids and about 50 meters above the mouth of a small stream; bronze disk stamped "77" set in a large rock  | 849.71              |

| Pigeon River, Thunder Bay District, Ontario; on the north bank of Pigeon River, at the head of  | Elevation<br>(feet) |
|---|---------------------|
| Horn Rapids, about 22 meters south of the road, about 9 meters from the river's edge, and about<br>8 meters east of boundary reference monument 1343; bronze disk stamped "861" set in the  |                     |
| rock  | 860, 98             |
| Pigeon River, Thunder Bay District, Ontario; on the Canadian side of Pigeon River, at the lower and of Little Falls on a shoulder of the ledge about 3 meters above high water and 0.3 meter from boundary reference monument 1347; bronze disk stamped "793" set in the rock | 792. 18             |
| Pigeon River, Thunder Bay District, Ontario; on the north side of Pigeon River at High Falls, about 12 meters north of the sluice-way and 0.45 meter east of reference monument 1351; bronze disk stamped "722" set in the rock-  | 721. 29             |
| Pigeon River, Thunder Bay District, Ontario; on the Canadian side at the mouth of Pigeon River; copper bolt in top of International Waterways Commission monument 3, a concrete pier  | 608. 42             |

#### APPENDIX V

#### GEOGRAPHIC POSITIONS AND DESCRIPTIONS OF TRIANGULATION AND TRAVERSE STATIONS

In this appendix will be found the geographic positions of all the boundary triangulation and traverse stations, boundary monuments, and boundary reference monuments, together with descriptions of the locations of all the monuments and of most of the triangulation and traverse stations. The latitudes and longitudes of the stations are on the North American geodetic datum of 1927. Azimuths and lengths of lines from each station to adjacent stations are given. The azimuths are reckoned clockwise from the south. The distances are reduced to mean sea-level values.

#### EXPLANATION OF TABLES

The latitudes and longitudes of the stations in the table of first-order triangulation are given to thousandths of seconds, the azimuths are given to hundredths of seconds, and the logarithms of the distances are given to seven places of decimals. The latitudes and longitudes of the stations of the first-order traverse are given to thousandths of seconds, the azimuths to tenths of seconds, and the logarithms to seven places of decimals. In the table of major triangulation, which is subsidiary to the first-order triangulation, the latitudes and longitudes are given to thousandths of seconds, the azimuths to tenths of seconds, and the logarithms to six places of decimals. In the tables of minor triangulation, the latitudes and longitudes are given to hundredths of seconds, the azimuths to even seconds, and the logarithms to five places of decimals.

The azimuth and length of any line of the triangulation or traverse will be found opposite the second of the two stations of that line as they appear in the list. The logarithms in the tables have been derived from the computations and the distances given have been obtained from their corresponding logarithms.

The following abbreviations have been used throughout the tables: "Mon." for Monument, "Ref." for Reference, and "ecc." for eccentric station.

At the end of the appendix, page 587, is an index to all stations contained in the tables. The use of this index and the sketches of the triangulation and traverse which accompany this report under a separate cover will materially facilitate obtaining any specific geodetic data desired. In selecting stations upon which to base new triangulation, points of the first order or major schemes of triangulation should be chosen in preference to those of a lower order. In searching for a particular triangulation station on the ground reference should be made to the boundary maps and triangulation sketches as well as to the printed description of the station.

| Station                           | Latitude and longitude  | Azimuth  | Back<br>azimuth   | To station  | Distance<br>(meters)                      | Logarithm   |

### PIGEON RIVER, MINOR SCHEMES—Continued

The stations in the following list are arranged according to the class of triangulation to which they belong and also according to geographical subdivisions of the boundary. The stations available for use in any region may be determined by inspecting the triangulation sketches which accompany this report under a separate cover. The index to triangulation and traverse stations (p. 587) should be consulted if the name of the station for which a description is sought is known.

Within the parentheses in each description immediately following the name of the station is the name of the Province or State and the district or county in which the station is situated, and the name of the Government organization or the member of the boundary survey party that established the station. This person is generally the chief of party; in some cases, however, he is the member of the party who was responsible for securing the desired degree of precision in the measurement of the angles. This association of the name of the station with the name of the person who established the station and whose name appears on the field notebooks is intended to facilititate, in later years, any reference to these data in the Government archives. The first date within the parentheses is that of the establishment of the station; the last date is the year in which the station was last occupied or inspected.

All azimuths given in the descriptions are reckoned continuously from true south around by west to 360°, south being 0°, west 90°, north 180°, and east 270°. Where magnetic azimuths or bearings are given, they are indicated as such.

All distances are horizontal unless otherwise stated.

The standard station marks and boundary monuments (see pp. 91 and 92, and figs. 1 and 2, p. 89) are described in detail on page 90.

Any person who finds that any boundary monument or any station in this list has been disturbed or damaged is requested to send such information to the Commissioner, International Boundary Commission, Washington, D. C., or Ottawa, Ontario.

#### NORTHWESTERNMOST POINT OF LAKE OF THE WOODS TO LAKE SUPERIOR, REFERENCE MONUMENTS

**Reference Monument 1** (East Reference Monument) (Ontario, Kenora District; C. H. Sinclair, 1913; 1922).— On the north shore of Northwest Angle Inlet of Lake of the Woods, about 40 miles southwest of Kenora, Ontario, and 34 miles north of Warroad, Minn.; 7 miles west of Magnusons Island and one-half mile north of the entrance to Harrison Creek, at the edge of the poplar growth on the east side of the meadow; the monument is 465.1 meters due east of the north terminus of the meridional boundary between Manitoba and Minnesota.

Station mark: A cast-iron obelisk, 5 feet high, marked "Reference Mark" on the east face, set in a square concrete base.

**Reference Monument 2** (West Reference Monument) (Manitoba, Provencher District; C. H. Sinclair, 1913; 1922).—On the southwest shore of Northwest Angle Inlet of Lake of the Woods, about 40 miles southwest of Kenora, Ontario, and 34 miles north of Warroad, Minn.; 7½ miles west of Magnusons Island and three-fourths mile northwest of the entrance to Harrison Creek, just north of the road allowance at the south end of section 13, township 5, range 17 east, at the edge of the poplar growth; the monument is 386.6 meters due west of the north terminus of the meridional boundary between Manitoba and Minnesota.

Station mark: A cast-iron obelisk, 5 feet high, marked "Reference Mark" on the west face, set in a square concrete base.

Monument 924 (Manitoba, Provencher District; Minnesota, Lake of the Woods County; Boundary Commission, 1874; C. H. Sinclair, 1913).—About 41 miles southwest of Kenora, Ontario, and 33 miles north of

Warroad, Minn.; about three-eighths mile from the southwest shore of Northwest Angle Inlet of Lake of the Woods and about 100 meters north of Harrison Creek.

Station mark: A cast-iron obelisk, 5 feet high, set in a square concrete base.

Monument 925 (Manitoba, Provencher District; Minnesota, Lake of the Woods County; Boundary Commission, 1874; C. H. Sinclair, 1913; 1922).—About 41 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the southwest shore of Northwest Angle Inlet of Lake of the Woods. It is about 0.4 mile northwest of the mouth of Harrison Creek and about 80 meters from the shore line.

Station mark: A cast-iron obelisk, 5 feet high, set in a square concrete base.

Reference Monument 3 (Ontario, Kenora District; J. J. McArthur, 1912; 1922).—About 40 miles southwest of Kenora, Ontario, and 34 miles north of Warroad, Minn.; on the north shore of Northwest Angle Inlet of Lake of the Woods, 7 miles west of Magnusons Island and just north of the entrance to Harrison Creek; monument 1 is 1,900 feet northwest. Monument 3 is set in low, wet ground about 300 feet from the tree line. Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete

base.

**Reference Monument 4** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 40 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the south shore of Northwest Angle Inlet of Lake of the Woods, 6 miles west of Magnusons Island, and on the east side of the entrance to Bear Creek; the monument is on solid ground in the poplar wood close to the right bank of the creek.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 5 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 39 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the north shore of Northwest Angle Inlet of Lake of the Woods, 6 miles west of Magnusons Island, opposite the entrance to Bear Creek; the monument is in low wet ground close to the tree line about on line with the general direction in which Bear Creek flows.

Station mark: A wrought-iron post, about 12 inches high, set in a square concrete base.

**Reference Monument 6** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 39 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the south shore of Northwest Angle Inlet, 5 miles west of Magnusons Island, near the east side of the entrance to Poplar Creek; the monument is in low wet ground close to the tree line.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 7 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 39 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the north shore of Northwest Angle Inlet of Lake of the Woods, 5 miles west of Magnusons Island, opposite the entrance to Poplar Creek; the monument is in low wet ground close to the tree line about on line with the general direction in which Poplar Creek flows.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 8 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 39 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the south shore of Northwest Angle Inlet of Lake of the Woods, 4 miles west of Magnusons Island, on the east side of the more eastern of two narrow inlets about 500 feet deep and 700 feet apart; the monument is in low wet ground.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 9 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 38 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the north side of Northwest Angle Inlet of Lake of the Woods, 4 miles west of Magnusons Island and due north of reference monument 8; the monument is in low wet ground close to the tree line.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 10 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 39 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the south shore of Northwest Angle Inlet of Lake of the Woods, nearly 3 miles west of Magnusons Island; about 1,000 feet east of the entrance to a creek 1 mile southwest of reference monument 11; the monument is in low wet ground about 200 feet from the tree line.

Reference Monument 11 (Ontario, Kenora District; J. J. McArthur, 1912; 1922).—About 38 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; in Northwest Angle Inlet of Lake of the Woods, 2 miles west of Magnusons Island on a rocky island about 200 feet long, near several larger islands; the monument is on the bare rock top of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 12 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 39 miles southwest of Kenora, Ontario, and 33 miles north of Warroad, Minn.; on the south shore of Northwest Angle Inlet of Lake of the Woods, 2 miles west of Magnusons Island, about 300 feet from the west side of a narrow inlet due south of reference monument 11; the monument is in low wet ground about 700 feet from the tree line.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 13** (Ontario, Kenora District; J. J. McArthur, 1912; 1922).—About 37 miles southwest of Kenora, Ontario, and 34 miles north of Warroad, Minn.; on the north shore of Northwest Angle Inlet of Lake of the Woods, 1 mile west of Magnusons Island; on the top of the more western of two knolls on a prominent rocky point. The monument is about 150 feet from the shore and 30 feet above the water level.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 14** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—About 39 miles southwest of Kenora, Ontario, and 34 miles north of Warroad, Minn.; on the south side of Northwest Angle Inlet of Lake of the Woods, 1 mile southwest of Magnusons Island and due south of reference monument 13; in shallow water near the floating bog which forms the shore.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 15** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 36 miles southwest of Kenora, Ontario, and 35 miles north of Warroad, Minn.; on a rocky knoll on the north side of Northwest Angle Inlet of Lake of the Woods, three-fourths mile north of Magnusons Island and one-half mile west of Buckete Island. The monument is about 300 feet from the shore and 50 feet above the high-water mark.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 16** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 36 miles southwest of Kenora, Ontario, and 35 miles north of Warroad, Minn.; on the northwest end of Magnusons Island, at the entrance of Northwest Angle Inlet of Lake of the Woods, about 1,500 feet west of the ridge which lies in a north and south direction on the island. The monument is in low wet ground close to the shore; a long narrow belt of weeds extends to the north.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 17** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 36 miles southwest of Kenora, Ontario, and 35 miles north of Warroad, Minn.; on the southwest end of Buckete Island at the entrance to Northwest Angle Inlet of Lake of the Woods. The monument is about 100 feet from the shore and 400 feet east of the end of the point and is a few feet above the high-water mark.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 18** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 36 miles southwest of Kenora, Ontario, and 35 miles north of Warroad, Minn.; on the north side of Magnusons Island, the island at the entrance to Northwest Angle Inlet of Lake of the Woods; on a rock ledge due south of reference monument 17, close to the shore.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 19** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 35 miles southwest of Kenora, Ontario, and 36 miles north of Warroad, Minn.; on the small island in Lake of the Woods one-half mile north of American Point and 500 feet east of the long low island southeast of Buckete Island at the entrance to Northwest Angle Inlet of Lake of the Woods.

. Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 20 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 35 miles southwest of Kenora, Ontario, and 36 miles north of Warroad, Minn.; on the east end of American Point on an island at the entrance to Northwest Angle Inlet of Lake of the Woods, the next island east of Magnusons Island.

Station-mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 21** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 35 miles southwest of Kenora, Ontario, and 36 miles north of Warroad, Minn.; on the west end of the large island one-half mile east of Buckete Island and northeast of American Point, at the entrance to Northwest Angle Inlet.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

#### Reference Monument 22.—Destroyed.

**Reference Monument 23** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 35 miles southwest of Kenora, Ontario, and 36 miles north of Warroad, Minn.; on the island about 1,000 feet long in an east and west direction, 1,500 feet northeast of the east end of American Point, at the entrance to Northwest Angle Inlet. The monument is on the south side of the island, toward the west end; reference monument 21 is about 1,200 feet northwest.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 24 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—About 34 miles southwest of Kenora, Ontario, and 36 miles northeast of Warroad, Minn.; on the island in Lake of the Woods, 1,200 feet long in a north and south direction, one-third mile north of Brush Island, and 2 miles southeast of the entrance to Northwest Angle Inlet. The monument is on the east side of the island, toward the north end. Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place,

Reference Monument 25 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 34 miles southwest of Kenora, Ontario, and the same distance northeast of Warroad, Minn.; on the small flat island in Lake of the Woods, 200 feet off the east side of Brush Island; about 3 miles southeast of the entrance to Northwest Angle Inlet.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 26** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—On Brush Island in Lake of the Woods, about 34 miles southwest of Kenora, Ontario, and 36 miles northeast of Warroad, Minn.; on the northeast end of the island, about 3 miles southeast of the entrance to Northwest Angle Inlet. There is an island about 300 feet long 700 feet to the east.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 27 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 34 miles southwest of Kenora, Ontario, and 36 miles northeast of Warroad, Minn.; on the low island in Lake of the Woods, about 300 feet in diameter, 700 feet off the east side of Brush Island, about 3 miles southeast of the entrance to Northwest Angle Inlet. The monument is on the south end of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 28** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—On the large island south of Windfall Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario; at the southwest end of the island, 2,000 feet north of the west end of Passage Island. The part of the island on which the monument is situated is separated from the main island by a marsh.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 29** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—On Passage Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario. The monument is at the west end of the island (this is a narrow island nearly a mile long in an east and west direction northeast of Flag Island). Reference monument 28 is about 2,200 feet northwest.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 30** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—On Flag Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario; on the northeast side of the island, one-fourth mile southeast of the prominent point at the north end of the island. Reference monument 29 is about 1,200 feet north.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 31** (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—About 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario; on the very small island in Lake of the Woods, 500 feet from the most southern point of Cyclone Island and 1,500 feet north of the northwest point of Oak Island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 32** (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—On Oak Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario; on the north end of the island. The monument is at the northwest side of the bay, 1,000 feet from the northwest point of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 33 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—On Center Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario; at the south end of the island which is 1,500 feet in diameter and lies between Cyclone and Oak Islands.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 34 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—On Oak Island, in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario; on the northeast point of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 35 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—On an island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 34 miles southwest of Kenora, Ontario. The monument is on the west end of the small island 800 feet east of the northeast end of Oak Island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 36 (Minnesota, Lake of the Woods County; J. J. McArthur, 1912; 1917).—On Oak Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 35 miles southwest of Kenora, Ontario. The monument is on the east side of the island on a point at the south side of a large bay and is about 900 feet west of the northwest end of Squaw Island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 37 (Ontario, Kenora District; J. J. McArthur, 1912; 1917).—On Squaw Island in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 35 miles southwest of Kenora, Ontario; on the west side of the northwest end of the island. Reference monument 36, on the east side of Oak Island, is about 900 feet west.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 38** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—About 35 miles northeast of Warroad, Minn., and 36 miles south of Kenora, Ontario; on the small island in Lake of the Woods three-fourths mile south of the southeast point of Oak Island. The monument is on the south side of the island. Reference monument 39 is one-half mile east.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 39** (Ontario, Kenora District; J. J. McArthur, 1913; 1917).—About 35 miles northeast of Warroad, Minn., and 36 miles south of Kenora, Ontario; on the small island in Lake of the Woods one-half mile south of the southwest point of Squaw Island. The monument is on the west end of the island. Reference monument 38 is one-half mile west.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 40** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—About 32 miles northeast of Warroad Minn., and 35 miles northwest of Rainy River, Ontario; on the small island in Lake of the Woods one-third mile west of Bear Island and three-fourths mile east of the north end of Hay Island. The latter is a low triangular island, each side measuring about three-fourths mile.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 41** (Ontario, Kenora District; J. J. McArthur, 1913; 1917).—On Bear Island in Lake of the Woods, about 32 miles northeast of Warroad, Minn., and 35 miles northwest of Rainy River, Ontario. The monument is on the most western point of the island, one-third mile east of reference monument 40.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 42 (Minnesota Lake of the Woods County; J. J. McArthur, 1913; 1917).—On an island in Lake of the Woods, about 31 miles northeast of Warroad, Minn., and 34 miles northwest of Rainy River, Ontario.

The monument is on the east end of the island, which is about 1,000 feet long and lies about 2,000 feet northwest of the northwest point of Big Island, 2,000 feet southeast of the east end of Hay Island, and the same distance southwest of Bear Island. Hay Island is the low triangular island, each side measuring about three-fourths mile. Reference monument 41 is 1 mile north.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 43 (Ontario, Kenora District, J. J. McArthur, 1913; 1917).—On Big Island in Lake of the Woods, about 31 miles northeast of Warroad, Minn., and 34 miles northwest of Rainy River, Ontario; on the most northwestern point of the island. The monument is on the west side of and about 200 feet south of the end of the point. Reference monument 42 is about one-half mile north.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

**Reference Monument 44** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—On Rose Island in Lake of the Woods, about 29 miles northeast of Warroad, Minn., and the same distance northwest of Rainy River, Ontario; 1,500 feet off the south end of Sugar Point, the point between two large bays on the west side of Big Island. The monument is about 300 feet northeast of the south point of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 45 (Ontario, Kenora District; J. J. McArthur, 1913; 1917).—On an island in Lake of the Woods, about 29 miles northeast of Warroad, Minn., and the same distance northwest of Rainy River, Ontario; 300 feet off the south end of Sugar Point, the point between two large bays on the west side of Big Island. The monument is on the west side of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 46 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—On an island in Lake of the Woods, about 29 miles northeast of Warroad, Minn., and 27 miles northwest of Rainy River, Ontario; one-half mile southwest of the point of Big Island that is midway between the south end of Big Island and Sugar Point. The monument is on the east end of the island.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 47 (Ontario, Kenora District; J. J. McArthur, 1913; 1917).—On Big Island in Lake of the Woods, about 29 miles northeast of Warroad, Minn., and 27 miles northwest of Rainy River, Ontario; near the south end of the point of Big Island that is midway between the south end of Big Island and Sugar Point.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in concrete in rock in place.

Reference Monument 48 (Minnesota, Lake of the Woods County; Jesse Hill, 1917).—On an island in Lake of the Woods, about 12½ miles northwest of Baudette, Minn., and Rainy River, Ontario; 2 miles north of the mouth of Rainy River. The monument is on the most eastern knoll on the long narrow island one-half mile southwest of the two lighthouses.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 49 (Ontario, Rainy River District; J. J. McArthur, 1913).—On an island in Lake of the Woods, about 13½ miles northwest of Baudette, Minn., and Rainy River, Ontario; 3 miles north of the mouth of Rainy River. The monument is on the high knoll near the middle of the island one-half mile northeast of the two lighthouses.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a concrete base.

Reference Monument 50 (Minnesota, Lake of the Woods County; J. J. McArthur, 1917).—In section 13, township 162 north, range 32 west, on the point at the west side of the mouth of Rainy River, about 11 miles northwest of Baudette, Minn., and Rainy River, Ontario; a little over one-half mile north of Wheelers Point (the long point on the left side of the river near the mouth). The monument is near the shore and above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 51 (Ontario, Rainy River District; J. J. McArthur, 1917).—In Spohn Township, at the east side of the mouth of Rainy River near where the shore turns from a northerly to an easterly direction toward McGinnis Creek (1 mile distant), about 11½ miles northwest of Baudette, Minn., and Rainy River, Ontario. The monument is on low ground below the high-water mark.

Reference Monument 52 (Minnesota, Lake of the Woods County; J. J. McArthur, 1917).—In section 19, township 162 north, range 31 west, on the west side of Rainy River, about 10½ miles northwest of Baudette, Minn., and Rainy River, Ontario, about ½ mile east of the fish house of the Armstrong Trading Co.; 28 feet off the bank at the tip of Wheelers Point (the long point near the mouth of the river). The monument is below the high-water mark.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 53** (Ontario, Rainy River District; J. J. McArthur, 1917).—In the Wild Lands Reserve, section 8, on the east side of Rainy River, about 10½ miles northwest of Baudette, Minn., and Rainy River, Ontario; one-third mile southeast of Wheelers Point and about 1,000 feet southwest of a small inlet on the Canadian side of the river.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 54 (Minnesota, Lake of the Woods County; J. J. McArthur, 1917).—In section 24, township 162 north, range 32 west; on the west side of Rainy River, about 10 miles northwest of Baudette, Minn., and Rainy River, Ontario; one-half mile southwest of the long point (Wheelers Point) near the mouth of the river. The monument is just below the bank.

Station mark: A wrought-iron post, about 12 inches bigh and 2 inches square, set in a square concrete base.

**Reference Monument 55** (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 16; on the right side of Rainy River, about 9½ miles northwest of Baudette, Minn., and Rainy River, Ontario; 1 mile above the long point, near the mouth of the river, just south of a sawmill. The monument is above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base. A small tower was erected over the monument.

**Reference Monument 56** (Minnesota, Lake of the Woods County, J. J. McArthur, 1917).—In section 25, township 162 north, range 32 west; on the left side of Rainy River, about 9½ miles northwest of Baudette, Minn., and Rainy River, Ontario; 1 mile above the long point near the mouth of the river. The monument is just below the bank and 200 feet north of a small creek. Reference monument 55 is about 2,000 feet east.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 57 (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 16; on the right side of Rainy River, about 9 miles northwest of Baudette, Minn., and Rainy River, Ontario; one-half mile below Wilson Creek. The monument is just above the bank north of a little inlet. Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 58 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 36, township 162 north, range 32 west; on the left side of Rainy River, about 9 miles northwest of Baudette, Minn., and Rainy River, Ontario; one-half mile below Wilson Creek. The monument is above the bank 200 feet north of a little creek near a frame house.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 59 (Ontario, Rainy River District, J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 16; on the right side of Rainy River, about 8½ miles northwest of Baudette, Minn., and Rainy River, Ontario; on the north side of the mouth of Wilson Creek. The monument is just above the bank near a log house.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 60 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 36, township 162 north, range 32 west; on the left side of Rainy River, about 8½ miles northwest of Baudette, Minn., and Rainy River, Ontario; southwest of the mouth of Wilson Creek, between two small creeks about 700 feet apart and 200 feet from the southern one; about 250 feet north of the farmhouse of Charles Miller. The monument is close to the shore and above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 61** (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 24; on the right side of Rainy River, about 7½ miles northwest of Baudette, Minn., and Rainy River, Ontario; two-thirds mile south of Wilson Creek, well above the bank in a small clearing, east and a little north of reference monument 62.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 62 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 1, township 161 north, range 32 west; on the left side of Rainy River, about 7½ miles northwest of Baudette, Minn., and Rainy River, Ontario; where the shore takes a slight jog to the west one-third mile north of Corstein Creek, and about 150 feet east of the farmhouse of Andrew Johnson. The monument is close to the shore and above the bank.

Reference Monument 63 (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 32; on the right side of Rainy River, about 7 miles northwest of Baudette, Minn., and Rainy River, Ontario; one-fourth mile north of a small creek. The monument is close to the shore and above the bank. Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 64 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 1, township 161 north, range 32 west; on the left side of Rainy River, about 7 miles northwest of Baudette, Minn., and Rainy River, Ontario; on a point about one-fourth mile south of Corstein Creek and nearly a mile north of Wabanica Creek.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 65** (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 40; on the right side of Rainy River, about 6 miles northwest of Baudette, Minn., and Rainy River, Ontario; east and a little south of the mouth of Wabanica Creek and about one-half mile northwest of a smaller creek on the Canadian side.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 66 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 6, township 161 north, range 31 west; on the left side of Rainy River about 7 miles northwest of Baudette, Minn., and Rainy River, Ontario; two-thirds mile north of the mouth of Wabanica Creek and 1,000 feet south of the point on which reference monument 64 is situated; close to the shore and above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 67** (Ontario, Rainy River District; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—In the Wild Lands Reserve, section 41; on the right side of Rainy River, about 5½ miles northwest of Baudette, Minn., and Rainy River, Ontario; 1 mile southeast of the mouth of Wabanica Creek; between the road and the river bank in front of the farmhouse of Frank Reid, about 400 feet south of the bend of the road; 18 feet from the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 68 (Minnesota, Lake of the Woods County; J. J. McArthur, 1917).—In section 7, township 161 north, range 31 west; on the left side of Rainy River, about 6 miles northwest of Baudette, Minn., and Rainy River, Ontario; 1,000 feet south of Wabanica Creek and 600 feet southeast of the Lutheran Church; close to the shore and above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 69 (Ontario, Rainy River District; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—In the Wild Lands Reserve, section 41; on the right side of Rainy River, about 5 miles northwest of Baudette, Minn., and Rainy River, Ontario; on the northeast side of the road about 500 feet northwest of the schoolhouse near the farm buildings of Oscar Nelson. The monument is about 60 feet from the bank and just north of it is an inlet 100 feet wide extending 800 feet inland.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 70 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 18, township 161 north, range 31 west; on the left side of Rainy River, 5¾ miles northwest of Baudette, Minn., and Rainy River, Ontario; two-thirds mile upstream from the Lutheran Church on Wabanica Creek; 500 feet north of a small creek. The monument is close to the edge of a high bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 71** (Ontario, Rainy River District; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—In the Wild Lands Reserve, section 48; on the right side of Rainy River, 4½ miles northwest of the bridge between Baudette, Minn, and Rainy River, Ontario; on the low point on the north side of the small creek about on line with the direction of flow of Winter Road River.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 72 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1922).—In section 18, township 161 north, range 31 west; on the left side of Rainy River, about 5 miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; above the high bank, in a clearing just north of a good sized creek 1 mile south of Wabanica Creek; about midway between a large creek and a smaller one, which are 800 feet apart. Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 73** (Ontario, Rainy River District; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—In the Wild Lands Reserve, section 49; on the right side of Rainy River, 4 miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; above the bank about 200 feet south of the mouth of the creek on the Canadian side, a little upstream from the mouth of Winter Road River.

**Reference Monument 74** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1922).—In section 17, township 161 north, range 31 west; on the left side of Rainy River, 4½ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; 250 feet from the north side of the mouth of Winter Road River, close to the shore and above the bank. The monument is close to a group of farm buildings.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 75 (Ontario, Rainy River District; J. J. McArthur, 1913; 1922).—In the Wild Lands Reserve, section 51; on the right side of Rainy River, 3 miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; opposite a creek on the United States side of the river 1 mile upstream from the mouth of Winter Road River. The monument is on a low point where the approach to the shore is blocked by an accumulation of deadheads and washed-up limbs of trees; best reached by landing near reference monument 77, about 1,000 feet south.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 76** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1922).—In section 20, township 161 north, range 31 west; on the left side of Rainy River, 4 miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; 1,400 feet upstream from the mouth of Winter Road River. It is in thick woods, above the bank, and close to the shore.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 77 (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 51; on the right side of Rainy River, 2¼ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; close to the shore and the high-water mark at the south end of an accumulation of deadheads and washed-up limbs of trees. There is a small creek about 900 feet due east. Reference monument 75 is about 1,000 feet to the northwest.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 78** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—In section 21, township 161 north, range 31 west; on the left side of Rainy River, 3¼ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; on the south side of a small inlet 1,000 feet north of a large creek. The monument is close to the shore and above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 79** (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 52; on the right bank of Rainy River, 2½ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; on the west side of the mouth of a small creek due north of a large creek on the United States side; close to the shore and above the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 80 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 28, township 161 north, range 31 west; on the left side of Rainy River, 2¾ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario. It is opposite reference monument 77 and about 150 feet from the shore.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 81** (Ontario, Rainy River District; J. J. McArthur, 1913; reset by G. T. Prinsep, 1922).—In the Wild Lands Reserve, section 52; on the right side of Rainy River, 1¾ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; 300 feet southeast of the mouth of a small creek that is opposite the north end of the boom on the United States side. It is about 25 feet from the bank.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 82 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 28, township 161 north, range 31 west; on the left side of Rainy River, 2¼ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; on the west side of the mouth of a large creek just below the boom on the United States side. The monument is close to the shore and above the bank and about 300 feet from a group of farm buildings.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 83 (Ontario, Rainy River District; J. J. McArthur, 1913; 1917).—In the Wild Lands Reserve, section 53; on the right side of Rainy River, 1¼ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; on the southeast side of the mouth of a small creek opposite the south end of the boom on the United States side.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 84** (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1922).—In section 27, township 161 north, range 31 west; on the left side of Rainy River, 1<sup>3</sup>/<sub>4</sub> miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; one-third mile southeast of the mouth of a large creek and near

the north end of the boom; about 150 feet from the shore and a little more than halfway up the slope, near the ruins of an old mill.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 85 (Ontario, Rainy River District; J. J. McArthur, 1913; 1922).—In Atwood Township, section 33; on the right side of Rainy River, two-thirds mile northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; in the pine grove used as a picnic ground, just above the bank of the river and at the end of the road.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

Reference Monument 86 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—In section 27, township 161 north, range 31 west; on the left side of Rainy River, a little over a mile northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; about halfway between the bank and the W. D. & P. Railway siding which parallels the river. Reference monument 83, on the Canadian side of the river, is directly opposite.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 87** (Ontario, Rainy River District; Jesse Hill, 1914; 1925).—On the north bank of Rainy River opposite Baudette, Minn. The station is on the retaining wall of the northeast end of the Canadian National Railway bridge crossing Rainy River. It is about 3 meters southeast of the southeast rail of the track.

Station mark: A standard 8-inch manganese-bronze reference post set in the wall. A bronze disk is set in the retaining wall on the other side of the track 5.61 meters distant from the monument.

Reference Monument 88 (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1922).—In section 35, township 161 north, range 31 west; on the left side of Rainy River, one-half mile northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; 400 feet north of a small creek; above the bank and close to the shore.

Station mark: A wrought-iron post, about 12 inches high and 2 inches square, set in a square concrete base.

**Reference Monument 89** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1925).—On the south bank of Rainy River at Baudette, Minn. The station is on the retaining wall at the southwest end of the Canadian National Railway bridge crossing Rainy River. It is about 3 meters southeast of the southeast rail of the track.

Station mark: A standard 8-inch manganese-bronze reference post set in the wall. A bronze disk set in the retaining wall on the other side of the track is 6.08 meters distant from the monument. An aluminum disk marked "U.S. Geological Survey B. M. 1084" is set in the same retaining wall as the bronze disk and 0.3 meter distant from it.

**Reference Monument 90** (Ontario, Rainy River District; Jesse Hill, 1914; 1925).—On the north bank of Rainy River, at the foot of Fourth Street, in the town of Rainy River, Ontario. The station is about 6 meters west of the center of the street, 21 meters from the shore end of the pier, and 22 meters from the corner of the River View Hotel.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 1-inch iron rod set 4 feet in the ground, marking triangulation station "Pounder," which is also Department of Public Works triangulation station "H," is 1.84 meters east of the monument.

**Reference Monument 91** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, across from the east end of the town of Rainy River, Ontario. The station is about 8 meters above and 21 meters back from the river's edge, 26 meters northwest of the end of the rail of a footbridge across a creek, and about 76 meters east of the old Spooner saloon building.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Bachtel," is 0.66 meter north of the monument.

**Reference Monument 92** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about five-eighths mile east of Fourth Street in the town of Rainy River, Ontario. The station is about 3 meters above and 5 meters back from the river, 37 meters west of the pumping plant, 91 meters east of the old water tank, 9 meters southwest of Mr. Sage's house and in line with the west line of his lot.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. The monument has been covered by a fill so that the top just projects above the surface of the ground.

**Reference Monument 93** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1 mile southeast of the dock in the town of Rainy River, Ontario. The station is about 6 meters above and 8 meters back from the river and 3 meters from the top of the bank. It is southwest of the Canadian sorting boom and opposite the mouth of a slough.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 94** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1½ miles southeast of the town of Rainy River, Ontario. The station is about 130 meters southeast of a slough and 150 meters south of a house. It is about 480 meters northwest of the southeast corner of section 6, township 160 north, range 30 west, about 9 meters above and 30 meters back from the river's edge and 3 meters from the top of the bank.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 95** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 2 miles southeast of the town of Rainy River, Ontario. The station is about 61 meters from an old house and is between two fences, 7 meters west of one and 14 meters east of the other. It is 2 meters above and 8 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Level," is 0.81 meter southwest of the monument.

**Reference Monument 96** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 2½ miles east of the town of Rainy River, Ontario. The station is in a hayfield, about 90 meters west of a fence, about 250 meters west of the east line of section 8, township 160 north, range 30 west, about 200 meters east of a house, and about 2 meters above and 15 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A buried stone and ball of wire marking triangulation station "Derrick" are 9.49 meters south of the monument.

**Reference Monument 97** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 3 miles east of the town of Rainy River, Ontario. The station is on the edge of a grainfield opposite the upper end of the sheer boom to the Canadian side, and about 38 meters east of a fence. It is about 4 meters above and 6 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 98** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 3 miles west of Clementson, Minn., in a hayfield, 2 meters above and 15 meters back from the river's edge. A 24-inch elm tree is on the bank of the river, southwest 20 meters distant, and a large flat rock is north 4 meters distant from the station. The lumber company's boarding house on the south side of the river bears east-southeast about 700 meters from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 99 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 2% miles west of Clementson, Minn. The station is near the edge of a hayfield, about 1 meter back from the river bank, and is about 125 meters southeast of Walk's house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A ball of wire and a cross on a stone (both underground), marking triangulation station "Walk," are 28.96 meters distant from the monument in azimuth  $215^{\circ} 20'$ .

**Reference Monument 100** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1½ miles west of Clementson, Minn. The station is about 10 meters back from the river's edge, near the edge of an old driveway.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross in a stone over a buried ball of wire marks triangulation station "Solid," 5.52 meters north of the monument.

Reference Monument 101 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1¼ miles west of Clementson, Minn. The station is about 12 meters back from the river's edge at a point where the bank is irregular. There is a small swale about 15 meters west of the station and the old Ely house is 100 meters distant.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried ball of wire marks triangulation station "Buffy," 3.31 meters southwest of the monument.

Reference Monument 102 (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1 mile west of Clementson, Minn. The station is about 70 meters east of the end of a clearing, and is 8 meters above and 20 meters back from the river's edge. It is opposite the mouth of a small creek.

Station mark: A standard 8-inch manganese-bronze reference post set in concrete. A cross cut in a stone over a buried ball of wire marks triangulation station "Gus," 2.62 meters north-northwest of the monument.

**Reference Monument 103** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about five-eighths mile west of Clementson, Minn. The station is about 8 meters back from the river's edge, 130 meters east of a fence, and 75 meters southwest of an old hewed-timber house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried ball of wire, marking triangulation station "Pasture," is 6.80 meters southwest of the monument.

**Reference Monument 104** (Minnesota, Lake of the Woods County; Jesse Hill, 1914; 1921).—On the south bank of Rainy River, on the west side of the mouth of Rapid River. The station is about 1 meter above and 3 meters back from the river's edge, and about 45 meters east of the end of the small point of land.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete bass. A bronze disk set in concrete, marking triangulation station "Rapid," is 2.82 meters southwest of the monument.

Reference Monument 105 (Ontario, Rainy River District; Jesse Hill, 1914; 1921).—On the north shore of Rainy River, about 1½ miles northeast of Clementson, Minn. The station is in a hayfield, 9 meters above and 15 meters back from the river's edge, and about 5 meters from the edge of the bank. It is about 75 meters northeast of the mouth of Sleeman Creek. A 16-inch elm tree bears southwest 8 meters distant from the station. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 106** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1½ miles northeast of Clementson, Minn. The station is on a bend in the river 1 meter above and 3 meters back from the river's edge. It is about one sixth of a mile west of the Milne house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Milne," is 2.17 meters north of the monument.

Reference Monument 107 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1¾ miles northeast of Clementson, Minn. The station is about 24 meters back from the river's edge and 9 meters east of a swale. It is near the edge of a hayfield and is about 75 meters west of a north-and-south road.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried ball of wire, marking triangulation station "Kearney," is 16.93 meters north of the monument.

**Reference Monument 108** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 2¼ miles east of Clementson, Minn. The station is near the edge of the river bank about 125 meters east of the mouth of Hanson Creek.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 109** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 2¾ miles east of Clemenston, Minn., about 75 meters east of the range line, and about midway between Bunting and Budrow Creeks. The station is on a bench about 5 meters above and 13 meters back from the river's edge. It is 2 meters south of a fence, about 38 meters south of Lipkie's barn, and back of a boathouse.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Lipkie," is 0.94 meter south of the monument.

Reference Monument 110 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 3 miles east of Clementson, Minn. The station is about 10 meters above and 25 meters back from the river's edge, about 15 meters southeast of a small building and about 50 meters east of Robinson's house.

Station mark: A standard 8-inch manganese, bronze reference post set in concrete. A bronze disk set in a concrete base, marking triangulation station "Robinson," is 24.40 meters north-northwest of the monument.

**Reference Monument 111** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 3 miles west of Pinewood, Ontario. The station is about 8 meters above and 9 meters back from the river's edge and about 150 meters west of the mouth of a creek. It is about 60 meters west by north of an old house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 112** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 2¾ miles west of Pinewood, Ontario. The station is on top of the bank about 6 meters above and 11 meters back from the river's edge. It is about 2 meters west of a fence and 6 meters northwest of a 20-inch leaning pine tree. A north-and-south section-line road comes down to the river at this point.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 113** (Ontario, Rainy River District; Jesse Hill, 1914; 1921).—On the north bank of Rainy River, about 2¼ miles west of Pinewood, Ontario, and three-fourths of a mile northwest of Central, Minn. The station is on a slope of the bank about 2 meters above and 8 meters back from the river's edge, and about 60 meters south of Smart's house. The piling of an old pier is about 28 meters west of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 114 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about one-third mile west of Central, Minn. The station is at the end of a north-and-south section-line road between sections 2 and 3, township 160 north, range 29 west; about 4 meters east of a fence, and about 11 meters above and 30 meters back from the river's edge. It is about 18 meters northwest of the corner of a schoolhouse.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 115 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).-On the south bank of Rainy River, about one-third mile east of Central, Minn., and about 11/4 miles west-southwest of Pinewood, Ontario. The station is on a slope of the bank about 6 meters above and 30 meters back from the river's edge. It is just south of a trail and about 40 meters east-northeast of Tellner's house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 116 (Ontario, Rainy River District; Jesse Hill, 1914; 1918) .- On the north bank of Rainy River, on the east side of the mouth of Pine Creek, and about 200 meters west of the Pinewood, Ontario, Catholic Church. The station is about 4 meters above and about 6 meters back from the river's edge. It is about 27 meters east of a fence.

Station mark: A standard 8-inch manganese-bronze reference post set in concrete. A 3/4-inch iron rod, marking triangulation station "Pine" (Laplace station "E" of the Department of Public Works of Canada), is 1.64 meters south of the monument. A post 4 inches by 4 inches and 2 feet high marked " $\triangle G$ " serves as a reference to the triangulation station.

Reference Monument 117 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).-On the south bank of Rainy River, about three-eighths mile southeast of Pinewood, Ontario. The station is about 10 meters above and 40 meters back from the river's edge. It is just outside the fence on Johnson's property and about 28 meters northeast of a barn.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "John," is 4.53 meters southwest of the monument.

Reference Monument 118 (Ontario, Rainy River District; Jesse Hill, 1914; 1918) .- On the north bank of Rainy River, about 1 mile east of Pinewood, Ontario. The station is about 5 meters above and 6 meters back from the river's edge and about 8 meters west of the center of a small washout or creek.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 119 (Minnesota, Koochiching County; Jesse Hill, 1918; 1921).-On the south bank of Rainy River, about 1¼ miles east of Pinewood, Ontario, and about 300 meters east of the mouth of Whitefish Creek. The station is above the boat landing for Border, Minn., about 4 meters back from the top of the bank. It is about three-fourths meter east of a north-and-south fence opposite a post with a nail in it.

Station mark: A standard 8-inch manganese-bronze reference post set in concrete.

Reference Monument 120 (Ontario, Rainy River District; Jesse Hill, 1914; 1921).-On the north shore of Rainy River, about 1¾ miles east of Pinewood, Ontario. The station is about 2 meters above and 5 meters back from the river's edge, in a pasture. It is about 40 meters east of the mouth of a creek.

Station mark: A standard 8-inch manganese-bronze reference post set in concrete.

Reference Monument 121 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south shore of Rainy River, about 2 miles southeast of Pinewood, Ontario. The station is on Kavanaghs Point, about 30 meters east of Kavanagh's house. It is about 9 meters above and 18 meters back from the river's edge. Station mark: A standard 8-inch manganese-bronze reference post set in concrete.

Reference Monument 122 (Ontario, Rainy River District; Jesse Hill, 1914; 1918). - On the east bank of Rainy River, about 1% miles north of the Frontier (Minn.) schoolhouse. The station is between two fields on Craigen's property, and near the summit of the ridge between the river and a creek. It is just west of a small graveyard.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Craigen," is 6.46 meters northeast of the monument.

Reference Monument 123 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 11/2 miles north of the Frontier (Minn.) schoolhouse. The station is at the edge of a hay field on a slope of the bank, about 9 meters above and 15 meters back from the river's edge. It is about one-fourth mile south of Svenson's house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 124 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about 1 mile north of the Frontier (Minn.) schoolhouse and about 150 meters south of the mouth of Clement Creek. The station is about 15 meters northwest from the northwest corner of Pearson's house and about 5 meters above and 9 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Pearson," is 1.32 meters east of the monument.

Reference Monument 125 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about five-eighths mile northeast of the Frontier (Minn.) schoolhouse. The station is about 9 meters above and 21 meters back from the river's edge. It is about 2 meters below the top of the bank and 3 meters from the edge of a field. A log house bears north-northeast about 100 meters from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

96030-31-25

**Reference Monument 126** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 125 meters east of the Frontier (Minn.) schoolhouse. The station is on a slope of the bank about 4 meters above and 9 meters back from the river's edge and about 80 meters south of the section line.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Cut," is 1.69 meters northeast of the monument.

Reference Monument 127 (Ontario, Rainy River District; Jesse Hill, 1914; 1921).—On the east bank of Rainy River, about one-half mile north of the Frontier (Minn.) store. The station is on a gravel ridge sloping toward the river, about 20 meters southwest from an old log house. It is about 8 meters above and 18 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 128 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 350 meters northwest of the Frontier (Minn.) store. The station is on the bank about 6 meters above and 12 meters back from the river's edge, and about 9 meters southeast of a small creek bed. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 129** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 40 meters east of the Frontier (Minn.) store. The station is about 4 meters above and 6 meters back from the river's edge, in the edge of a garden.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 130 (Ontario, Rainy River District; Jesse Hill, 1914; 1921).—On the north bank of Rainy River, about one-half mile east of the Frontier (Minn.) store. The station is in a field near the west corner, about 4 meters from the southwest side and 24 meters from the northwest side. It is about 3 meters above and 12 meters back from the water's edge. A building is about 80 meters north-northwest from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 131** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1 mile southeast of the Frontier (Minn.) store. The station is about 8 meters above the water, and is just east of the mouth of a small creek.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 132** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1¼ miles east of the Frontier (Minn.) store. The station is about 1 meter above and 6 meters back from the river's edge. It is about 200 meters east of an old pier and 40 meters west of a fence.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Meadow," is 4.57 meters southwest of the monument.

**Reference Monument 133** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1% miles east of the Frontier (Minn.) store, and about 200 meters west of the mouth of a small creek. The station is about 14 meters above and 18 meters back from the river's edge. It is just east of a half-moon bay and near a cow trail.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Clear" is 8.60 meters northwest of the monument.

**Reference Monument 134** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 2¼ miles east of the Frontier (Minn.) store. The station is on a slope of the bank about 6 meters above and 9 meters back from the river's edge. A small shack bears northeast about 60 meters from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 135 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 2% miles east of the Frontier (Minn.) store. The station is about 8 meters above and 18 meters back from the river's edge. Cameron's house bears east-northeast across the river from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 136** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1¼ miles west of the Boucherville (Ontario) post office. The station is on the west side of a swale about 150 meters west of the mouth of Cameron Creek at the point where the road turns and leaves the river. It is about 6 meters above and 9 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 137 (Minnesota, Koochiching County; Jesse Hill, 1914; 1921).—On the south bank of Rainy River, about one-fourth mile southwest of the Boucherville (Ontario) post office. The station is about 7 meters above and 15 meters back from the river's edge, about 60 meters east of Bilyew's house, and about 50 meters east of the section line.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Bilyew," is 11.65 meters southeast of the monument.

**Reference Monument 138** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about one-third mile east of the Boucherville (Ontario) post office and about 70 meters east of Del Vipont's log cabin. The station is about 4 meters above and 5 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Del," is 2.19 meters south of the monument.

**Reference Monument 139** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about five-eighths mile southeast of the Boucherville (Ontario) post office and about one-fifth mile southwest of the west end of an island in the river. The station is on the point of land between the river and the west side of a small creek. It is about 2 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 140** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east end of a large island in Rainy River, about 1 mile east of the Boucherville (Ontario) post office. The station is about 7 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a ball of wire, marking triangulation station "Isle," is 39.79 meters east of the monument.

**Reference Monument 141** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1% miles west of Birchdale Landing, Minn. The station is near the east end of a flat point and is about 3 meters above and 7 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Curve," is 1.24 meters north of the monument.

**Reference Monument 142** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1 mile west of Birchdale Landing, Minn. The station is about 2 meters above and 6 meters back from the river's edge, on a flat point. A leaning poplar tree with a small notch is about 4 meters southwest of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in concrete. A cross cut in a stone over a buried bottle, marking triangulation station "Storm," is 4.20 meters south of the monument.

**Reference Monument 143** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about three-fourths mile west of Birchdale Landing, Minn., on a rounded projection of the river bank. The station is about 6 meters above and 11 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in an 8-inch stone over a ball of wire, marking triangulation station "Break," is 8.36 meters north of the monument.

**Reference Monument 144** (Minnesota, Koochiching County; Jesse Hill, 1914; 1921).—On the south bank of Rainy River, about one-half mile west of Birchdale Landing, Minn. The station is on a rock point projecting into the river, about 160 meters east of the mouth of a small creek.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock, marking triangulation station "Howard," is 0.20 meter north of the monument.

**Reference Monument 145** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, opposite Birchdale Landing, Minn. The station is in the timber about 2 meters above and 10 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross on a stone over a buried bottle, marking triangulation station "Parson," is 9.11 meters south of the monument.

Reference Monument 146 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about one-half mile east of Birchdale Landing, Minn. The station is about 10 meters above and 30 meters back from the river's edge, and is opposite an island about 150 meters long near the Canadian shore.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Cave," is 19.11 meters north of the monument.

Reference Monument 147 (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the north bank of Rainy River, about three-fourths mile east of Birchdale Landing, Minn. The station is on a high bank about 9 meters above and 9 meters back from the river's edge. It is in a fence line and is about 30 meters south of an old Indian house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 148** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1 mile east of Birchdale Landing, Minn. The station is on a rock point, about 2 meters above and 9 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone, marking triangulation station "Lean," is 9.35 meters northeast of the monument.

## APPENDIX V

Reference Monument 149 (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the north bank of Rainy River, about 1½ miles east of Birchdale Landing, Minn. The station is on a grassy point, about 2 meters above and 9 meters back from the river's edge. It is about 60 meters east of a small prominent point. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 150 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1½ miles east of Birchdale Landing, Minn., and one-half mile below the head of Long Sault Rapids. The station is on a rock ledge just west of the west end of an island about 140 meters long near the United States shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A cross cut in the rock, marking triangulation station "Tom," is 0.71 meter northwest of the monument.

**Reference Monument 151** (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the north bank of Rainy River, about two-fifths mile below the head of Long Sault Rapids. The station is in a field about 3 meters from a fence line and about 1 meter above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 152 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about one-third mile below the head of Long Sault Rapids. The station is on a point just east of a small island and about 6 meters from the river's edge. A large rock is in the water just out from the station. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A buried bottle,

marking triangulation station "Muck," is 2.03 meters northeast of the monument.

**Reference Monument 153** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River at the head of Long Sault Rapids. The station is on top of a plateau about 23 meters above and 18 meters back from the river's edge. It is in a cleared grassy place, in which are a number of outcropping bowlders. A path from the river above the rapids passes near the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk cemented in an outcropping rock, marking triangulation station "Right," is 2.05 meters south of the monument.

Reference Monument 154 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River at the head of Long Sault Rapids. The station is on a rocky point about 1 meter above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A cross cut in a flat rock surrounded by a small pile of stones, marking triangulation station "Left," is 5.40 meters northeast of the monument.

Reference Monument 155 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about one-fourth mile east of the head of Long Sault Rapids and about 45 meters west of the mouth of a small creek. The station is about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a gray granite bowlder, marking triangulation station "Dog," is 7.60 meters south of the monument.

**Reference Monument 156** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River about one-third mile east of the head of Long Sault Rapids, and across the river slightly east of south of the mouth of a small creek. The station is about 2 meters above the water, near the edge of the brush.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Cat," is 6.02 meters north-northwest from the monument.

**Reference Monument 157** (Ontario, Rainy River District; Jesse Hill, 1918).—On the north bank of Rainy River, about one-half mile east of the head of Long Sault Rapids and on the first point above the rapids. The station is below a rocky bluff, about 2 meters above and 9 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk cemented in a round-topped rock, marking triangulation station "Colt," is 4.78 meters southeast from the monument.

**Reference Monument 158** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about three-fourths mile east of the head of Long Sault Rapids and nearly opposite the mouth of Sturgeon River. The station is near the timber line and about 2 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Ogren," is 6.29 meters north of the monument.

**Reference Monument 159** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1 mile east of the head of Long Sault Rapids, about three-eighths mile east of the mouth of Sturgeon River, and about 75 meters west of the east line of the Indian reservation. The station is near some leaning birch trees and is about 4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Plumb," is 11.68 meters southwest from the monument.

**Reference Monument 160** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1½ miles east of the head of Long Sault Rapids on a farm belonging to Theodor Olsen. The station is on a grassy slope, about 6 meters above high-water mark, and is about 60 meters east of the mouth of a small creek. It is about 125 meters northeast of Olsen's house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Olsen," is 14.13 meters north of the monument.

**Reference Monument 161** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River about 1½ miles east of the head of Long Sault Rapids and about one-third mile east of the eastern limit of the old Indian reserve. The station is about 7 meters above and 17 meters back from high-water line. It is about 5 meters east of an old fence.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Pistol," is 16.78 meters south of the monument.

**Reference Monument 162** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1 mile west of Barwick, Ontario, and about 100 meters west of the mouth of a small creek. The station is about 10 meters above the river, on the property of D. Smith. It is about 1 meter from the southwest corner of Smith's first pole fence and about 50 meters southwest of his house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Square," is 0.74 meter north of the monument.

**Reference Monument 163** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about three-fourths mile west of Barwick, Ontario, on the property of Mr. Hanson. The station is about 4 meters above the river and is about 3 meters from the northeast corner of Hanson's barn.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in a concrete block 1 foot square, marking triangulation station "Hansen," is 1.49 meters north of the monument.

**Reference Monument 164** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about one-fourth mile west of Barwick, Ontario, and opposite the west end of a long sandy island. The station is about 6 meters above the water and about 15 meters south of a house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. Triangulation station "Hartley," is 2.67 meters south of the monument.

Reference Monument 165 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, in front of the Manitou (Minn.) post office. The station is about 40 meters east of the ferry landing and about 5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone about 20 by 36 inches, marking triangulation station "Office," is 20.59 meters northeast of the monument.

**Reference Monument 166** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about one-half mile east of Barwick, Ontario. The station is in front of a frame house and is about 6 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk cemented in rock, marking triangulation station "Watts," is 1.14 meters south of the monument.

**Reference Monument 167** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about five-eighths mile east of the Manitou (Minn.) post office and about 225 meters east of a north-and-south section-line road. The station is about 3 meters above and 13 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a round-topped rock, marking triangulation station "Wick," is 12.28 meters north of the monument.

**Reference Monument 168** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1½ miles east of Barwick, Ontario. The station is about 60 meters east of the section-line road, about 40 meters southeast of a log building and near the south edge of a road along the river. It is about 8 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A cross cut in a granite outcrop near a large black rock, marking triangulation station "Fern," is 39.44 meters southwest of the monument.

**Reference Monument 169** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 1 mile east of the Manitou (Minn.) post office, and about one-fourth mile west of the mouth of Burton Creek. The station is about 8 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Lock," is 34.37 meters north of the monument.

**Reference Monument 170** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1½ miles east of Barwick, Ontario, and about 150 meters east of the mouth of Sims Creek. The station is about 8 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Beaver," is 20.12 meters south of the monument.

**Reference Monument 171** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the United States shore of Rainy River, about 1% miles east of the Manitou (Minn.) post office and about 325 meters east of the mouth of Burton Creek. The station is about 10 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Know," is 31.96 meters northeast of the monument.

**Reference Monument 172** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about three-fourths mile west of Manitou Rapids. The station is about 90 meters west of the west end of a long island and is about 1 meter above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 173** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about three-fourths mile west of Manitou Rapids and opposite the middle of a long island near the Canadian shore. The station is about 2 meters above the water level and is about 18 meters west of J. Lewis's boat landing.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in concrete, marking triangulation station "Lewis," is 7.47 meters north-northwest from the monument.

**Reference Monument 174** (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the north bank of Rainy River, about 200 meters below the lower end of Manitou Rapids. The station is on the bank about 2 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 175** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, in a little cove just below Manitou Rapids. The station is about 2 meters above high-water mark.

Station mark: A standard 8-inch manganese bronze reference post set in a concrete base. A cross cut in a large rock below the high-water level, marking triangulation station "Over," is 13.84 meters north of the monument.

**Reference Monument 176** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River near the middle of Manitou Rapids. The station is on a rocky flat and about 0.6 meter above the water. A pile of rocks has been built around the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock, marking triangulation station "Canoe," is 0.08 meter from the monument.

**Reference Monument 177** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, at the head of Manitou Rapids. The station is about 12 meters above and about 25 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze post set in a concrete base. A cross cut in a stone, marking triangulation station "Rapid," is 3.79 meters west of the monument.

**Reference Monument 178** (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the north bank of Rainy River, about three-eighths mile east of the head of Manitou Rapids and about 45 meters west of the mouth of Bear Creek. The station is about 6 meters above the water, in a hayfield, just inside the fence.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 179** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the Canadian shore of Rainy River, about 1 mile east of Manitou Rapids and opposite a long narrow island near the United States shore. The station is about 8 meters above and about 25 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a rock, marking triangulation station "Flat," is 25.68 meters south of the monument.

**Reference Monument 180** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about 1 mile west of the Indus (Minn.) school. The station is about 6 meters above and 14 meters back from the river's edge, on a grassy bank. It is about 45 meters west of the heavy timber growth.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in a concrete block 1 foot square, marking triangulation station "Spring," is 13.57 meters south of the monument,

Reference Monument 181 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about seven-eighths mile west of the Indus (Minn.) school and about 120 meters east of the mouth of

a small stream. The station is about 3 meters above and about 12 meters back from the river's edge, and is about 18 meters west of a fence.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "George," is 12.26 meters north-northwest of the monument.

**Reference Monument 182** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, about three-eighths mile northwest of the Indus (Minn.) school. The station is in front of Benjamin Wilcox's house and is about 9 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut on a flat rock nearly level with the ground, marking triangulation station "Shut," is 30.70 meters south of the monument.

**Reference Monument 183** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 300 meters east of the Indus (Minn.) school. The station is in front of Mr. Sunderson's house and is about 2 meters above and about 13 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Sunder," is 13.35 meters north of the monument.

**Reference Monument 184** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River in the western part of Emo, Ontario. The station is about 10 meters above the river and about 13 meters back of the Canadian National Railway pump house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk cemented in rock, marking triangulation station "Emo west base," is 1.49 meters northeast from the monument.

Reference Monument 185 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River at Indus, Minn. The station is about 4 meters above and 12 meters back from the river's edge and about 4 meters back from the top of the bank. It is about 14 meters west of the board walk to the boat landing. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 186** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about one-half mile southeast of the hotel in Emo, Ontario. The station is about 9 meters above and 45 meters back from the river's edge. It is near Fred Cruikshank's front fence and about 65 meters from his house.

Station mark: A standard 8-inch manganese-bronze reference post set in concrete. A 2-inch bronze disk set in a concrete block 1 foot square, marking triangulation station "Crook," is 1.12 meters east of the monument.

**Reference Monument 187** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the cast bank of Rainy River, about 1 mile southeast of the Emo (Ontario) hotel and about 275 meters northeast of the north end of Smoot Island. The station is on a high bank about 7 meters above the water. It is on the property of Thomas Boucher about 85 meters south of his pig house and about 150 meters southwest of his barn.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk set in a concrete block, marking triangulation station "Boucher," is 2.01 meters west from the monument.

**Reference Monument 188** (Minnesota, Koochiching County; Jesse Hill, 1918).—On the southern end of Smoot Island in Rainy River, about 1¼ miles above the Emo (Ontario) hotel. The station is about 2 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

**Reference Monument 189** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 1½ miles south of the Emo (Ontario) hotel and about one-fourth mile south of Smoot Island. The station is about 3 meters above and 12 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a rock, marking triangulation station "Vega," is 12.00 meters east of the monument.

**Reference Monument 190** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 2 miles south of the Emo (Ontario) hotel and about midway between Smoot Island and Conmee Island. The station is in front of Joseph McComb's house and is about 10 meters above and 31 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in an outcropping rock, marking triangulation station "McComb," is at the river's edge 31.07 meters east of the monument.

**Reference Monument 191** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about 2% miles south of the Emo (Ontario) hotel, about three-eighths mile north of Conmee Island, and about 125 meters north of the mouth of a small stream. The station is about 8 meters above and 23 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a large rock near the river's edge, marking triangulation station "Boat," is 23.02 meters west of the monument.

Reference Monument.192 (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On Conmee Island in Rainy River, about 3½ miles south of the Emo (Ontario) hotel. The station is about 325 meters north of the south end of the island and about 45 meters east of the west shore. It is about 7 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 193 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 3% miles south of the Emo (Ontario) store and about one-half mile south of the south end of Conmee Island. The station is on the property of Mr. Marceau, about 7 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 194 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about 4½ miles south of the Emo (Ontario) store and about 200 meters north of the mouth of Locking Creek. The station is about 10 meters above and 25 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a rock about 0.6 by 1 meter in size, at the river's edge, marking triangulation station "Uncle," is 25.34 meters west of the monument.

Reference Monument 195 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 1¼ miles north of the Aylesworth, Ontario, post office. The station is about 8 meters above and 40 meters back from the river's edge, on the property of Mr. La Point, and about 65 meters north of the woods.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Francois," is near the river's edge, 39.93 meters east of the monument.

Reference Monument 196 (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the east bank of Rainy River, about three-fourths mile north of the Aylesworth (Ontario) post office. The station is about 1 meter above the river and about 3 meters north of a large white birch tree, in a pasture.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 197** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about 260 meters north of the Aylesworth (Ontario) post office. The station is near the edge of a steep bank about 7 meters above and 15 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Swan," is 9.96 meters north-northwest of the monument.

**Reference Monument 198** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the Canadian shore of Rainy River, about 200 meters south of the Aylesworth (Ontario) post office. The station is near the edge of the steep bank about 9 meters above and 30 meters back from the river's edge. It is near the west side of a farm road, about 110 meters south of an east-and-west section-line road to the river.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Linquist," is 1.14 meters southwest of the monument.

Reference Monument 199 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about three-eighths mile south of the Aylesworth (Ontario) post office. The station is about 5 meters above the water and near an old dock on Mr. Degraw's property. It is just north of the line between townships 158 and 159 north.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A nail in a timber of the old dock, marking triangulation station "Degraw," is 10.38 meters east of the monument.

Reference Monument 200 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the east bank of Rainy River, about 570 meters north of the Loman (Minn.) school. The station is about 8 meters above and 25 meters back from the river. It is on W. B. Ogden's property, about 75 meters southwest from his house and about 15 meters from his chicken house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross in a stone over a buried bottle, marking triangulation station "Tip," is 1.20 meters west from the monument.

Reference Monument 201 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the west bank of Rainy River, about 50 meters northeast of the Loman (Minn.) school. The station is about 7 meters above and about 10 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "School," is 0.93 meter west of the monument.

**Reference Monument 202** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about three-fourths mile northwest of the mouth of Black River at Loman, Minn. The station is about 8 meters above and 30 meters back from the river's edge and about 1 meter north of a pasture fence.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "McIntosh," is 1.59 meters north of the monument.

Reference Monument 203 (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River opposite the house of Mack Loman at Loman, Minn., and north and opposite the mouth of Black River. The station is about 2 meters above and about 6 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Shore," is 4.92 meters south from the monument.

**Reference Monument 204** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River, about 135 meters east of the mouth of Black River at Loman, Minn. The station is on top of the bank, facing the railroad and the river, on Henry Metcalf's property, about 95 meters east of his house and 35 meters west of his barn. It is about 8 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a block of concrete about 1 foot square, marking triangulation station "Metcalf," is 1.57 meters north of the monument.

**Reference Monument 205** (Ontario, Rainy River District; Jesse Hill, 1914; 1918).—On the north bank of Rainy River, opposite and about 200 meters upriver from the hoisting plant at Loman Station, Minn. The monument is on a high bank about 5 meters above and 20 meters back from the river's edge. It is near a path parallel to the river and about 40 meters west of the mouth of a small stream.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Tepee," is 4.01 meters southwest from the monument.

**Reference Monument 206** (Ontario) Rainy River District; Jesse Hill, 1914; 1918).—On the Canadian shore of Rainy River, about seven-eighths mile east of the mouth of Black River at Loman, Minn., and about 320 meters east of the mouth of a small creek. The station is on a grassy slope on the property of Mr. Armstrong, about 7 meters above and 25 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Armstrong," is 16.31 meters southeast of the monument.

Reference Monument 207 (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On Watrous Island in Rainy River, about 1¼ miles east of the mouth of Black River at Loman, Minn. The station is near the west end of the island, about 4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a flat-topped rock at the water's edge, marking triangulation station "Simp," is 21.51 meters west-northwest of the monument.

**Reference Monument 208** (Ontario, Rainy River District; Jesse Hill 1914; 1918).—On the north bank of Rainy River, about 1½ miles west of the mouth of Big Fork River and about 40 meters west of the mouth of Turner Creek. The station is about 7 meters above and 20 meters back from the river's edge, on the west side of a gully.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Clark," is 3.59 meters south of the monument.

**Reference Monument 209** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about three-fourths mile west of the mouth of Big Fork River. The station is about 5 meters above and 15 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block 10 by 12 inches, marking triangulation station "High," is 5.29 meters north of the monument.

**Reference Monument 210** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, opposite the mouth of Big Fork River. The station is about 8 meters above the water and 3 meters from the edge of the bank, near a line fence.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone 6 or 8 inches in diameter, marking triangulation station "Fence," is 2.56 meters southeast of the monument.

**Reference Monument 211** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about one-fourth mile east of the mouth of Big Fork River. The station is about 4 meters above and 11 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 212** (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about 1 mile west of Big Fork, Ontario, and 1 mile east of the mouth of Big Fork River. The station is at the southwest corner of the section-line road running north. It is about 9 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 213** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the United States shore of Rainy River, about 1½ miles east of the mouth of Big Fork River, about 1 mile west of Big Fork, Ontario, and about one-half mile east of the Laurel (Minn.) wharf. The station is about 9 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a large rock just above high water, marking triangulation station "Fred," is 27.36 meters north of the monument.

**Reference Monument 214** (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the south bank of Rainy River, across and a little down river from Big Fork, Ontario. The station is on the property of Fred Smith, on the east edge of a grass field, just west of a small stream. It is about 9 meters above and 45 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 215** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about five-eighths mile east of Big Fork, Ontario. The station is on the property of Alonzo Spencer in a field near the high bank. It is about 9 meters above and 30 meters back from the river's edge. Several poplar trees are near the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Spencer," is 2.21 meters south of the monument.

**Reference Monument 216** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 1¼ miles east of Big Fork, Ontario, and about 60 meters west of the mouth of a small stream. The station is about 9 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in concrete, marking triangulation station "Burnt," is 3.11 meters north-northeast of the monument.

**Reference Monument 217** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about 1½ miles east of Big Fork, Ontario, and one-half mile southwest of the mouth of La Vallee River. The station is near the south edge of a field and about 110 meters southwest of the mouth of a small stream. It is about 10 meters above and 15 meters back from the river's edge. A very large pine tree is about 15 meters west of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Dun," is 1.51 meters south of the monument and 13.8 meters east of the pine tree.

**Reference Monument 218** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 330 meters east of the mouth of La Vallee River. The station is in a large meadow about midway between the woods and a clearing in which is an abandoned lumber camp. It is near the edge of the bank about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Plain," is 1.58 meters north of the monument.

**Reference Monument 219** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about one-half mile northeast of the mouth of La Vallee River. The station is on the south side of a road about 40 meters west of its junction at the section corner with a north and south road. It is about 10 meters above and 25 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Ward," is 17.42 meters south from the monument.

**Reference Monument 220** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about one-half mile east of the mouth of La Vallee River and on the upriver side of the big bend in Rainy River. The station is in the timber across the river from George Ward's house. It is about 5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Point," is 3.46 meters north-northeast of the monument.

**Reference Monument 221** (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about 1½ miles downstream from the mouth of Little Fork River and about 320 meters southeast

from the mouth of a small and crooked stream. The station is in a grain field near the river bank, about 2 meters above the water. Several elm trees are near the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 222** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 1¼ miles downstream from the mouth of Little Fork River and about 260 meters downstream from the line between ranges 25 and 26 west. The station is in the timber, about 11 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Move," is 21.45 meters north of the monument.

**Reference Monument 223** (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about seven-eighths mile downstream from the mouth of Little Fork River and about 470 meters east of the west line of an Indian reservation. The station is about 125 meters east of Peter Spence's house and about 4 meters above and 15 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Peter," is 13.64 meters south of the monument.

**Reference Monument 224** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about three-fourths mile downstream from the mouth of Little Fork River. The station is about 2 meters above and 9 meters back from the river's edge, near the bushes.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle below high water, marking triangulation station "Cass," is 8.67 meters north-northeast of the monument.

**Reference Monument 225** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about 330 meters downstream from the mouth of Little Fork River. The station is on a high bank about 10 meters above and 30 meters back from the river's edge. It is about 40 meters southwest of a house.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in concrete, marking triangulation station "Indian," is 1.36 meters south of the monument.

**Reference Monument 226** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River opposite the west end of a small sandy island lying off the mouth of Little Fork River. The station is on the bank near the bushes, about 4 meters above and 10 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Little," is 13.50 meters east-northeast of the monument.

**Reference Monument 227** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 500 meters east of the mouth of Little Fork River. The station is in William Watrous's front pasture about 200 meters east of his house. It is on a high bank about 9 meters above and 15 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in concrete, marking triangulation station "Watrous," is 1.08 meters north of the monument.

**Reference Monument 228** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about seven-eighths mile east of the mouth of Little Fork River and about 150 meters east of the mouth of a small creek. The station is in the southeast corner of A. Bowen's front yard, about 20 meters southeast of his house. It is about 7 meters above and 10 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block, marking triangulation station "Bowen," is 0.56 meter north of the monument.

**Reference Monument 229** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about 1½ miles east of the mouth of Little Fork River and about 350 meters west of the mouth of Watson Creek. The station is in a grove of elm trees on the property of W. H. Conner. It is about 3 meters above and 10 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Grove," is 3.66 meters southwest of the monument.

**Reference Monument 230** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 2 miles east of the mouth of Little Fork River and about 220 meters east of the line between sections 27 and 28, Township 70 north, range 25 West. The station is about 12 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Axe," is 28.15 meters north of the monument.

**Reference Monument 231** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about five-eighths mile west of Isherwood, Ontario. The station is about 7 meters above and 25 meters back from the river's edge at a point about 100 meters west of the mouth of a small creek.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a large solid rock at the river's edge, marking triangulation station "Saw," is 26.20 meters northwest of the monument.

**Reference Monument 232** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River at Isherwood, Ontario. The station is on the property of Mr. Isherwood, the postmaster, east across a deep gully from his house. It is about 9 meters above and 50 meters back from the river's edge. The entrance from the gully to a field is just south of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Isherwood," is 0.84 meter east of the monument.

Reference Monument 233 (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about one-half mile east of Isherwood, Ontario. The station is about 9 meters above and 30 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Small," is 20.01 meters north of the monument.

**Reference Monument 234** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the Canadian shore of Rainy River, about 1½ miles east of Isherwood, Ontario, and about 500 meters east of the mouth of Bartley Creek. The station is about 3 meters above and 8 meters back from the river's edge. The ruins of an old house are about 70 meters northwest of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Beach," is 7.34 meters south of the monument.

**Reference Monument 235** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 1¼ miles east of Isherwood, Ontario. The station is in the woods about 130 meters east of the mouth of a small creek and about 8 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Twig," is 18.80 meters north of the monument.

Reference Monument 236 (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about 1¾ miles east of Isherwood, Ontario. The station is about 20 meters west of an old abandoned pier and about 110 meters west of the mouth of a small creek. It is about 8 meters above and 20 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 237** (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about 6½ miles downstream from the dam at Fort Frances, Ontario. The station is about 250 meters southeast of the angle where the river road turns from the south to the west. It is at the southwest edge of a small timber tract owned by Alfred Wilson and is about 8 meters above and 25 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 238** (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the east bank of Rainy River, about 6¼ miles downstream from the dam at International Falls, Minn., and about 130 meters west and 40 meters south of the northwest corner of section 20, township 70 north, range 24 west. The station is on a point about 30 meters west of a small bight. It is about 1 meter above and 8 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Berry," is 8.34 meters northeast of the monument.

**Reference Monument 239** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the east bank of Rainy River, about 6 miles downstream from the dam at International Falls, Minn., and about 340 meters northeast of the southwest corner of section 17, Township 70 north, range 24 west. The station is in a clearing about 11 meters above and 40 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried square plug, marking triangulation station "Rasp," is 13.41 meters west of the monument.

**Reference Monument 240** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the west bank of Rainy River, about 5¼ miles downstream from the dam at Fort Frances, Ontario, and about 80 meters south of the mouth of a small creek. The station is on the property of William Wilson about 50 meters from his house. It is about 8 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Wilson," is 2.51 meters northeast of the monument.

**Reference Monument 241** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the east bank of Rainy River, about 55% miles downstream from the dam at International Falls, Minn., and about 80 meters south of the mouth of a creek. The station is about 500 meters south of the north line of section 17, township 70 north, range 25 west, about 6 meters above and 15 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Bush," is 13.56 meters west of the monument.

**Reference Monument 242** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the west bank of Rainy River, about 5½ miles downstream from the dam at Fort Frances, Ontario, about 400 meters south of the mouth of a small creek and about 600 meters north of the township line. The station is about 125 meters south of the woods and about 10 meters above and 35 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Hole," is 26.13 meters east-southeast of the monument

**Reference Monument 243** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the east bank of Rainy River, about 4% miles downstream from the dam at International Falls, Minn., and about 340 meters south of the north line of section 8, township 70 north, range 24 west. The station is on an open grassy slope on the property of John Henry, about 3 meters above and 5 meters back from the river's edge. There are several elm trees to the east of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A 2-inch bronze disk set in a concrete block about 1 foot square, marking triangulation station "Open," is 4.23 meters west of the monument.

**Reference Monument 244** (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the west bank of Rainy River, about 3½ miles downstream from the dam at Fort Frances, Ontario, and about one-fourth mile below the big bend where the river turns from a westerly to a southerly course. The station is about 10 meters east of the center of the road paralleling the river and about 100 meters south of the forks of the road. It is on the property of Joseph Bone, across the road and 28 meters distant from his house. It is about 15 meters above and 75 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 245** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the island in the big bend of Rainy River, 3% miles downstream from the dam at Fort Frances, Ontario. The station is on the highest point of the island, about 1 meter above and 5 meters north of the south shore.

Station mark: A standard 8-inch manganese-bronze reference post set in solid rock. A 2-inch bronze disk set in the rock and marking triangulation station "Third," is 0.16 meter north of the monument.

**Reference Monument 246** (Minnesota, Koochiching County; Jesse Hill, 1914; 1918).—On the south bank of Rainy River in the big bend of the river, 3 miles downstream from the dam at International Falls, Minn. The station is about 80 meters west and 20 meters south of the northwest corner of section 5, township 70 north, range 24 west, and about 240 meters northeast of the rocky island lying in the bend of the river. It is about 8 meters above and 30 meters back from the edge of the river.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a buried bottle, marking triangulation station "Short," (E. R. Martin, 1913; 1914), is 18.16 meters north of the station.

**Reference Monument 247** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about 2¾ miles downstream from the dam at Fort Frances, Ontario; about one-fourth mile east of the mouth of a small stream; and about one-fourth mile west of the range line. The station is about 3 meters above and 10 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A cross cut in a stone over a glass jar, marking triangulation station "English," is 9.27 meters southeast by east from the monument.

Reference Monument 248 (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about 2½ miles downstream from the dam at Fort Frances, Ontario. The station is about 60 meters west of a small stream passing just west of an old brick kiln. It is about 1 meter above high-water mark. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 249** (Minnesota, Koochiching County; Jesse Hill, 1914; 1926).—On the south bank of Rainy River, about 1% miles downstream from the dam at International Falls, Minn., and about 30 meters west of the mouth of a small stream. The station is on a round-topped rock which is part of a ledge projecting into the water. It is about 3 meters above and 5 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A 2-inch bronze disk set in the rock and marking triangulation station "Dump," is 0.06 meter north of the monument.

**Reference Monument 250** (Ontario, Rainy River District; Jesse Hill, 1914; 1926).—On the north bank of Rainy River, about 1¼ miles downstream from the dam at Fort Frances, Ontario. The station is on William Fair's property, on the first prominent point of the shore below Fort Frances. It is on a rock ledge about 5 meters above and 20 meters back from the river's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A 2-inch bronze disk set in the rock, marking triangulation station "Fish," is 0.08 meter west of the monument.

Reference Monument 251 (Ontario, Rainy River District; E. C. Barnard, 1913; 1926).—On Rainy River, on the highest point and on the west end of the second island below the boat landing at International Falls, Minn. Station mark: A standard 8-inch manganese-bronze reference post set in rock. A bronze disk, marking

triangulation station "Falls," is set in the same ledge, 0.13 meter distant.

Reference Monument 252 (Ontario, Rainy River District; E. C. Barnard, 1913; 1926).—On Rainy River, on the highest point and on the southeast side of the first island below the boat landing at International Falls, Minn. Station mark: A standard 8-inch manganese-bronze reference post set in rock. A bronze disk, marking triangulation station "National," is set in the same ledge, 0.14 meter distant.

Reference Monument 253 (Ontario, Rainy River District; E. C. Barnard, 1913; 1918).—On Rainy River, on the highest point and on the southwest end of the island about 180 meters below the boat landing at Fort Frances, Ontario.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

**Reference Monument 254** (Minnesota, Koochiching County; E. C. Barnard, 1913).—In the yard of the International Falls Paper Co., about 90 meters north of First Street, in line with Third Avenue, about 55 meters southwest of the shore of Rainy River and the same distance from the south end of the international bridge.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk marked "U. S. Geological Survey B. M. 1126," which is triangulation station "U. S. G. S. B. M.," is set in the same ledge, 0.15 meter distant.

**Reference Monument 255** (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On Rainy River, on the downstream end of the small island on which the middle pier of the Fort Frances-International Falls bridge rests.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "River," is set in the same ledge 0.12 meter distant.

Reference Monument 256 (Ontario, Rainy River District; E. C. Barnard, 1913; 1918).—On Rainy River, on the upstream end of the Fort Frances-International Falls bridge pier between the sluiceway and the river. It is south of the retaining wall of the sluiceway and 28.6 meters from the bridge abutment on the Canadian side of the river.

Station mark: A standard 8-inch manganese-bronze reference post set in the bridge pier. A bronze disk, marking triangulation station "Bridge," is set in the same pier, 0.09 meter distant.

**Reference Monument 257** (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On Rainy River, about three-fourths mile upstream from the Fort Frances-International Falls bridge and about 45 meters south of the railway track. It is on the highest point of a rocky knoll.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking triangulation station "Rock," is set in the same ledge, 0.15 meter distant.

**Reference Monument 258** (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On the south bank of Rainy River, about 1¼ miles upstream from the Fort Frances-International Falls bridge. It is opposite a large mill on the Canadian shore. It is about 45 meters west of a railway bridge over a small slough, about 12 meters south of the railway track, and 1 meter in front of a cabin.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk, marking triangulation station "Cabin," is set in a concrete base, 1.56 meters distant.

Reference Monument 259 (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On the south bank of Rainy River, about 1¾ miles upstream from the Fort Frances-International Falls bridge. It is on the river side of Mr. Kelly's house from which it is distant about 55 meters.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 260 (Ontario, Rainy River District; E. C. Barnard, 1913; 1918).—On the north bank of Rainy River, about 2 miles upstream from the Fort Frances-International Falls bridge. It is on the south side and east end of Scott Street, about 8 meters from the river bank.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk, set in a concrete base and marking triangulation station "Transformer," is south of the station 3.66 meters distant.

**Reference Monument 261** (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On the south bank of Rainy River, about one-half mile downstream from the Canadian National Railway bridge at Ranier, Minn., about 1 meter inland from the high-water mark on a high timbered point which is about 240 meters upstream from Jamison Landing. It is about 0.3 meter above the high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Jamison," is set in the same ledge at a distance of 0.08 meter.

Reference Monument 262 (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On the south bank of Rainy River, about 240 meters downstream from Hubbard (or Yacht) Point and about 400 meters upstream from Jamison Landing. It is about 0.2 meter above and 2 meters inland from high-water mark

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Canoe," is set in the same ledge 0.17 meter distant.

Reference Monument 263 (Ontario, Rainy River District; E. C. Barnard, 1913; 1918).—On the north bank of Rainy River, about 460 meters from the west end of the Canadian National Railway bridge. It is at the point where the railway crosses the wagon road and is about 23 meters from the railway and about 8 meters from the river bank.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk, marking triangulation station "Muskrat," is set in a concrete base 1.16 meters distant.

**Reference Monument 264** (Minnesota, Koochiching County; E. C. Barnard, 1913; 1918).—On the south bank of Rainy River, near the center of the end of Yacht (or Hubbard) Point, about 10 meters back from the shore line. It is about 8 meters south of a large lone pine tree.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A bronze disk, marking triangulation station "Hubbard," is set in a concrete base at a distance of 8.80 meters in azimuth  $158^{\circ}$  20' from the monument.

Reference Monument 265 (Ontario, Rainy River District; E. C. Barnard, 1913; 1926).—At the outlet of Rainy Lake, on the top of the lake end of the west abutment of the Canadian National Railway bridge. It is 1.36 meters from the north rail of the track.

Station mark: A standard 8-inch manganese-bronze reference post set in the top of the abutment.

Reference Monument 266 (Minnesota, Koochiching County; E. C. Barnard, 1913; 1926).—At the outlet of Rainy Lake, on top of the lake end of the second pier from the east end of the Canadian National Railway bridge. Station mark: A standard 8-inch manganese-bronze reference post set in the top of the pier. A bronze disk, marking triangulation station "Rainy Lake 1," is set in the pier 0.10 meter distant.

Reference Monument 267 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On the west end of Rainy Lake, about 1½ miles north of Ranier, Minn., on a high rocky knoll about 30 meters northeast of an old church and about 60 meters from the lake shore. It is about 11 meters above the lake level.

Station mark: A standard 8-inch manganese bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 3," is set in the same ledge at a distance of 0.21 meter.

Reference Monument 268 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On the west end of Rainy Lake, on the point of the shore about one-fourth mile northeast of the railroad station in Ranier, Minn. It is on a rock about 1 meter in diameter and 9 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking "Rainy Lake 2," is set in the same rock 0.09 meter distant.

**Reference Monument 269** (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the southern point of the island which is about one-half mile northeast of Lost Island. It is about 4.5 meters above the lake level; about 30 meters from the water's edge on the east, south, and west; and is the highest point of rock at this distance from the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bronze disk, marking triangulation station "Rainy Lake 8," is set in the same ledge 0.12 meter distant.

**Reference Monument 270** (Minnesota, Koochiching County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on the north end of Signal Island, the most northern of the Fransen Islands. It is about 11 meters from the shore line and about 3 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bronze disk, marking triangulation station "Rainy Lake 9," is set in the same ledge 0.14 meter south of the monument. A standard United States Coast and Geodetic Survey station mark disk, marking station "Lake," is set in the ledge 0.2 meter southwest of the monument. A standard United States Coast and Geodetic Survey reference-mark disk is set in the ledge 9.9 meters southeast of the monument.

Reference Monument 271 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island about 2¼ miles northeast of the Fransen Islands and about one-fourth mile north of the high island (Eight Mile Island) on which reference monument 272 is located. It is on the highest point of the

southern end of the island, about 5.5 meters above the lake level, about 22 meters from the south shore, and about 45 meters from the east and west shores.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 28," is set in the same ledge at a distance of 0.13 meter.

Reference Monument 272 (Minnesota, Koochiching County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on Eight Mile Island, a small island about 6 miles east of Ranier, Minn., near the middle of the lake. It is on the highest point of the island, about 15 meters above the lake level and about 30 meters from the east and south shores.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 12," is set in the same ledge at a distance of 0.13 meter.

Reference Monument 273 (Minnesota, Koochiching County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on the extreme eastern point of Red Sucker Island at the narrowest part of the American Narrows. It is about 1.5 meters above the lake level, about 12 meters from the east shore, and about 8 meters from the north shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 35," is set in the same ledge at a distance of 0.17 meter.

**Reference Monument 274** (Ontario, Rainy River District; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on the east side of American Narrows, on the west end of the small island which lies between Red Pine and Red Sucker Islands. It is about 1 meter above the lake level, about 5 meters from the south shore, 8 meters from the west shore, and 12 meters from the north shore. It is about 12 meters south of a pine tree which is blazed on four sides and marked "91245" on the west side.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 34," is set in the same ledge at a distance of 0.10 meter.

**Reference Monument 275** (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the southwestern point of Red Pine Island. It is about 1 meter above the water surface, about 8 meters from the south shore, 5 meters from the west shore, and 2 meters from the north shore of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 36," is set in the same ledge at a distance of 0.13 meter.

Reference Monument 276 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on the small round island just north of the middle of Grindstone Island. It is in the center of the island and on its highest point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 39," is set in the same ledge at a distance of 0.18 meter.

**Reference Monument 277** (Ontario, Rainy River District; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on the small island about one-half mile due north of Powder (or Lobstick) Island and about one-half mile east of the buildings on the point on the south shore of Sand Point Island. The island is about 50 meters long (its east and west dimension) and about 12 meters wide. The monument is on its highest point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 27," is set in the same ledge at a distance of 0.07 meter.

Reference Monument 278 (Minnesota, Koochiching County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on Powder (or Lobstick) Island, the small island five-eighths mile southeast of the buildings on the low point on the south side of Sand Point Island. It is about 8 meters southeast of a prominent lobstick tree (a tree which has had its limbs cut off to make it recognizable as a range mark) and is about 1 meter above the water surface.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 26," is set in the same ledge at a distance of 0.12 meter.

**Reference Monument 279** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on the north end of Steamboat Island, just north of the steamboat channel, about 1 mile north of the entrance to Cranberry Bay and about 2½ miles south of Little Rocky Narrows. There is a rock about 30 meters long and 3 meters wide about 30 meters distant from the north shore. The station is about 7 meters from the west shore, 30 meters from the north shore, and 15 meters from the east shore, and is about 2.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 41," is set in the same ledge at a distance of 0.38 meter.

**Reference Monument 280** (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island about 1¾ miles northeast of Steamboat Island. The island is the most western of the large group of small islands northwest of Brule Narrows. The station is on the highest point of the island,

about 3.5 meters above the lake level, midway between the east and west ends of the island and about 8 meters from the north shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 47," is set in the same ledge at a distance of 0.29 meter.

**Reference Monument 281** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island about  $2\frac{1}{2}$  miles east of Steamboat Island and about  $1\frac{1}{4}$  miles northwest of MacKenzie Island. The island is the most southern of the large group of small islands northwest of Brule Narrows; it is barren except for a few dead trees; and it is about 120 meters long and 60 meters wide. The station is about 1.5 meters above the lake level, about 22 meters from the west shore, 30 meters from the south shore, and 6 meters from the north shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 44," is set in the same ledge at a distance of 0.44 meter.

**Reference Monument 282** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island at the eastern end of the group of small islands northwest of Brule Narrows, and about 1¼ miles northwest of MacKenzie Island. The island is timbered, rather high, and is about one-half mile south by west of Bald Island, a high barren island. The station is on the highest part of the east end of the island, about 8 meters from the north and south shores and about 15 meters from the east end of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 45," is set in the same ledge at a distance of 0.25 meter.

**Reference Monument 283** (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, near the highest point of Bald Island, a high, bold, barren island, on the south side of the entrance to Seine Bay. It is near the center of the island and about 18 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Baldy," is set in the same ledge at a distance of 0.43 meter. Three iron bolts were set as reference marks for triangulation station "Baldy." (See p. 500.)

**Reference Monument 284** (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on an island at the north side of the entrance to Bleak Bay, about 1<sup>3</sup>/<sub>4</sub> miles due north of the western end of MacKenzie Island, and about three-fourths mile east of Bald Island. It is on the southwest point of the island, about 2.5 meters above the lake level, about 9 meters from the west shore, 9 meters from the south shore, and 38 meters from the southwest tip of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 48," is set in the same ledge at a distance of 0.46 meter.

Reference Monument 285 (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island about 340 meters from the mainland at the west entrance to Brule Narrows. The island is about 40 meters long (east and west), 12 meters wide, and is bare except for two trees. The station is at approximately the highest point of the island, about 1.5 meters above the lake level, about 4.5 meters from the south shore, and about 22 meters from the west shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, markng triangulation station "Rainy Lake 42," is set in the same ledge at a distance of 0.35 meter.

**Reference Monument 286** (Ontario, Rainy River District; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on the south end of the large island just west of MacKenzie Island, at the west entrance to Brule Narrows. It is on approximately the highest point of this part of the island, about 8 meters above the level of the lake, about 9 meters from the east shore, 54 meters from the south shore, and 150 meters from the west shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 50," is set in the same ledge at a distance of 0.39 meter.

**Reference Monument 287** (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the extreme southern point of MacKenzie Island, on the north side of Brule Narrows near the western entrance. The station is about 1 meter above the lake level and about 15 meters from the end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 54," is set in the same ledge at a distance of 0.30 meter.

**Reference Monument 288** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on the east end of an island on the south side and near the middle of Brule Narrows, about 360 meters southwest of the lone tree used as a range mark by steamboat pilots. The station is about 2 meters above the lake level, about 15 meters from the east end of the island and about 3 meters from the north shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 56," is set in the same ledge at a distance of 0.32 meter.

Reference Monument 289 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the west end of the large island which is at the north side of the east entrance to Brule Narrows. It is 96030—31—26

on a high point of the island about 4.5 meters above the lake level, about 50 meters southeast of the head of a small bay, about 50 meters east of several tall Norway pine trees, and about 30 meters west of a little swamp. Three lines of sight are cut from the station through the timber to the southeast, south, and southwest.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk, marking triangulation station "Rainy Lake 61," is set in the same ledge at a distance of 0.26 meter.

**Reference Monument 290** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on the south side of Brule Narrows, on a point of the mainland about three-fourths mile inside the east entrance and about three-fourths mile southeast of Lone Tree Island. It is about 4 meters above the lake level, about 15 meters from the north shore, 75 meters from the east shore, and 54 meters from the south shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk marking triangulation station "Rainy Lake 59" is set in the same ledge at a distance of 0.37 meter.

**Reference Monument 291** (Minnesota, St. Louis County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on the end of Point Observe (Soldier Point) at the south side of the east entrance to Brule Narrows. It is on the highest part of the point about 1 meter above the lake level and about 2 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk marking triangulation station "Rainy Lake 60" is set in the same ledge at a distance of 0.34 meter.

**Reference Monument 292** (Ontario, Rainy River District; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on a small timbered island on the north side of the east entrance to Brule Narrows. It is on the highest point of the island about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk marking triangulation station "Rainy Lake 66" is set in the same ledge at a distance of 0.37 meter.

**Reference Monument 293** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, about 2½ miles southeast of the east entrance to Brule Narrows, on the high prominent point at the northeast end of Shelland Island, the most eastern of the Pine Islands. It is about 6 meters above the lake level and about 30 meters from the end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk marking triangulation station "Rainy Lake 65" is set in the same ledge at a distance of 0.24 meter.

**Reference Monument 294** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 3¾ miles east of the east entrance to Brule Narrows, on a small, high, bare island about 50 meters southwest of Anchor island. It is about 2.5 meters above the lake level, about 2 meters from the east shore of the island 15 meters from the west shore, and 21 meters from the north shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A standard U. S. C. & G. S. station mark disk, marking traverse station "Manitou" is set in the rock 11.89 meters from the station in azimuth 296° 43′.

**Reference Monument 295** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 8½ miles east of the eastern entrance to Brule Narrows about three-fourths mile north of Minnitaki (or Gowdy) Island, on the south end of a small island which is near the middle of the lake. The station is about 3.5 meters above the lake level, about 9 meters from the south shore and 18 meters from the west shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 296** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Rainy Lake, about 8½ miles east of the eastern entrance to Brule Narrows, about one-fourth mile north of Minnitaki (or Gowdy) Island, on the eastern end of a small timbered island, the most northern of a group of small islands. The station is about 3 meters above the lake level and about 3 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 297** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Rainy Lake, about 9½ miles east of Brule Narrows, on a small, high, timbered island about 4 miles northwest of Kettle Falls of the boundary channel, and 1 mile due south of the west end of Black Point Island. The station is on the highest part of the island near the center, about 7 meters above the lake level and about 30 meters from the northeast shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 298** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake on a small, low island about 10 miles east of the east entrance to Brule Narrows, about 4 miles northwest of Kettle Falls of the boundary channel and 360 meters southeast of a high rocky cliff on Black Point Island. The station is near the center of the island and on its highest point, about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

Reference Monument 299 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Rainy Lake, on the northwest point of Sand Bay Island, about 11 miles east of the east entrance to Brule Narrows and about

3 miles northwest of Kettle Falls of the boundary channel. It is on the highest part of a bold rocky point about 8 meters above the lake level. West of the station is a group of small jack pines and east of it are several tall Norway pines.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 300** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, on Vague Point, a prominent point about 12 miles east of the eastern entrance to Brule Narrows, about 1¼ miles northwest of Breezy Island, and about 1¼ miles northeast of Sand Narrows. It is in burnt jack-pine timber, about 3 meters above the lake level, about 45 meters north of the south shore of the point and about 340 meters east of the southwest extremity of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock. A bronze disk marking triangulation station "Vague" is set in the same ledge at a distance of 0.31 meter. Two iron bolts, reference marks for triangulation station "Vague," are distant about 5 meters from the monument.

**Reference Monument 301** (Minnesota, St. Louis County; James H. Van Wagenen, 1914; 1925).—On Rainy Lake, on the east end of Rabbit Island, the first timbered island east of Sand Narrows, about 12 miles east of the east entrance to Brule Narrows and about 2 miles north of Kettle Falls of the boundary channel. The station is about 2 meters above the lake level and at the extreme eastern end of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 302** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, on the south end of Breezy Island, about 12½ miles east of the east entrance to Brule Narrows and about 3 miles north of Kettle Falls of the boundary channel. It is on the highest point of the southern end of the island, about 13 meters above the lake level, on a bare ladge about 100 meters southeast of the narrowest part of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

Reference Monument 303 (Minnesota, St. Louis County; James H. Van Wagenen, 1914; 1925).—On Rainy Lake, about 1½ miles north of Kettle Falls of the boundary channel and about one-half mile northwest of Surveyors Island and the mouth of Kettle River. The station is on the second point from the north of the four points which project eastward from this part of the mainland. It is about 5 meters above the lake level, about 5 meters from the south shore of the point, and about 15 meters from the east half of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

Reference Monument 304 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 1½ miles north of Kettle Falls of the boundary channel and about one-fourth mile north of Surveyors Island and the mouth of Kettle River; near the south shore of the largest island off the northwest shore of Oak Point Island. It is on the highest part of the west half of the island, about 7 meters above the lake level, about 25 meters from the south shore, and about 70 meters from the southwest point of the island. Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 305** (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on Surveyors Island, at the mouth of Kettle River, about 1¼ miles north of Kettle Falls of the boundary channel. The monument is on the west end of the island on its highest point, about 4 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in solid rock.

**Reference Monument 306** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On the northwest point of Oak Point Island, at the mouth of Kettle River. It is on a high bare rock about 14 meters above the lake level, about 110 meters from the north shore of the point, and about 80 meters from the little bay on line between the station and Surveyors Island. Through the timber on the point five lines of sight have been cut from the station toward other triangulation stations.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 307** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the mainland, about 300 meters south of Surveyors Island and the mouth of the river. It is on a high bare knoll, near the top of the steep slope, about 8 meters above the lake level and about 20 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 308** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the first prominent point on the Oak Point Island shore after entering the river and one-fourth mile from its mouth. At high water the part of the point on which the station is located will become an island. The station is on the highest point of a bare rock about 2 meters from its west side and about 2 meters above the normal lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 309 (Minnesota, St. Louis County; James H. Van Wagenen, 1914; 1925).—On Kettle River, on the mainland, about 500 meters south of Surveyors Island and of the mouth of the river, on the point of land at the first bend in the river above its mouth. It is in the timber, on the highest rock on the point, about 5 meters above the water surface of the river, about 20 meters from the shore of the little bay on the northeast, and about 30 meters from the shore on the southeast.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 310** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the Oak Point Island shore, about 600 meters south of Surveyors Island and of the mouth of the river, and directly opposite the point of land at the first bend in the river above its mouth. It is about 9 meters above the water surface of the river and about 30 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 311** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the mainland, about 700 meters south of Surveyors Island and the mouth of the river, and at the first narrow place in the river above its mouth. It is about 5 meters above the water surface and about 30 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 312** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the Oak Point Island shore, about 700 meters south of Surveyors Island and of the mouth of the river, and at the first narrow place in the river above its mouth. It is about 8 meters above the water surface and about 25 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 313** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the Oak Point Island shore, about 1,050 meters south of Surveyors Island and the mouth of the river, and about 1,100 meters northeast of Kettle Falls of the boundary channel, on a low point at the second extremely narrow place in the river above its mouth. It is about 3 meters above the water surface, about 6 meters from the end of the point, about 2 meters from the west shore, and about 4 meters from the east shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

Reference Monument 314 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the mainland, about 1,050 meters south of Surveyors Island and the mouth of the river, about 1,100 meters northeast of Kettle Falls of the boundary channel, and on a high point at the second extremely narrow place in the river above its mouth. It is on a smooth high rock, about 7 meters above the water surface and about 15 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 315** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River about 800 meters northeast of Kettle Falls of the boundary channel, and on a high point of the mainland which becomes an island at high water. The station is about 300 meters due south of the second extremely narrow place in the river above its mouth. It is on the highest bare rock on the north end of the point, about 6 meters above the water surface, about 30 meters from the east and west shores and about 50 meters from the northeast end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

Reference Monument 316 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, about 850 meters northeast of Kettle Falls of the boundary channel, on an island about 100 meters long which is about 25 meters southwest of the boundary channel. The station is on a bare rock near the center of the island, about 5 meters above the water surface, and about 6 meters northeast of the highest point on the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 317** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, about 1,000 meters northeast of Kettle Falls of the boundary channel, on an island about 100 meters long which is about 25 meters northeast of the boundary channel. It is near the center and on the highest point of the island, about 2.5 meters above the water surface, on a bare rock which slopes in all directions. It is about 6 meters from the northwest side of the island and about 13 meters from the southeast side.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

after Reference Monument 318 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the Oak Point Island shore, about 1,100 meters northeast of Kettle Falls of the boundary channel, and about 250 meters due east of the two islands between which the boundary passes. It is on the hillside on a bare white rock about 8 meters above the water surface and about 50 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

388

**Reference Monument 319** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the mainland, about 800 meters northeast of Kettle Falls of the boundary channel, near the end of the long peninsula which extends from Kettle Falls toward the northeast. It is about 150 meters south of the nearer of the two islands between which the boundary passes. It is on a high, bare rock, the highest in this vicinity, about 4 meters above the water surface, about 35 meters from the end of the point, and about 8 meters from the southeast shore of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 320** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the Oak Point Island shore, about 1,050 meters east of Kettle Falls of the boundary channel, and about 100 meters east of the sharp bend in the steamboat channel where, on approaching Kettle Falls, the boats turn toward the southwest just before they enter the narrow part of the channel. It is on a high, bare rock about 4 meters above the water surface, about 10 meters from the north shore of the point, 18 meters from the south shore, and about 45 meters from the end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 321** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, about 650 meters east of the falls in the boundary channel at Kettle Falls. It is on the most northern point of an island which lies between the Canadian and American channels. It is on the highest bare rock on the point, about 5 meters above the water surface of the river, about 35 meters from the west shore of the point, about 20 meters from the north shore, and about 25 meters from the east shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 322 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, about 600 meters east of the falls in the boundary channel at Kettle Falls. It is on the southeastern extremity of the long, high peninsula which extends toward the northeast from the dam in the boundary channel. It is about 5 meters above the water surface of the river, about 10 meters from the east and west shores of the point, and about 2 meters from the south shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 323** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River about 220 meters east of the falls in the boundary channel at Kettle Falls. It is on a broad point of the mainland which projects south toward the first narrow place in the boundary channel east of the American (or Boundary) Falls. It is on a bare ledge in scattered timber, about 3.5 meters above the water surface, about 12 meters from the south shore and about 27 meters from the west shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 324** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, about 260 meters east of the dam at the boundary falls. It is on the most western point of an island which lies between the Canadian and boundary channels. It is on the highest bare rock on the point, about 5 meters above the water surface below the falls, about 12 meters from the end of the point, and about 10 meters from the northwest shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 325** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on a point of the mainland, about 12 meters downstream from the north end of the dam in the boundary channel at Kettle Falls. It is about 8.5 meters above the water surface of the river below the falls, and about 9 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 326** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the hillside, about 27 meters downstream from the south end of the dam in the boundary channel at Kettle Falls. It is on a bare rock about 9 meters above the water surface in the river below the falls and about 15 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 327** (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River at the outlet of Lake Namakan on the first small, bare point projecting from the mainland, about 90 meters upstream from the dam in the boundary channel at Kettle Falls. It is on the highest point of the rock about 2.5 meters above the surface of the river above the dam, and about 5 meters from the end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

**Reference Monument 328** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River at the outlet of Lake Namakan, on the steep, rocky hillside about 100 meters upstream from the south end of the dam in the boundary channel at Kettle Falls. It is about 7 meters from the shore and about 6 meters above the water surface in the river above the falls.

Station mark: A standard 8-inch manganese-bronze reference post set in ledge rock.

## APPENDIX V

**Reference Monument 32)** (Ontario, Rainy River District; James H. Van Wagenen, 1914; 1925).—On Namakan Lake, about half a mile west of the international dam at Kettle Falls, on a knoll at the entrance to the narrows; about 50 feet from the shore and about 10 feet above the high-water mark. Station mark: A magnetic state of the international dam is a drill hole in reak in place.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 330 (Minnesota, St. Louis County; James H. Van Wagenen, 1914; 1915).—On Namakan Lake, about half a mile west of the international dam at Kettle Falls, about 175 feet east of the entrance to the narrows; about 70 feet from shore and 20 feet above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 331** (Ontario, Rainy River District; J. J. McArthur, 1915; 1925.)—On Namakan Lake about three-fourths of a mile west of Kettle Falls, on the north side of the island, the second from the United States shore; about 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 332** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake about three-fourths of a mile west of Kettle Falls, on the highest point of the island, the first from the United States shore; about 7 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 333** (Ontario, Rainy River District; J. J. McArthur, 1915; 1925).—On Namakan Lake, about 1 mile west of Kettle Falls, on a point near the middle of Squirrel Narrows; about 20 feet from the shore and 15 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 334** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On Namakan Lake, about 1 mile west of Kettle Falls, on a point near the middle of Squirrel Narrows; about 20 feet from the shore and 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 335** (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, 2 miles west of Kettle Falls, on a prominent point midway between Squirrel Narrows and Squaw Narrows; close to the shore and about 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 336 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On Namakan Lake, 2 miles west of Kettle Falls, due north from reference monument 335; about 150 feet from the shore and 30 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 337** (Ontario, Rainy River District; J. J. McArthur, 1915; 1925).—On Namakan Lake, about 2½ miles west of Kettle Falls, where the channel makes a right-angle bend. It is on the west end of the rock ridge, 5 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 338 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, about 2½ miles west of Kettle Falls, where the channel makes a right-angle bend. It is on a small rocky island about 300 feet southwest of Mica Island near the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 339** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On Namakan Lake, about 3 miles west-southwest of Kettle Falls, on the point at the northeast end of Squaw Narrows; close to the shore and about 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 340** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, about 3 miles west-southwest of Kettle Falls, on a point near the middle of Squaw Narrows, close to the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 341** (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, on the northwest point of Moose Island, the large island on the south side of the Canadian channel three-fourths mile south of Squaw Narrows. The monument is about 100 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 342** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On Namakan Lake on the highest point of a circular island, on line with and the second from Squirrel Narrows. The monument is 20 or 30 feet above the high-water mark and 300 feet from shore.

**Reference Monument 343** (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, on the southwestern point of Moose Island, the large island on the south side of Canadian Channel 1 mile south of Squaw Narrows. The monument is close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 344** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, on an island of almost vertical strata, about 200 feet in diameter 1,500 feet west of reference monument 343. The monument is about 45 feet south of the highest point of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 345 (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, on the east end of a narrow rocky island about 300 feet long, 2,000 feet south of reference monument 343. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 346** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, on Bivo Island; 200 feet from the eastern end of the island, which is about 800 feet long by 400 feet wide, lies 1,500 feet west of reference monument 345, and is one-half mile south of reference monument 344.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 347** (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, on the northeastern end of a low island about 200 feet by 100 feet, two hundred feet south of Blue Island, which is about one-third of a mile in diameter.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 348** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On Namakan Lake, on the northeastern end of Twinalligator Island, a circular island about 700 feet in diameter about a mile north of Junction Bay, the second island east of Namakan Island, an island about 2 miles long. The monument is about 30 feet above the high-water mark and 100 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill-hole in rock in place.

Reference Monument 349 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On Namakan Lake, on the west side of Randolph Island, about 1,000 feet south of the small low island in the bay. The monument is close to the shore line.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 350** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, on the southwest side of an island about 300 feet long, 1,000 feet west of Randolph Island. The monument is about 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 351 (Ontario, Rainy River District; J. J. McArthur, 1915; 1925).—On Namakan Lake, on the south side of the small island just south of Randolph Island; close to the shore line.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 352 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, on the northeastern slope of Jug Island, the more eastern of two about 1,500 feet long one-third mile south of Randolph Island. The monument is about 500 feet from the most eastern point, 200 feet from shore, and 40 or 50 feet above high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 353 (Ontario, Rainy River District; J. J. McArthur, 1915; 1925).—On Namakan Lake, on a small rocky island, the most southern of several islands south of Blackstone Island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 354** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On Namakan Lake, on a bluff on the United States mainland due south from Blackstone Island about 1,000 feet west of an island 500 feet long which is close to the shore. The monument is about 100 feet from the shore and 20 or 30 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 355 (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, on the highest part of Gull Island, which is about 1,000 feet long by 800 feet wide and lies 500 feet north of a much smaller island, midway between the Canadian and United States shores.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 356 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1925).—On Namakan Lake, on the highest part of an island about 1,500 feet long, one-third mile north of the point on the United States main-

## APPENDIX V

land at the west side of the entrance of a large bay. There is a large body of open water to the north, east, and west.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place. Station "Namakan," a 2-inch bronze disk set in a drill hole in rock, is 0.11 meter northwest of the monument.

Reference Monument 357 (Ontario, Rainy River District; J. J. McArthur, 1915).—On Namakan Lake, on a low solitary island about 200 feet long, which lies about 500 feet from the Canadian mainland and about 2 miles northeast of Gull Island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 358 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On Namakan Lake, on the most western tip of a solitary island about 500 feet long, half a mile from the United States shore and about 2 miles west of Namakan Narrows. The monument is close to the shore and the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 359 (Ontario, Rainy River District; J. J. McArthur, 1915).—Near the eastern end of Namakan Lake, about a mile northwest of Namakan Narrows. The monument is at the west end of an island 1,500 feet long, which lies near the middle of the west side of a large group of islands stretching in a northeasterly direction from the United States shore toward the Canadian mainland. The island is about one-half mile north of the Steamboat Channel. The monument is close to the shore and the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 360** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1923).—Near the eastern end of Namakan Lake, on a small island about a mile northwest of Namakan Narrows. The monument is about 800 feet southwest of reference monument 359.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 361** (Ontario, Rainy River District; J. J. McArthur, 1915).—Near the eastern end of Namakan Lake, about 1 mile northwest of Namakan Narrows, at the western end of an island 300 feet long, which lies 200 feet west of an island one-half mile long in a north and south direction. The monument is 2,200 feet east of reference monument 359.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 362** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Near the eastern end of Namakan Lake, on the northeastern point of an island about 2,000 feet long in an east and west direction. The monument is 1,500 feet southwest of reference monument 361 and about 800 feet southeast of reference monument 359.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 363 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the east side of the north entrance to Namakan Narrows, on a knoll about 20 feet above the high-water mark. The monument is close to the shore and 200 feet north of a small island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 364 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the west side of the north entrance to Namakan Narrows, on a knoll, 200 feet from the shore and about 25 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 365 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On a point about 300 feet long on the east side of Namakan Narrows two-thirds mile from the north end and about one-half mile from the south end of the narrows; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 366 (Minnesota, St. Louis County; J. J. McArthur, 1915).—At the southeast end of a ridge on the west side of and 2,000 feet from the north end of Namakan Narrows; 200 feet from the shore and 60 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 367 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the east side of Namakan Narrows on the north end of a ridge about one-third mile from the south entrance to the narrows; about 150 feet from the shore and 45 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 368** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the west side of Namakan Narrows, on the top of a knoll about one-third mile from the south entrance to the narrows; 100 feet from the shore and about 30 feet above the high-water mark.

Reference Monument 369 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the east side of the south entrance to Namakan Narrows, on the top of a ridge; about 75 feet from the shore and 25 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 370 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the west side of the south entrance to Namakan Narrows, on the east side of a point on Sand Point Lake, 600 feet from reference monument 369.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 371** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On Sand Point Lake, on a ridge on the mainland one-fourth mile south of the entrance to Namakan Narrows, near the middle of the ridge and near the top.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 372** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On Sand Point Lake, on a ridge at the east end of an island about 1,500 feet long, one-fourth mile south of the entrance to Namaken Narrows; about 150 feet from the most eastern tip of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 373** (Ontario, Rainy River District; J. J. McArthur, 1915).—One-half mile southeast of Namakan Narrows, on the northwest end of a small island in Sand Point Lake. The island is about 200 feet long and near the middle of the channel.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 374** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Two-thirds mile southeast of Namakan Narrows, on the most northern part of an island, 400 feet in diameter, in Sand Point Lake. The monument is about 800 feet south of reference monument 373.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 375 (Ontario, Rainy River District; J. J. McArthur, 1915).—One and one-half miles southeast of Namakan Narrows, on an island about 600 feet long, 200 feet from the Canadian mainland, in Sand Point Lake. The monument is on the south side of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 376** (Ontario, Rainy River District; J. J. McArthur, 1915).—Two miles southeast of Namakan Narrows, on an island in Sand Point Lake. The island is about 400 feet long and 1,000 feet northwest from the point of the Canadian mainland at the south side of the entrance to Red Horse Bay. The monument is close to the shore on the northwest end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 377** (Ontario, Rainy River District; J. J. McArthur, 1915).—On an island in Sand Point Lake, 2½ miles southeast of Namakan Narrows. The island is about 800 feet long and about 1,000 feet from the Canadian mainland. The monument is on the west side of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 378** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On an island in Sand Point Lake, 2½ miles southeast of Namakan Narrows. The island is about 800 feet long and one-third mile southeast of the most eastern point of the United States mainland opposite Red Horse Bay. The monument is near the summit of the island, toward the point at the middle of the west side.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 379 (Ontario, Rainy River District; J. J. McArthur, 1915).—On an island in Sand Point Lake, 4 miles south of Namakan Narrows. The island is a small rocky one just off the long sandy point on the Canadian mainland, about 600 feet from high-water mark on the mainland.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 380 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On a point of the United States mainland of Sand Point Lake, 4 miles south of Namakan Narrows, north of the entrance to Grassy Bay. The monument is close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 381 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the point of the Canadian mainland of Sand Point Lake, 4<sup>2</sup>/<sub>3</sub> miles south of Namakan Narrows, at the north side of the entrance to Clearwater Lake, on the most western knob of the ridge. The monument is about 300 feet from the shore and 50 feet above the high-water mark.

**Reference Monument 382** (Minnesota, St Louis County; J. J. McArthur, 1915).—On the United States mainland, 4½ miles south of Namakan Narrows; about halfway between the south end of the group of islands at the entrance to Grassy Bay and the narrows in Sand Point Lake, just above high-water mark and about 50 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 383 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the Canadian mainland, 5 miles south of Namakan Narrows, on the point of the Canadian side of the narrows in Sand Point Lake close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 384** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the United States mainland, 5 miles south of Namakan Narrows; on the highest point of the more southern of the two knolls on the United States side of the narrows in Sand Point Lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 385** (Ontario, Rainy River District; J. J. McArthur, 1915).—On the Canadian side of the narrows at the south end of Sand Point Lake, about 5 miles north of Harding, Minn. The monument is near the edge of the cliff about 30 feet above the high-water mark and opposite the island at the entrance to the narrows.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 386** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1916).—At the east end of the small island at the mouth of the narrows at the south end of Sand Point Lake, 5 miles north of Harding, Minn. The monument is near the shore and the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 387 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the nose of the ridge on the Canadian side of the narrowest part of the narrows between Sand Point Lake and Little Vermilion Lake, 4 miles northeast of Harding, Minn. The monument is about 70 feet above the high-water mark and about 300 feet from the end of the nose.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 388** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Four miles northeast of Harding, Minn., on the United States side of the narrows just north of the narrowest part, on a projecting outcrop of rock; close to the shore and the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 389 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Four miles northeast of Harding, Minn., on the east side of the narrowest part of the narrows between Sand Point and Little Vermilion Lakes, about 500 feet from the north end of the ridge, 200 feet from the shore and 50 or 60 feet above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 390 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Four miles northeast of Harding, Minn., on the west side of the narrows between Sand Point and Little Vermilion Lakes, about 200 feet south of the narrowest part; close to the shore and just above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 391** (Ontario, Rainy River District; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn., on the east side of the narrows between Sand Point and Little Vermilion Lakes, about 1,500 feet south of the narrowest part, and about 55 feet above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 392** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the west side of the narrows between Sand Point and Little Vermilion Lakes about 1,500 feet south of the narrowest part, on a ridge about 1,000 feet north of the mouth of a creek; 400 feet from shore and 40 or 50 feet above high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 393 (Ontario, Rainy River District; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn., on the east side of the narrows between Sand Point and Little Vermilion Lakes, one-half mile south of the narrowest part, on the north side of a depression in the hillside; about 100 feet from the shore line and 30 feet above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 394 (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the west side of the narrows between Sand Point and Little Vermilion Lakes, one-half mile

from the north end of the narrows; 700 feet south of the mouth of a creek, 100 feet from the shore line, and 20 or 30 feet above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 395** (Ontario, Rainy River District; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the east side of the narrows between Sand Point and Little Vermilion Lakes, on a point where the channel makes a right-angle turn; close to the shore line on the west side of the point and a little above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 396** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the west side of the narrows between Sand Point and Little Vermilion Lakes where the channel makes a right-angle turn; near the top and on the north end of a steep hill, 300 feet from the shore and about 100 feet above the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 397 (Ontario, Rainy River District; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; at the north side of the south entrance to the narrows between Sand Point and Little Vermilion Lakes, 500 feet west of the small island at the entrance to the narrows; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 398** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; at the south side of the south entrance to the narrows between Sand Point and Little Vermilion Lakes; at the northwest end of the knoll at the north end of the long point; 20 or 30 feet above water and about 100 feet from the shore.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 399** (Ontario, Rainy River District; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the west side of the large island in Little Vermilion Lake, at the entrance to the narrows between Sand Point and Little Vermilion Lakes, about 1,000 feet from the north end of the island; 30 or 40 feet above water and about 100 feet from the shore.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 400** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the mainland on the west side of Little Vermilion Lake; opposite the large island at the entrance to the narrows between Sand Point and Little Vermilion Lakes; on top of the knoll about 1,000 feet south of the north end of the point.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 401** (Ontario, Rainy River District; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the Canadian shore of Little Vermilion Lake, about 1 mile south of the narrows; at the northern end of a ridge and about 1,000 feet north of the mouth of a creek; 40 or 50 feet above the water and about 100 feet from the shore.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 402** (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles northeast of Harding, Minn.; on the United States shore of Little Vermilion Lake, about 1 mile south of the narrows; near the middle and at the top of a ridge about half a mile long; 60 or 70 feet above the water level and about 200 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 403** (Ontario, Rainy River District; J. J. McArthur, 1915).—Four and one-half miles east of Harding, Minn.; on the Canadian shore of Little Vermilion Lake, 2 miles south of the narrows; almost 400 feet from the point between the lake and the long narrow bay extending in a northerly direction; close to the shore and the high-water mark.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 404 (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four miles east of Harding, Minn., on the United States shore of Little Vermilion Lake, about 500 feet north of a prominent point about 2 miles south of the narrows; 30 or 40 feet above the high-water mark and about 100 feet from the shore.

Station mark: A manganese-bronze monument, 8 inches high, set in a drill hole in rock in place.

Reference Monument 405 (Ontario, Rainy River District; J. J. McArthur, 1915).—Five miles east of Harding, Minn.; on the Canadian shore of Little Vermilion Lake, about a mile from the south end of the lake and about a third of a mile southeast of an island that is near the middle of the lake; close to the shore and the high-water mark.

Reference Monument 406 (Minnesota, St. Louis County; J. J. McArthur, 1915).—Four and one-half miles east of Harding, Minn.; on the United States side of Little Vermilion Lake about a mile from the south end of the lake, on a projecting slope about a third of a mile south of an island that is near the middle of the lake; 10 or 20 feet above the high-water mark and about 100 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 407** (Ontario, Rainy River District; J. J. McArthur, 1915).—Five and one-half miles east of Harding, Minn.; on the east shore at the south end of Little Vermilion Lake and at the mouth of Loon River, on a rock shoulder projecting from the side of the hill; about 130 feet above the high-water mark and 400 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 408 (Minnesota, St. Louis County; J. J. McArthur, 1915).—Five and one-half miles east of Harding, Minn.; on the west shore at the south end of Little Vermilion Lake and at the mouth of Loon River, on the highest part of the hill; about 100 feet above the high-water mark and 500 feet from the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 409 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Five and one-half miles east of Harding, Minn.; on the right bank at the south end of the narrows between Little Vermilion. Lake and Loon River; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 410 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Five and one-half miles east of Harding, Minn.; on the left bank at the south end of the narrows between Little Vermilion Lake and Loon River; close to the shore and about 5 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 411 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Five and one-half miles east of Harding, Minn.; on the right bank of Loon River, about one-half mile upstream from the narrows between Little Vermilion Lake and Loon River, on top of a large detached rock about 15 feet high, 50 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 412 (Minnesota, St. Louis County; J. J. McArthur, 1915).—Five miles east of Harding, Minn.; near the top of the high hill about one-fourth mile southwest of the narrows between Little Vermilion Lake and Loon River; about 150 feet above the high-water mark and 1,000 feet from the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 413 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Five and one-half miles east of Harding, Minn.; on the right bank of Loon River about three-fourths mile upstream from the narrows between Little Vermilion Lake and Loon River; about 30 feet from the shore and 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 414 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Five and one-half miles east of Harding, Minn.; on the left bank of Loon River about three-fourths mile upstream from the narrows between Little Vermilion Lake and Loon River; about 100 feet south of a small dry gully; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 415** (Ontario, Rainy River District; J. J. McArthur, 1915).—Five and one-half mileseast of Harding, Minn.; near the edge of a high cliff on the right bank of Loon River, about a mile upstream from the narrows between Little Vermilion Lake and Loon River; about 180 feet above the high-water mark and 300 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 416** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Five and one-half miles east of Harding, Minn.; on the left bank of Loon River, 800 feet southwest of the end of a long point projecting into the river from the United States shore, about a mile upstream from the narrows between Little Vermilion Lake and Loon River; close to shore and high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 417 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Five and one-half miles southeast of Harding, Minn.; on the left bank of Loon River about a mile above the narrows, 400 feet south of the point on the Canadian side where the river takes a right-angle turn; close to the shore and the high-water mark.

Reference Monument 418 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Five and one-half miles southeast of Harding, Minn.; on the left bank of Loon River, 1¼ miles upstream from the narrows between Little Vermilion Lake and Loon River; on the shoulder of a point about 800 feet long; close to the shore and about 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 419 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Five and one-half miles southeast of Harding, Minn.; on the right bank of Loon River, about 1½ miles upstream from the narrows between Little Vermilion Lake and Loon River; 200 feet north of the mouth of a small creek; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 420** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Five and one-half miles southeast of Harding, Minn.; on the left bank of Loon River, about 1½ miles upstream from the narrows between Little Vermilion Lake and Loon River; 400 feet northwest from the mouth of a small creek on the Canadian side; about 40 feet from the shore and 15 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 421** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Six miles southeast of Harding, Minn.; on the right bank of Loon River about 1¾ miles upstream from the narrows between Little Vermilion Lake and Loon River; 200 feet around the bend which is 1,000 feet south of the small creek on the Canadian side; 20 feet from the shore and 5 or 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 422 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Six miles southeast of Harding, Minn.; on the left bank of Loon River about 1¾ miles upstream from the narrows between Little Vermilion Lake and Loon River, at the bend of the river, which is 1,000 feet south of the small creek on the Canadian side; 75 feet from the shore and about 15 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 423 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Six miles southeast of Harding, Minn.; on the right bank of Loon River about 1% miles upstream from the narrows between Little Vermilion Lake and Loon River; 300 feet north of a low point on the Canadian shore; close to the shore and high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 424** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Six miles southeast of Harding, Minn.; on the left bank of Loon River about 2 miles upstream from the narrows between Little Vermilion Lake and Loon River; opposite a low point on the Canadian shore; about 40 feet from the shore and 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 425 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Six miles southeast of Harding, Minn.; on the right bank of Loon River, 2 miles upstream from the narrows between Little Vermilion Lake and Loon River; opposite and 400 feet from the mouth of a large creek on the United States side; close to the shore line and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 426 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Six miles southeast of Harding, Minn.; on the left bank of Loon River about 2 miles upstream from the narrows between Little Vermilion Lake and Loon River; on the high bank on the south side of the mouth of a large creek; close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 427 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—Six and one-half miles southeast of Harding, Minn.; on the right bank of Loon River about 2¼ miles upstream from the narrows between Little Vermilion Lake and Loon River; about midway between 2 creeks on the United States side of the river; and 1,200 feet south of the large creek on the United States side; close to the shore and about 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 428 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—Six and one-half miles southeast of Harding, Minn; on the left bank of Loon River, 2¼ miles upstream from the narrows between Little Vermilion Lake and Loon River, 200 feet south of a small creek on the United States side of the river, and 1,000 feet south of the large creek on the same side; about 40 feet from the shore and 10 feet above the high-water mark.

Reference Monument 429 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).-Six and one-half miles southeast of Harding, Minn.; on the right bank of Loon River about 21/2 miles upstream from the narrows between Little Vermilion Lake and Loon River; on the steep bank opposite a steep bluff on the United States side; 1,000 feet north of a right-angle bend of the river; about 10 feet above the high-water mark and close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 430 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).-Six and one-half miles southeast of Harding, Minn.; on the left bank of Loon River about 21/2 miles upstream from the narrows between Little Vermilion Lake and Loon River, below a steep bluff 800 feet north of a right-angle bend of the river; about 10 feet above the high-water mark and 40 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 431 (Ontario, Rainy River District; J. J. McArthur, 1915).-Six and one-half miles southeast of Harding, Minn.; on the right bank of Loon River about 2¾ miles upstream from the narrows between Little Vermilion Lake and Loon River, 300 feet north from where the river takes a right-angle bend; about 100 feet from the shore and 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 432 (Minnesota, St. Louis County; J. J. McArthur, 1915).-Six and one-half miles southeast of Harding, Minn.; on the left bank of Loon River 23/4 miles upstream from the narrows between Little Vermilion Lake and Loon River; 300 feet north from where the river takes a right-angle bend; about 10 feet above the high-water mark and close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 433 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).-Six and one-half miles southeast of Harding, Minn.; on the right bank of Loon River about 23/4 miles upstream from the narrows between Little Vermilion Lake and Loon River; on the high bank at the point where the river takes a rightangle turn; about 30 feet from the shore and 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 434 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).-Six and one-half miles southeast of Harding, Minn.; on the left bank of Loon River about 2¾ miles from the narrows between Little Vermilion Lake and Loon River; about 150 feet from the mouth of a creek at a right-angle turn of the river, and 50 feet upstream from the nearest part of the creek; about 10 feet above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 435 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).-Six and one-half n:iles southeast of Harding, Minn.; on the right bank of Loon River, 3 miles upstream from the narrows between Little Vermilion Lake and Loon River; 300 feet south of the right-angle bend of the river and 500 feet north of the creek on the United States side; about 90 feet from the shore and 10 feet above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 436 (Minnesota, St. Louis County; J. J. McArthur, 1915, G. T. Prinsep, 1921) .--Six and one-half miles southeast of Harding, Minn.; on the left bank of Loon River, about 3¼ miles upstream from the narrows between Little Vermilion Lake and Loon River; on the steep bank where the river takes an acute-angle bend 700 feet south of a creek on the United States side, 30 feet from the shore and about 15 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place; reset in 1921.

Reference Monument 437 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).-On the right bank of Loon River, 3½ miles upstream from the narrows between Little Vermilion Lake and Loon River; opposite a point on the left shore where the river takes an acute-angle bend and 800 feet north of the mouth of a creek on the left shore at the angle of a right-angle bend; about 30 feet from the shore and 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 438 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).-On the left bank of Loon River, 31/2 miles upstream from the narrows between Little Vermilion Lake and Loon River; about 100 feet upstream from the creek on the United States side at the angle of a right-angle bend of the river; 10 feet from the shore and 5 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 439 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, 3% miles upstream from the narrows between Little Vermilion Lake and Loon River; 200 feet east of a low point on the opposite shore where the river takes an acute-angle bend; close to the shore and a little above the high-water mark.

**Reference Monument 440** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River, 3% miles upstream from the narrows between Little Vermilion Lake and Loon River; just opposite a large swampy point on the right side at a bend of the river; close to the shore and slightly below the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 441 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, 3% miles above the narrows between Little Vermilion Lake and Loon River; 400 feet upstream from the low swampy point and at the east edge of the swamp; about 30 feet from the shore line and close to the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 442** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, 4 miles upstream from the narrows between Little Vermilion Lake and Loon River; about 1,000 feet above the swampy point on the Canadian shore; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 443 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921) —On the right bank of Loon River, 4½ miles upstream from the narrows between Little Vermilion Lake and Loon River, and three-fourths mile downstream from the small rapids; on a rock slope at a turn of the river just below a well-defined gully and creek on the Canadian side; about 15 feet from the shore and 5 feet above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 444** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River, 4½ miles upstream from the narrows between Little Vermilion Lake and Loon River and three-fourths mile downstream from the small rapids; on a turn of the river at a small gully and creek on the United States side; about 100 feet upstream from the creek and close to the shore line and the high-water mark. The monument is about 300 feet south of reference monument 443.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 445** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, 4¾ miles upstream from the narrows between Little Vermilion Lake and Loon River and one-half mile downstream from the small rapids. The monument is beside the riffle and close to the high-water mark and the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 446** (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River, 4¾ miles upstream from the narrows between Little Vermilion Lake and Loon River and one-half mile downstream from the small rapids. The monument is beside the riffle and close to the high-water mark and the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 447** (Ontario, Rainy River District; J. J. McArthur, 1915).—On the right bank of Loon River, 5 miles above the narrows between Little Vermilion Lake and Loon River and one-third mile downstream from the small rapids; 800 feet upstream from the riffle and close to the shore and the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 448 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River a little over 5 miles upstream from the narrows between Little Vermilion Lake and Loon River and 1,000 feet downstream from the small rapids. The monument is on the upper side of a small gorge at a bend of the river, about 50 feet from the mouth of a small creek; close to the shore and a little above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 449 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, about 5¼ miles upstream from the narrows between Little Vermilion Lake and Loon River; 500 feet downstream from the small rapids at the narrow neck of the river; close to the shore and the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 450 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River about 5¼ miles upstream from the narrows between Little Vermilion Lake and Loon River; 200 feet downstream from the small rapids at the narrow neck of the river; close to the shore and the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 451** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River beside the small rapids about 5¼ miles upstream from the narrows between Little Vermilion Lake and Loon River and one-half mile downstream from the portage to Loon Lake; close to the shore.

## APPENDIX V

Reference Monument 452 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River beside the small rapids about 5¼ miles upstream from the narrows between Little Vermilion Lake and Loon River and one-half mile downstream from the portage to Loon Lake; close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 453 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, 300 feet upstream from the small rapids and one-half mile downstream from the portage to Loon Lake; at the shore line.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 454 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River, 300 feet upstream from the small rapids and one-half mile downstream from the portage to Loon Lake; at the shore line.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 455** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River at a bend 500 feet upstream from the small rapids and about one-half mile below the portage to Loon Lake; close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 456 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River about 300 feet upstream from the mouth of a large creek on the same side of the river and close to a small inlet; on a slight rise of the bank, one-third mile below the portage to Loon River; close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 457 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, about one-half mile downstream from the portage to Loon Lake; 150 feet upstream from reference monument 455 and opposite a low marshy point on the opposite shore; at the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 458 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, opposite the mouth of a large creek on the United States side; one-third mile downstream from the portage to Loon River; about 150 feet from the shore and 10 feet above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 459** (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River, 600 feet downstream from the portage to Loon Lake; about 100 feet from the shore and 5 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 460 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of Loon River 600 feet downstream from the portage to Loon Lake; close to the shore and the high-water mark. Station mark: A mauganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 461 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of Loon River at the foot of the rapids between Loon Lake and Loon River.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 462 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the left bank of Loon River at the foot of the rapids between Loon Lake and Loon River; close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Suuton mutut na manganese steme poer, e manes mgaj see na a ana see a prese

Reference Monument 463 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of the rapids between Loon Lake and Loon River, 300 feet above the foot of the rapids; close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 464 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of the rapids between Loon Lake and Loon River, 300 feet above the foot of the rapids; close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 465 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the right bank of the rapids between Loon Lake and Loon River, 350 feet below the dam at the head of the rapids; close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 466 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the left bank of the rapids between Loon Lake and Loon River, 200 feet below the dam at the head of the rapids; close to the shore.

Reference Monument 467 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the north shore of Loon Lake at the head of the rapids in Loon River; about 10 feet east of the north end of the dam, close to the shore and a little below the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 468 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—At the east end of the portage between Loon Lake and Loon River, 50 feet from the shore of the lake and the same distance from the left bank of the rapids.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place

Reference Monument 469 (Ontario, Rainy River District; J. J. McArthur, 1915; 1921).—On the north shore of Loon Lake, nearly one-half mile from the east end of the portage to Loon River, on the west side of a small bay; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 470 (Minnesota, St. Louis County; J. J. McArthur, 1915; 1921).—On the south side of the west arm of Loon Lake on a rock ledge about one-fourth mile east of the portage to Loon River; close to the shore and about 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 471 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the north shore of the west arm of Loon Lake, about one-half mile from the portage to Loon River; on the west side of a small bay, 800 feet north of reference monument 469.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 472 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the south shore of the west arm of Loon Lake, about three-fourths mile from the portage to Loon River, at a place where the lake is only about 400 feet wide.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 473 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the north side of the west arm of Loon Lake, nearly a mile from the portage to Loon River, on a knoll about 30 feet above the high-water mark and 100 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 474** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the south side of the west arm of Loon Lake, nearly a mile from the portage to Loon River and just east of a small bay; 10 or 20 feet above the high-water mark and about 100 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 475 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the north shore of the west arm of Loon Lake, nearly 1½ miles from the portage to Loon River, 800 feet north of a prominent point on the opposite shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 476 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the south shore of the west arm of Loon Lake, about 1¼ miles from the east end of the portage to Loon River and 500 feet west of the end of the prominent point on the same side of the lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 477 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the top of the hill on the prominent point on the Canadian side of Loon Lake, where the channel takes a right-angle bend. The point is east of the large bay on the north side of the channel and is 2 miles south of the portage to Lac La Croix and  $2\frac{1}{2}$  miles east of the portage to Loon River.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 478 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On a small island in Loon Lake, about 2¾ miles east of the portage to Loon River and 2¾ miles south of the portage to Lac La Croix; 400 feet east of a large island near the United States shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 479** (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the east shore of the north arm of Loon Lake, 3 miles east of the portage to Loon River and 2½ miles south of the portage to Lac La Croix; about 2,000 feet east of reference monument 477.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 480 (Minnesota, St. Louis County; J. J. McArthur, 1915).—On a point of the east shore of the north arm of Loon Lake, about 3 miles northeast of the portage to Loon River and 1½ miles south of the portage to Lac La Croix; 1,200 feet east of the large island in the middle of the channel.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

96030-31-27

Reference Monument 481 (Ontario, Rainy River District; J. J. McArthur, 1915).—On the west side of the north arm of Loon Lake, about 3½ miles northeast of the portage to Loon River, and 1¾ miles south of the portage to Lac La Croix. The monument is about 100 feet from the shore and 20 feet above the high-water mark and about halfway up the side of the hill.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 482** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On a good-sized island in the north arm of Loon Lake, about 3 miles northeast of the portage to Loon River, and 1¼ miles south of the portage to Lac La Croix; on the western end of the top of the hill, 100 feet from the shore and 20 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 483 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a point of the west shore of the north arm of Loon Lake, about 3 miles northeast of the portage to Loon River and 1¼ miles south of the portage to Lac La Croix, 800 feet southwest of the large island in the middle of the channel; on a small knoll close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 484 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the east side of the north arm of Loon Lake, where the lake is about 800 feet wide; 3 miles northeast from the portage to Loon River and three-fourths mile south of the portage to Lac La Croix; 200 feet from the shore and 30 or 40 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 485 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the west side of the north arm of Loon Lake, where the lake is about 800 feet wide; 3 miles northeast of the portage to Loon River and three-fourths mile south of the portage to Lac La Croix; one-half mile northwest of reference monument 482; 100 feet from the shore and 10 or 20 feet above the high-water mark. Near the south end of a long ridge. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 486 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the east side of the north arm of Loon Lake, on the side of the hill on the point one-fourth mile south of the portage to Lac La Croix; about 100 feet from the shore at the north shoulder of the point and 25 feet above the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 487** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the west side of the north arm of Loon Lake, about one-half mile south of the portage to Lac La Croix on a rock outcrop on the side of the hill; about 200 feet from the shore and 100 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 488 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the east side of the north arm of Loon Lake, 600 feet south of the portage to Lac La Croix; on a rock outcrop on the side of the hill, about 100 feet from the shore and 35 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 489 (Ontario, Rainy River District; J. J. McArthur, 1916: 1921).—On the south shore of the most northern tip of the north arm of Loon Lake, about 100 feet from the rapids from Lac La Croix. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 490** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the portage between Loon Lake and Lac La Croix, about 150 feet from the Loon Lake end of the portage and 50 feet from the left bank of the east stream; about 10 feet above the level of Loon Lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 491 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—Near the portage between Loon Lake and Lac La Croix, on the right bank of the west stream about 150 feet from the end of Loon Lake; about 10 feet above the level of Loon Lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 492** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the portage between Loon Lake and Lac La Croix, on the left bank of the stream about 200 feet south of the end of Lac La Croix; near the same elevation as the water surface of Lac La Croix.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 493 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—Near the portage between Loon Lake and Lac La Croix, on the right bank of the west stream about 250 feet from Lac La Croix and 100 feet south of the junction with the east stream, just above a sharp drop of the stream; about 10 feet below the level of Lac La Croix.

Reference Monument 494 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921) .- On the portage between Loon Lake and Lac La Croix, on a knoll at the left side of the stream; 5 or 10 feet above the level of Lac La Croix.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 495 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).-Near the portage between Loon Lake and Lac La Croix, on the right side of the stream; close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 496 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On the east side of Lac La Croix on the top of the cliff 200 feet north of the portage to Loon Lake; close to the edge of the cliff, 150 feet from shore and 100 feet above the level of the lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 497 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On the west side of Lac La Croix, 600 feet west of the stream at the portage to Loon Lake, on the northern part of the top of a hill and 300 feet from a point on the shore where there is a bowlder about 15 feet high. The monument is 60 feet above the level of the lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 498 (Ontario, Rainy River District; J. J. McArthur, 1916).-On the west shore of Lac La Croix, one-half mile north of the portage to Loon Lake; 500 feet from the end of a long point, opposite reference monument 500.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 499 (Ontario, Rainy River District; J. J. McArthur, 1916) .-- On the west shore of Lac La Croix, 1 mile north of the portage to Loon Lake; on the shore line below the cliff.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 500 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On a cliff on the east side of Lac La Croix, one-half mile north of the portage to Loon Lake; about 100 feet above the level of the lake and 200 feet from the shore; opposite the long point on the west shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 501 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On an island in Lac La Croix about 1,000 feet in diameter, the most southern of the group; 2 miles north of the portage to Loon Lake, at the entrance to a large bay to the west; on a knoll at the southeast end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 502 (Minnesota, St. Louis County; J. J. McArthur, 1916).-On a small island in Lac La Croix, 2 miles north of the portage to Loon Lake, 800 feet from the United States mainland; nearly onehalf mile southeast of reference monument 501.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 503 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On a small narrow island in Lac La Croix, 2½ miles north of the portage to Loon Lake, at the entrance to a large bay to the west. The monument is midway between the islands which are the sites of reference monuments 501 and 504.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 504 (Minnesota, St. Louis County; J. J. McArthur, 1916).-On a large island in Lac La Croix, 2% miles north of the portage to Loon Lake, at the entrance to a large bay to the west and onethird mile south of the peninsula at the east end of the bay. The monument is near the western extremity of the south end of the island and one-third mile north of reference monument 501; close to the shore and about 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 505 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).-On an island, about 1,000 feet long by 500 feet wide, in Lac La Croix, nearly 3 miles north of the portage to Loon Lake, one-half mile northwest of the most southern island of the group; at the entrance to a large bay to the west; on the most eastern part of the island; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 506 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).-On an island in Lac La Croix about 300 feet long; 200 feet west of the large island which is the site of reference monument 504; one-third mile north of reference monument 504 and nearly 3 miles north of the portage to Loon Lake. The monument is on the west end of the island.

Reference Monument 507 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921) .- On an island about 700 feet long, in Lac La Croix, 3 miles north of the portage to Loon Lake; near the middle of the entrance to the large bay to the west; one-third mile west of the north end of the large island, which is the site of reference monument 504; on a small knoll at the north end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 508 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921) .- On a small rocky island in Lac La Croix, a little over 3 miles north of the portage to Loon Lake, 100 feet north of the large island which is the site of reference monument 504, and 1,500 feet south of the long point between the large bay to the west and the main channel of Lac La Croix.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 509 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On the Canadian shore of Lac La Croix, on the point at the north side of the entrance to Wilkins Bay, the large bay to the west. The monument is 3½ miles north of the portage to Loon Lake, on top of the knoll at the southeastern end of the point; about 30 feet above the high-water mark and 150 feet from the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 510 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On a small island in Lac La Croix east of the point at the north side of the entrance to Wilkins Bay, the large bay to the west. The monument is 3½ miles north of the portage to Loon Lake.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 511 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On a prominent point on the west shore of Lac La Croix, 4½ miles north of the portage to Loon Lake, opposite the south side of the entrance to Snow Bay, the large bay to the east. The monument is close to the shore and the high-water mark. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 512 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On a small island in Lac La Croix, 41/2 miles north of the portage to Loon Lake, 300 feet west of the point at the south side of the entrance to Snow Bay, the large bay to the east. The monument is on the highest part of the island. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 513 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On a prominent point on the west shore of Lac La Croix, 5 miles north of the portage to Loon Lake; opposite the large island at the north side of Snow Bay, the large bay to the east; three-fourths mile southwest of the dome-shaped island at the west bend of the lake; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 514 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On the large island in Lac La Croix, 5 miles north of the portage to Loon Lake, at the north side of the entrance to Snow Bay, the large bay to the east; on the west point of the island, 400 feet north of a small narrow island; one-half mile south of the dome-shaped island at the west bend of the lake; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 515 (Ontario, Rainy River District; J. J. McArthur, 1916) .- On the most eastern of a small group of islands one-half mile northeast of the dome-shaped island at the west bend of Lac La Croix; 6 miles north of the portage to Loon Lake. The monument is at the east end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 516 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On the south shore of Lac La Croix, one-third mile southeast of the dome-shaped island at the west bend of the lake, 6 miles north of the portage to Loon Lake. The monument is 1,000 feet from the west and 500 feet from the east point. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 517 (Ontario, Rainy River District; J. J. McArthur, 1916).-On a prominent point on the north shore of Lac La Croix, about 1¼ miles east of the west bend of the lake. There is a deep narrow bay to the northwest of the point and a much longer one to the east.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 518 (Minnesota, St. Louis County; J. J. McArthur, 1916).-On a rugged cliff point on the south shore of Lac La Croix, three-fourths mile southwest of the dome-shaped island in the middle of the channel; 1 mile east of the west bend of the lake. The monument is at the west end of the point. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 519 (Ontario, Rainy River District; J. J. McArthur, 1916).-On the north shore of Lac La Croix, one-third mile east of the dome-shaped island that is 2 miles east of the west bend of the lake. The monument is 300 feet west of a small bay.

Reference Monument 520 (Minnesota, St. Louis County; J. J. McArthur, 1916) .-- On the most western island of a large group, 21/2 miles east of the west bend of Lac La Croix and one-half mile southeast of a domeshaped island in the middle of the channel. The monument is on the north side of the island, 400 feet west of a small adjacent island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 521 (Ontario, Rainy River District; J. J. McArthur, 1916).-On one of the islands at the east end of the large group, 2% miles east of the west bend of Lac La Croix; three-fourths mile southeast of a dome-shaped island in the middle of the channel. The monument is on a slight eminence at the west end of the island and is 1,500 feet east of reference monument 520.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 522 (Minnesota, St. Louis County; J. J. McArthur, 1916) .- On a small island between the two large islands of the large group, 23/4 miles east of the west bend of Lac La Croix, on which reference monuments 520 and 521 are situated. The monument is at the north end of the most western of three small islands and about 600 feet south of reference monument 521.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 523 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).-On a slight eminence on the west end of the island just east of the narrows between two islands; 150 feet east of the most western island of the large group in Lac La Croix, 3 miles east of the west bend of the lake. The channel to the west is shallow and about 75 feet wide and that to the north is deeper and about 200 feet wide; reference monument 524 is about 150 feet to the west.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 524 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the east end of the most western island of a large group in Lac La Croix, 3 miles east of the west bend of the lake. The monument is on a slight eminence on the same island as reference monument 520 and is about 150 feet west of reference monument 523 on the adjacent island to the east.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 525 (Ontario, Rainy River District; J. J. McArthur, 1916).-On the southwest side of the island just east of the narrows between two islands; 150 feet east of the most western island of the large group in Lac La Croix, 3 miles east of the west bend of the lake. The monument is on the same island as reference monument 523, 300 feet southeast from reference monument 523, and close to the shore. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 526 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On Fortyone Island, a large island of the large group in Lac La Croix, 3 miles east of the west bend of the lake. The monument is on a rock outcrop near the northwest part of the island and is about 500 feet south of reference monument 525. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 527 (Ontario, Rainy River District; J. J. McArthur, 1916).-Near the southeast point of Fortyfive Island, one of the most western islands of the large group in Lac La Croix; 3¼ miles east of the west bend of the lake, 1½ miles southeast of the dome-shaped island in the middle of the channel; on the south side of and 200 feet from the end of the point. The monument is on the same island as reference monuments 521 and 531, and 500 feet southwest of the latter.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 528 (Minnesota, St. Louis County; J. J. McArthur, 1916).-On Fortyone Island, a large island of the large group in Lac La Croix; 3¼ miles east of the west bend of the lake. The monument is about 200 feet east of a small bay in the north end of the island and is about midway between reference monuments 526 and 529 on the same island, and about 1,000 feet southwest of reference monument 527; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 529 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).-On Fortyone Island, a large island of the large group in Lac La Croix; 3½ miles east of the west bend of the lake. The monument is 300 feet west of the end of the point north of a swampy bay and 200 feet southeast of a low island about 400 feet long in an east and west direction; close to the shore and the high-water mark. Reference monuments 526 and 528 are on the same island and reference monument 527 is about 1,000 feet to the northwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 530 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).-On one of the islands of the large group in Lac La Croix, 3½ miles east of the west bend of the lake. This island is due east of the island on which are situated reference monuments 521, 527, and 531, and the monument is 550 feet southeast of reference monument 531.

**Reference Monument 531** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the east end of Fortyfive Island, one of the most western islands of a large group in Lac La Croix, 3½ miles east of the west bend of the lake, 1½ miles southeast of the dome-shaped island in the middle of the channel. Reference monuments 521 and 527 are on the same island, the latter 500 feet in a southwesterly direction.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 532 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On an eminence at the north end of a large island in the large group in Lac La Croix, 3<sup>3</sup>/<sub>4</sub> miles east of the west bend of the lake, one-half mile east of reference monument 531, and one-third mile south of reference monument 533. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 533 (Ontario, Rainy River District; J. J. McArthur, 1916).—On an island 200 feet from the north shore of Lac La Croix, 4 miles east of the west bend of the lake and 2 miles southwest of the entrance to Namakan River. The island is about 1,200 feet long, and the monument is on the side of the hill, about 100 feet from the shore at the southeast end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 534** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On one of the small islands of the large group in Lac La Croix, 4 miles east of the west bend of the lake and 2 miles southwest of the entrance to Namakan River. This island is about 20 feet north of the middle of the island, about 1 mile long in an east and west direction, on which reference monuments 532 and 536 are situated. The monument is on the northeastern part of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 535 (Ontario, Rainy River District; J. J. McArthur, 1916).—On a small island in the large group in Lac La Croix, 4 miles east of the west bend of the lake and 2 miles southwest of the entrance to Namakan River. The island is circular in shape and about 100 feet in diameter and is 700 feet northeast of reference monument 532 and 1,300 feet southeast of reference monument 533.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 536** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the north side of a large island in the large group in Lac La Croix, 4 miles east of the west bend of the lake and 2 miles southwest of the entrance to Namakan River. The monument is on the north shore of the point extending west from the eastern part of the island, about 300 feet from the west end of the point. Reference monument 532 is on the same island 2,000 feet west; reference monument 534 is about 1,000 feet west.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 537 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small island of the large group in Lac La Croix, 4 miles east of the west bend of the lake and 2 miles southwest of the entrance to Namakan River, 400 feet north of reference monument 534 and 1,500 feet east of reference monument 532. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 538 (Ontario, Rainy River District; J. J. McArthur, 1916).—On one of the islands of the large group in Lac La Croix, 4 miles east of the west bend of the lake and 2 miles southwest of the entrance to Namakan River, 400 feet northwest of reference monument 536; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 539 (Ontario, Rainy River District; J. J. McArthur, 1916).—On one of the islands in the large group in Lac La Croix,  $4\frac{1}{2}$  miles east of the west bend of the lake and  $1\frac{1}{2}$  miles southwest of the entrance to Namakan River. The island is about 300 feet in diameter and is 1,000 feet southwest of the southwest point of the island on which reference monument 544 is situated. The monument is close to the shore on the southeast end of the island, 450 feet northwest of reference monument 540 and 500 feet south of reference monument 541.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 540** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On an island one-fourth mile long in the large group in Lac La Croix, 4½ miles east of the west bend of the lake and 1½ miles southwest of the entrance to Namakan River. The island is 1,000 feet northeast of the east end of the long island on which reference monuments 532 and 536 are situated. The monument is at the north end of the island and is 450 feet southeast of reference monument 539.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 541** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On one of the islands in the large group in Lac La Croix, 4½ miles east of the west bend of the lake and 1½ miles southwest of the entrance to Namakan River. The island is about 300 feet long and is 800 feet southwest of the southwest point of the island on which reference monument 544 is situated. The monument is on the east end of the island, 500 feet north of reference monument 539 and 500 feet northwest of reference monument 542.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 542 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On one of the small islands of the large group in Lac La Croix, 4½ miles east of the west bend of the lake and 1½ miles southwest of the entrance to Namakan River. The island is about 100 feet in diameter and is 700 feet south of the southwest point of the island on which reference monument 544 is situated. The monument is on the highest part of the island, 500 feet north of reference monument 540 and 500 feet southeast of reference monument 541. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 543 (Ontario, Rainy River District; J. J. McArthur, 1916).—On a small island in the large group in Lac La Croix,  $4\frac{1}{2}$  miles east of the west bend of the lake and  $1\frac{1}{3}$  miles southwest of the entrance to Namakan River. The island is about 200 feet long and is 1,000 feet west of reference monument 544. The monument is near the center of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 544 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On one of the islands of the large group in Lac La Croix, 4½ miles east of the west bend of the lake and 1 mile southwest of the entrance to Namakan River. The island is about one-half mile long and just west of the large island two-thirds mile south of the entrance to Namakan River. The monument is on the northwest point of the island. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 545** (Ontario, Rainy River District; J. J. McArthur, 1916).—On a small island three-fourths mile southwest of the entrance to Namakan River, one-third mile northeast of reference monument 544 and one-half mile west of reference monument 546.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 546 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the most northern point of Twentyseven Island, the large island, about a mile long and three-fourths mile wide, one-half mile due south of the entrance to Namakan River. The monument is close to the shore.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 547** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the island about 1,000 feet long, 1,000 feet south of the entrance to Namakan River. The monument is at the head of the west bay on the south side of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 548 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of Lac La Croix, one-third mile east of the east side of the entrance to Namakan River. The monument is close to the shore about 300 feet east of the place where the high bank leaves the shore and runs in a northerly direction. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 549** (Ontario, Rainy River District; J. J. McArthur, 1916).—On Twentysix Island, an island in Lac La Croix, 1 mile southeast of the entrance to Namakan River and one-fourth mile east of the northeast point of Twentyseven Island, the large island one-half mile due south of the entrance to Namakan River. The monument is close to the shore about 100 feet south of the more southern of two small bays on the northeast side of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 550** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On Twentyseven Island, the large island in Lac La Croix, one-half mile due south of the entrance to Namakan River; on the east side of the island, about 200 feet north of the shoulder of the most southern of two points, two-thirds mile southwest of reference monument 549. Reference monument 546 is on the northwest point of the same island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 551** (Ontario, Rainy River District; J. J. McArthur, 1916).—On a small lone island in the big stretch of Lac La Croix, 3 miles east of the entrance to Namakan River and two-thirds mile southeast of a prominent bluff on Indian Island, the large island on the Canadian side.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 552 (Minnesota, St. Louis County; J. J. McArthur 1916).—On a large low island in Lac La Croix, 3 miles east of the entrance to Namakan River, the most western of the group, east of the big stretch of open water and due north of the channel west of Coleman Island. The monument is on the north point of the island, west of a large bay, and is three-fourths mile south of reference monument 551. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place. Reference Monument 553 (Ontario, Rainy River District; J. J. McArthur, 1916).—On Twentyfour Island, a large low island in Lac La Croix, the most northern of the group 3 miles east of the entrance to Namakan River and east of the big stretch of open water, one-half mile northeast of the island that reference monument 552 is situated on. The monument is on the shore, north of the bay at the southwest end of the island. Reference monuments 555 and 557 are on the same island, and reference monument 551 is two-thirds mile to the northwest Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 554** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On Twentyfive Island, the next island east of the island that reference monument 552 is situated on. The monument is on the point on which there is a small knoll, on the northwest corner of the island. Reference monument 552 is nearly one-half mile west and reference monument 553 about one-third mile northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 555 (Ontario, Rainy River District; J. J. McArthur, 1916).—On Twentyfour Island, a large low island in Lac La Croix, the most northern of the group, 3 miles east of the entrance to Namakan River, just east of the big stretch of open water and one-half mile southwest of a swampy point of the north shore. The monument is on the southeast point of the island. Reference monument 553 is on the same island 1,000 feet to the northwest and reference monument 557 on the same island 2,300 feet to the northeast. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 556 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a very small island in Lac La Croix, 1,000 feet south of reference monument 555 and 2,000 feet southwest of reference monument 558.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 557** (Ontario, Rainy River District; J. J. McArthur, 1916).—On Twentyfour Island, a large low island in Lac La Croix, the most northern of the group 3 miles east of the entrance to Namakan River, just east of the big stretch of open water and one-half mile southwest of a swampy point of the north shore. The monument is on the northeast point of the island. Reference monuments 553 and 555 are on the south end of the same island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 558** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the large island north of Coleman Island, at the east bend of Lac La Croix, about 2 miles west of the mouth of Maligne River. The monument is on the long low point on the west side of the island. Reference monuments 560 and 562 are on the same island. Reference monument 555 is 2,000 feet west and reference monument 556 is 2,000 feet southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 559** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small island 300 feet north of the large island north of Coleman Island, at the east bend of Lac La Croix and about 1,000 feet south of the low swampy point of the north shore. The monument is at the north end of the island and reference monument 560 is about 600 feet southeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 560 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the point at the north end of the large island north of Coleman Island, at the east bend of Lac La Croix, one-fourth mile south of the low swampy point on the north shore; the monument is at the east end of the point.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place; replaced in 1921.

**Reference Monument 561** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of Lac La Croix, two-thirds mile east of the low swampy point at the east bend of the lake and north of Coleman Island. The monument is close to the shore at the southwest base of the hill on the shoulder of the point. There is a small island one-fourth mile to the eastward, and the narrows at the mouth of Maligne River are about a mile to the eastward. Reference monument 560 is three-fourths mile southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 562 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the northeast point of the large island north of Coleman Island, at the east bend of Lac La Croix; on the same island as, and one-third mile southeast of, reference monument 560.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 563 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small L-shaped island in Lac La Croix one-half mile east of the north end of Coleman Island and three-fourths mile southeast of reference monument 562. The monument is close to the shore and 200 feet north of the southwest end of the island. Reference monument 564 is 1,000 feet to the west.

**Reference Monument 564** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On an island in Lac La Croix just east of the most northern point of Coleman Island and two-thirds mile southeast of reference monument 562. The monument is on the most eastern point of the island. Reference monument 563 is 1,000 feet to the eastward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 565 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small island in Lac La Croix one-half mile southeast of the north point of Coleman Island and about one-half mile south of reference monument 563. The monument is on top of the bank, on the north side of the island. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 566 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the east side of Coleman Island, one-half mile south of the north point of the island and 1,000 feet west of reference monument 565. The monument is close to the shore, on a small point 300 feet southwest of a group of small islands. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 567** (Ontario, Rainy River District; J. J. McArthur, 1916).—On a small island in Lac La Croix east of Coleman Island, 1,000 feet north of the peninsula that is a mile southeast of the north end of Coleman Island. There are two small islands about 200 feet apart, and the monument is on the west end of the east island. There is a long narrow precipitous island about 1,000 feet to the eastward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 568** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a very small rocky island in Lac La Croix close to the shore of the north side of the peninsula a mile southeast of the north end of Coleman Island. There is a low point about 500 feet to the eastward and reference monument 567 is about one-fourth mile to the northeastward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 569** (Ontario, Rainy River District; J. J. McArthur, 1916).—On a very small island in Lac La Croix about a mile southeast of the north end of Coleman Island; just south of a small island about 200 feet long and 1,000 feet south of the middle part of a long narrow precipitous island. Reference monument 567 is about one-fourth mile to the northwestward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 570 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the northeast end of the peninsula, and a mile southeast of the north end of Coleman Island, in Lac La Croix. Reference monument 569 is about 1,000 feet to the northeastward and reference monument 567 is one-fourth mile to the northwestward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 571 (Ontario, Rainy River District; J. J. McArthur, 1916).—On an island about one-half mile long in Lac La Croix, 500 feet east of the peninsula a mile southeast of the north end of Coleman Island. The monument is on a small cliff south of a bay. Reference monument 572 is 500 feet to the westward. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 572** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a small point on the east side of the peninsula on the east side of, and a mile southeast of, the north end of Coleman Island in Lac La Croix. The monument is 500 feet northwest of a small island in the narrows. Reference monument 571 is 500 feet to the northeastward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 573** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small island in Lac La Croix at the south end of the narrows off the peninsula on the east side of, and a mile southeast of the north end of Coleman Island. The island is near a bay at the southwest end of the large island and is about 500 feet east of a group of small islands.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 574 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the east side of the peninsula a mile southeast of the north end of Coleman Island, in Lac La Croix; opposite a group of small islands at the south end of the narrows; close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 575 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the south end of the island about one-half mile long, east of the peninsula a mile southeast of the north end of Coleman Island; in Lac La Croix; 400 feet west of the point at the southeast end of the island.

Reference Monument 576 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a small island in Lac La Croix one-third mile southeast of the peninsula that is a mile southeast of the north end of Coleman Island. The monument is one-third mile southeast of reference monument 574 and one-third mile southwest of reference monument 575.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 577 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the most southern island of a group south of the prominent point on the east shore of Lac La Croix, 1½ miles southeast of the north end of Coleman Island and one-third mile southeast of a long narrow precipitous island. The monument is on the south side of the island. Reference monument 575 is one-half mile to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 578 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a point of, and 2 miles southeast from, the north point of Coleman Island, in Lac La Croix; 1,500 feet south of reference monument 577. The monument is close to the shore and the high water mark, on the west side of the bay just west of the narrows.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 579 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the large island in the narrows between the east shore of Lac La Croix and Coleman Island, 2½ miles southeast of the north end of Coleman Island. The monument is on the southwest slope of the island, about 200 feet from the shore and 20 or 30 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 580** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On a point of Coleman Island in Lac La Croix, on the south side and west end of the south narrows  $2\frac{1}{2}$  miles southeast of the north end of Coleman Island. The monument is on the east side of the bay that reference monument 578 is on the west side of, and is nearly one-half mile from reference monument 578. Reference monument 579 is about 650 feet to the north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 581 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of Lac La Croix at the east end of the narrows nearly 3 miles southeast of the north end of Coleman Island. The monument is close to the shore at a right angle of the shore line, the sides of which go north and east from the monument. There is a long low point 600 feet east of the monument.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 582** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the most eastern peninsula of Coleman Island, in Lae La Croix, at the east end of the south narrows nearly 3 miles southeast of the north end of Coleman Island, about 600 feet from the southeast point of the big island in the narrows. Reference monument 581 is about one-third mile to the northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 583 (Ontario, Rainy River District; J. J. McArthur, 1916).—On an island about 200 feet long, in Lac La Croix, one-half mile southeast of the narrows that are 2½ miles southeast of the north end of Lac La Croix. There are two larger islands about 1,000 feet distant, one to the east and the other to the northeast. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 584** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a point of Coleman Island in Lac La Croix about one-third mile south of the narrows that are  $2\frac{1}{2}$  miles southeast of the north end of Coleman Island. The shore here forms a rough right angle, the sides of which go north and west from the monument. Reference monument 583 is about 1,500 feet to the eastward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 585** (Ontario, Rainy River District; J. J. McArthur, 1916).—On an island about 700 feet in diameter, in Lac La Croix, two-thirds mile south of the narrows that are  $2\frac{1}{2}$  miles southeast of the north end of Coleman Island. The monument is on the west side of the island, which is the most western of a group. Reference monument 584 is about one-third mile to the northward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 586 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a small rocky island in Lac La Croix, about one-half mile south of the narrows that are 2½ miles southeast of the north end of Coleman Island. The monument is about 800 feet from the shore of Coleman Island. Reference monument 585 is one-third mile southeast.

Reference Monument 587 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small island in Lac La Croix 300 feet from the east shore of the lake and about a mile due east of the narrows at the south end of Coleman Island. Reference monument 586 is 1¼ miles due north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 588** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the east side of Coleman Island, in Lac La Croix, just south of the south point of the bay that is 1 mile northeast from the narrows at the south end of Coleman Island. Reference monument 586 is two-thirds mile to the northeast and reference monument 587 is three-fourths mile to the southeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 589 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On an island in Lac La Croix one-half mile east of the narrows at the south end of Coleman Island. The monument is on the extreme east end of the island, and there is another island about 400 feet northeast from it. Reference monument 587 is nearly one-half mile distant in an easterly direction.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 590 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a point of the west shore of Lac La Croix in the narrows about a mile south of the south end of Coleman Island, and 3 miles north of the mouth of Bottle River. Reference monument 587 is about one-half mile northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 591 (Ontario, Rainy River District; J. J. McArthur, 1916).—On a point of the east shore of Lac La Croix in the narrows about a mile south of the south end of Coleman Island, and 3 miles north of the mouth of Bottle River. Reference Monument 590 is about 800 feet distant on the opposite point. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 592** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the most eastern point of a large hilly island in Lac La Croix, one-half mile south of the narrows south of Coleman Island, and nearly 3 miles north of the mouth of Bottle River. There is another point 1,000 feet south of the monument. Reference monument 591 is about one-half mile due north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 593 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the east shore of Lac La Croix, one-half mile south of the narrows south of Coleman Island, and nearly 3 miles north of the mouth of Bottle River. About 1,000 feet to the north is a cliff at the shore line on which are some Indian paintings. Between the cliff and the monument is a deep bay. Reference monument 592 is about one-third mile to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 594** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a very small island in Lac La Croix, 1½ miles south of the narrows south of Coleman Island, and about 2 miles north of the mouth of Bottle River. There are other islands about 1,000 feet to the south, west, and north. Reference monument 592 is a mile due north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 595** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the east shore of Lac La Croix, at a right angle of the shore line, where the shore goes north and east from the monument, 1<sup>1</sup>/<sub>3</sub> miles south of the narrows south of Coleman Island, and 2 miles north of the mouth of Bottle River. There is a prominent point on the same shore 1,000 feet to the north and a small island about the same distance to the south. Reference monument 594 is about one-half mile to the southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 596** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On an island in Lac La Croix a little over 2 miles south of the narrows south of Coleman Island, and about a mile north of the mouth of Bottle River. The island is about 500 feet long and is between two much larger islands to the east and west. A peninsula on the north side of the channel is about 1,000 feet to the northeast. The monument is on the north-east end of the island, and there is a small island 300 feet to the west.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 597 (Ontario, Rainy River District; J. J. McArthur, 1916).—On a very small island in Lac La Croix, 1¼ miles south of the narrows south of Coleman Island, and 1½ miles north of the mouth of Bottle River, which is at the southeast end of the lake. There are two small islands about 1,000 feet north and a large one about the same distance south. Reference monument 596 is about one-third mile to the southeast. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place. Reference Monument 598 (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the northeast end of an island in Lac La Croix. The island is about three-fourths mile long; it is about 2½ miles south of the narrows south of Coleman Island, and a mile northwest of the mouth of Bottle River which is at the southeast end of the lake; the peninsula on which reference monument 599 is situated is about 1,000 feet north. Reference monument 596 is about 1,000 feet distant in a westerly direction.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 599 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the southeast end of the peninsula on the Canadian shore, about 2½ miles southeast of the narrows that are south of Coleman Island, and a mile northwest of the mouth of Bottle River, which is at the southeast end of the lake. There is a small island about 1,000 feet to the southeast, and reference monument 598 is 1,000 feet southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 600** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On a small rocky island to the west of the mouth of Bottle River, at the southeast end of Lac La Croix, 100 feet from the south shore and 400 feet from the southwest point of the large island at the mouth of Bottle River. The monument is on the east end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 601** (Ontario, Rainy River District; J. J. McArthur 1916; 1921).—On the southwest point of the large island at the mouth of Bottle River at the southeast end of Lac La Croix; about 400 feet east of reference monument 600.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 602 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the west shore of Bottle River, 200 feet from the southeast end of the large island at the mouth of the river. The monument is close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 603** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the southeast end of the large island at the mouth of Bottle River, on a small rise just above the high-water mark and close to the shore. Reference monument 602 is about 270 feet to the south.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 604** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the west shore of Bottle River, 350 feet south of the southeast end of the large island at the mouth of the river; about 20 feet from the shore. Reference monument 602 is about 140 feet to the northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 605** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the shore at the southeast end of Lac La Croix just east of the mouth of Bottle River, and 300 feet from the southeast end of the large island at the mouth of Bottle River; 30 feet from the shore line and close to the high-water mark. Reference monument 602 is about 340 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 606** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the left bank of Bottle River, 400 feet from the mouth of the river; close to the high-water mark and at the edge of the stony bed of the river. Reference monument 604 is about 200 feet to the north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 607 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right bank of Bottle River, 300 feet from the mouth of the river; about 30 feet east of the stony bed of the river and close to the high-water mark to the south. Reference monument 604 is about 150 feet to the northeast. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 608 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the left bank of Bottle River, 600 feet from the mouth of the river, on a rock outcrop on the shore of the pool between two parts of the river where the bottom is very stony and comparatively dry. Reference monument 606 is about 240

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 609** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right bank of Bottle River, 400 feet from the mouth of the river, just above the high-water mark at the edge of the stony bed of the river. The high-water mark turns here from a westerly to a northerly direction. Reference monument 606 is about 100 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

412

feet to the northwest.

**Reference Monument 610** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the left bank of Bottle River, 100 feet south of the stony bed of the river between the two expansions of the river; about 50 feet from the shore and 15 feet above the high-water mark. Reference monument 608 is about 650 feet to the northwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 611** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right side of Bottle River, 200 feet north of the angle of the shore line in the most southern expansion of the river; 15 or 20 feet above the high-water mark. Reference monument 610 is about 400 feet to the southeast and reference monument 608 about 430 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 612** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the left bank of Bottle River at the north end of the stony bed of the river between the two expansions of the river. Reference monument 610 is about 770 feet to the southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 613 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right bank of Bottle River, at the north end of the narrow stony part between the two expansions of the river. Reference monument 612 is about 170 feet east and reference monument 605 about 420 feet northwest. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 614 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the left bank of Bottle River, 300 feet south of the north end of the northern expansion of the river, at the south end of the low ridge above the rocky shore. Reference monument 612 is one-fourth mile to the southwest. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 615 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right bank of Bottle River at a right-angle turn of the high-water mark one-fourth mile south of the head of the river and 500 feet northwest of the northern expansion of the river. Reference monument 614 is 800 feet to the southeast. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 616 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the left side of Bottle River, on a knoll at a bend of the river 900 feet south of the head of the river. The monument is about 100 feet from the shore and 20 feet above the level of the river. Reference monument 615 is about 300 feet due south.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 617** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right side of Bottle River, on a small cliff at a bend of the river about 1,000 feet south of the head of the river. The monument is about 100 feet from the shore and 20 feet above the level of the river. Reference monument 616 is about 300 feet to the eastward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 618 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the left bank of Bottle River on a ridge at the head of the river 300 feet southwest of the cliff on the south shore of Iron Lake and about 10 feet above the level of the lake. Reference monument 616 is about 800 feet south. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 619 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the right side of Bottle River, 400 feet southwest of the head of the river, on the hillside 100 feet from and 30 feet above the river. Reference monument 618 is about 400 feet east.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 620** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the south shore of the northwest arm of Iron Lake, at the foot and just east of the cliff near the entrance to Bottle River. The monument is near high-water level and about 800 feet southeast of Bottle Portage. Reference monument 618 is about 350 feet southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 621 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the right bank of Bottle River, 200 feet from the head of the river, a little below the level of Iron Lake. Reference monument 618 is about 200 feet east.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 622 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of the northwest arm of Iron Lake, on top of the cliff opposite the entrance to Bottle River, about 100 feet from and 35 feet above the lake; about 500 feet east of Bottle Portage. Reference monument 620 is about 500 feet south.

Station mark: A manganese-bronze post, S inches high, set in a drill hole in rock in place.

Reference Monument 623 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of the northwest arm of Iron Lake and one-half mile east of Bottle Portage and Bottle River. The monument is on top of a very large boulder. Reference monument 622 is about one-half mile due west.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 624 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the south shore of the northwest arm of Iron Lake, 400 feet east of the end of the point one-half mile east of Bottle Portage; close to the shore and the high-water mark. Reference monument 623 is 700 feet north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 625 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the north shore of the northwest arm of Iron Lake, on the point two-thirds mile east of Bottle Portage and 600 feet west of the shallow rocky narrows between the northwest arm and the main body of the lake. The rock on which the monument is situated is cut off from the shore at high water. Reference monument 624 is 600 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 626** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the south shore of the northwest arm of Iron Lake, on the northwest slope of the hill two-thirds mile east of Bottle Portage and 500 feet west of the shallow rocky narrows between the northwest arm and the main body of the lake; about 50 feet from the shore and 25 feet above the high-water mark. Reference monument 625 is 250 feet north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 627 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the east side of the shallow rocky narrows between the northwest arm and the main body of Iron Lake, about three-fourths mile east of Bottle Portage; close to the shore and the high-water mark. Reference monument 625 is 700 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 628 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the west side of the shallow rocky narrows between the northwest arm and the main body of Iron Lake, about three-fourths mile east of Bottle Portage, close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 629 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the north shore of Iron Lake, 1,000 feet south of the shallow rocky narrows that connect the northwest arm with the main body of the lake; about 50 feet from the shore and 10 feet above the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 630 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On a knob on the hillside 1,000 feet south of the shallow rocky narrows that connect the northwest arm with the main body of Iron Lake; 600 feet northwest of the prominent point where the lake widens out.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 631** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of the bay in Iron Lake, one-half mile southeast of the shallow rocky narrows that connect the northwest arm with the main body of the lake; 500 feet east and a little north of the east end of the island or which reference monument 632 is situated. The monument is close to the shore and the high-water mark.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 632** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On an island in Iron Lake nearly one-half mile southeast of the shallow rocky narrows that connect the northwest arm with the main body of the lake. The monument is on the rise at the northwest end of the island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 633** (Ontario, Rainy River District; J. J. McArthur, 1916).—On a point of the south shore of the bay on the east side of Iron Lake one-half mile southeast of the shallow rocky narrows that connect the northwest arm with the main body of the lake. Reference monument 632 is about 1,000 feet west and a little north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 634** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the shore of Iron Lake, one-half mile west of the prominent point that is one-third mile south of the shallow rocky narrows that connect the northwest arm with the main body of the lake. Reference monument 635 is 2,000 feet southeast.

**Reference Monument 635** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On an island in Iron Lake about three-fourths mile south of the shallow rocky narrows that connect the northwest arm with the main body of the lake, and 300 feet west of a cliff on the point on the northeast shore. The monument is on a knoll on the west end of the island. Reference monument 632 is about 2,000 feet to the northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 636** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On an island about 1,000 feet in diameter in Iron Lake, about a mile south of the shallow rocky narrows that connect the northwest arm with the main body of the lake; just west of the channel north of Four Island, the mile-long island, and a little over a mile west of Rebecca Falls. The monument is on the southeast point of the island. Reference monument 635 is about one-fourth mile northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 637 (Ontario, Rainy River District; J. J. McArthur, 1916).—On a small island in Iron Lake, a mile south of the shallow rocky narrows that connect the northwest arm with the main body of the lake, and 500 feet west of the west end of Four Island, the mile-long island southwest of Rebecca Falls. Reference monument 635 is nearly one-half mile north and reference monument 636 is about 1,000 feet northwest. Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 638** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On an island about 700 feet long in Iron Lake, 1½ miles south of the shallow rocky narrows that connect the northwest arm with the main body of the lake, and about 1,000 feet from the west shore of the lake. Reference monument 637 is about 2,000 feet northeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 639** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a small island in Iron Lake 1½ miles south of the shallow rocky narrows that connect the northwest arm with the main body of the lake. The island is close to a larger one which extends about 2,000 feet south, and is connected to it at extreme low water. The monument is 1,500 feet south of the west end of Four Island, the mile-long island southwest of Rebecca Falls. Reference monument 640 is about 200 feet south and reference monument 637 is 1,500 feet northwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 640 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On an island in Iron Lake 1½ miles south of the shallow rocky narrows that connect the northwest arm with the main body of the lake. The island extends 2,000 feet in a southerly direction and is about 1,500 feet south of the west end of Four Island, the mile-long island southwest of Rebecca Falls. Reference monument 639 is about 200 feet north.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 641** (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On a small island in Iron Lake, 1<sup>3</sup>/<sub>4</sub> miles southeast of the shallow rocky narrows that connect the northwest arm with the main body of the lake, and 400 feet south of the most southern point of Four Island, the mile-long island southwest of Rebecca Falls. The monument is 2 miles west of Curtain Falls. Reference monument 640 is about one-half mile northwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 642** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the north side of Three Island in Iron Lake, nearly a mile south of Rebecca Falls and 1½ miles west of Curtain Falls. The island is about two-thirds mile long in an east and west direction, and the monument is about 200 feet east of the point at the northwest corner of the island. Reference monument 641 is about 2,000 feet southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 643** (Ontario, Rainy River District; J. J. McArthur, 1916).—On the southeast side of Four Island, the mile-long island in Iron Lake southwest of Rebecca Falls; on the southwest point of a small bay and about halfway between the northeast and south points of the island. The monument is about  $1\frac{1}{3}$  miles west of Curtain Falls and 750 feet north of reference monument 642.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 644** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the north side of Three Island in Iron Lake nearly a mile south of Rebecca Falls and a mile west of Curtain Falls. The island is about two-thirds mile long in an east and west direction and the monument is 1,500 feet from the east end of the island. Reference monument 642 is about 1,700 feet west on the same island.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 645 (Ontario, Rainy River District; J. J. McArthur, 1916).—On the north shore of Iron Lake, 1 mile west of Curtain Falls. The monument is about 100 feet from the shore on the east point of

the bay that is about 1,000 feet east of Four Island, the mile-long island southwest of Rebecca Falls. Reference monument 644 is about one-fourth mile southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 646** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On a small island in Iron Lake just off the long point on the south side of the mouth of Curtain River, about three-fourths mile west of Curtain Falls. Reference monument 645 is about one-third mile northwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 647 (Ontario, Rainy River District; J. J. McArthur, 1916).—On an island about 300 feet long in Iron Lake, 400 feet east of the point on which reference monument 645 is located. It is at the mouth of Curtain River, three-fourths mile due west of Curtain Falls. Reference monument 646 is about 800 feet southeast.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 648 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the south side of Curtain River, one-half mile west of Curtain Falls at the point where the river widens into Iron Lake. There is a rocky point 300 feet to the eastward and a bay about 1,000 feet deep on the north shore and to the eastward. Reference monument 647 is about one-fourth mile west.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 649** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the north side of Curtain River, one-half mile west of Curtain Falls, about 400 feet west of the entrance to a bay that is about 1,000 feet deep. Reference monument 648 is about 350 feet to the south.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 650 (Minnesota, St. Louis County; J. J. McArthur, 1916; 1921).—On the south side of Curtain River, on top of the hill at the west end of the portage between Curtain River and Crooked Lake, one-third mile west of Curtain Falls. The monument is about 100 feet from the shore and about 30 feet above the high-water mark. There is an island about 200 feet in diameter about 200 feet northwest. Reference monument 648 is about 1,000 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

Reference Monument 651 (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On a bowlder about 15 feet high, close to the point north of the rapids; just east of the island, 200 feet in diameter, in Curtain River, one-third mile west of Curtain Falls and south of the bay on the north shore. Reference monument 650 is about 300 feet southwest.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 652** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the south side of Curtain River, about 1,000 feet west of Curtain Falls, on a shelf on the hillside just above the trail; about 100 feet from the shore and 30 feet above the high-water mark. Reference monument 650 is about 800 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 653** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the north side of Curtain River, about 1,000 feet west of Curtain Falls; near the east end of the portage from the smooth stretch of the river to the still water south of the bay; about 75 feet from the shore and 20 feet above the high-water mark. Reference monument 651 is about 700 feet west, near the west end of the portage.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 654** (Minnesota, St. Louis County; J. J. McArthur, 1916).—On the south side of Curtain River, on a little knob on the northeast end of the ridge which parallels the river, 300 feet west of Curtain Falls; about 200 feet from the shore and 80 feet above the high-water mark. Reference monument 652 is about 550 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 655** (Ontario, Rainy River District; J. J. McArthur, 1916; 1921).—On the north shore of Curtain River, about 250 feet northwest of Curtain Falls, on a knoll between the main ridge and the river; 125 feet from the shore and 25 feet above the high-water mark. Reference monument 653 is about 850 feet to the westward.

Station mark: A manganese-bronze post, 8 inches high, set in a drill hole in rock in place.

**Reference Monument 656** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1921).—At the west end of Crooked Lake. The station is on the south shore at the east end of the Curtain Falls Portage. It is on a smooth granite ledge about 5 meters from the stream and about 1 meter north of the portage trail.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

416

Reference Monument 657 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—At the west end of Crooked Lake about 100 meters northeast of the head of Curtain Falls. The station is on top of a rocky point about 15 meters back from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 658** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 400 meters east of the head of Curtain Falls. The station is on the first point of any size in the shore east of the falls. It is on a granite ledge about 4 meters from the water and 3 meters above the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 659 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 250 meters east of Curtain Falls. The station is on a granite point about 4 meters above the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 660 (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On the west end of Crooked Lake, about 850 meters east of Curtain Falls. The station is on a small bare granite islet. It is on the highest point, which is about 1½ meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 661 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake, about seven-eighths mile east of Curtain Falls. The station is on the high granite point just south of the mouth of Sarah River, the stream through which Roland Lake discharges into Crooked Lake. It is on a shoulder of the point about 100 meters back from the shore line on the west and about 30 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 662 (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 1¼ miles southeast of Curtain Falls. The station is on the north point of the fourth headland above Curtain Falls. It is on a granite ledge about 6 meters back from the extreme point. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 663** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 1¼ miles southeast of Curtain Falls. The station is on the southwest point of the large island in the middle of the large open northwest part of the lake. This point of the island is almost an island itself, being connected to the main island by only a low reef of rocks. The station is in the solid ledge about 3 meters back from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 664 (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 2¼ miles southeast of Curtain Falls. The station is on the northeast point of the large island lying in this part of the lake. It is on a large flat fixed rock about 12 meters from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 665** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 2½ miles southeast of Curtain Falls. The station is on a small round island in the bend of the lake and about midway between the large islands in the eastern channel and the large island at the south side of the northwest open body of the lake. It is on a granite point on the east end of the island, about 3 meters back from the water and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 666** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 2¼ miles southeast of Curtain Falls. There are three small islands lying in a north and south row just off the Canadian shore. The length of the row is about 600 meters. The station is on the middle one of this row of islands. There is a large and very irregularly shaped island about 350 meters southwest of the station. The island on which the station is situated lies not more than 50 meters offshore from a rugged and sharp point of the mainland. The station is on the west point of the island, on a large flat-topped rock, partially in the water, whose dimensions are about 3 by 3 meters in cross section and 3 meters high.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 667 (Minnesota, St. Louis County; E. R. Martin, 1916; 1921).—On the western part of Crooked Lake, on the west end of the very large island that lies in the turn of the lake 3 miles southeast of Curtain Falls. The station is about 50 meters from the north shore and about 250 meters from the west shore of the island. It is on top of a narrow rock ledge about 15 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

96030-31-28

**Reference Monument 668** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 3¼ miles southeast of Curtain Falls. The station is on a small island lying about 50 meters south of the Canadian shore and about 380 meters north of the east end of a very large long island. There is another small island, about the size of the island the station is on, halfway between the station and the large island. The shore of the mainland north of the station is very regular and has an east and west direction for more than a half mile in either direction. The station is on a large lone bowlder on the highest part of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 669** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 4 miles southeast along the boundary channel from Curtain Falls. The station is on a small rock islet just north and east of the narrow entrance to the second large southern bay of the lake counting from the west. The rock islet is about 6 meters in diameter and has a rounded top about 3 meters above the water. The station is on the highest point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 670** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 4¼ miles southeast along the boundary channel from Curtain Falls. The station is on a large island lying just north and east of the entrance to the second (from the west) large southern bay of the lake. It is on the smooth granite ledge on the highest point of the island, being about midway east and west, and near the south side of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 671** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 4¼ m les southeast along the boundary channel from Curtain Falls. The station is on a large island lying just north and east of the entrance to the second (from the west) large southern bay of the lake. It is on the high granite knoll on the east end of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 672** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 4<sup>3</sup>/<sub>4</sub> miles east along the boundary channel from Curtain Falls. The station is on a large L-shaped island lying about 500 meters south of a narrow wedge-shaped bay that indents the north shore of this part of the lake. It is on the south ledge of the east part of the island, on the high, level top, about 9 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 673** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 5 miles east along the boundary channel from Curtain Falls. The station is on a small island about 600 meters west of the largest island in this part of the lake, and about 120 meters east of the next large island to the west of the largest one before mentioned. It is on the high part of the south end of the little island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 674** (Ontario, Rainy River District; E. R. Martin, 1915; 1916).—On Crooked Lake, about  $5\frac{1}{2}$  miles east of Curtain Falls. The station is on the northwest point of a large island lying between a large northern bay and a large southern bay of the lake. It is on a ledge about 1.5 meters above the water and near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 675** (Minnesota, St. Louis County; W. B. Fairfield 1914; 1916).—On the south shore of Crooked Lake, about 4¾ miles east along the boundary channel from Curtain Fals. The station is on the high headland of the most northern point of the shore just west of the largest island in 1this part of the lake. It is on the bare rock on the summit of the headland about 6 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 676 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 5 miles along the boundary channel east of Curtain Falls. The station is on the southwestern point of the largest island in this part of the lake. The narrow boundary channel passes to the south and west of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in a round rock.

**Reference Monument 677** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—Near the middle of Crooked Lake, about 5 miles east of Curtain Falls. The station is on the most southern projecting point of a large island lying at the east entrance to a rather narrow east and west passage or channel of the lake. It is about 1.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the bare rock of the point.

Reference Monument 678 (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1916).—On the south shore of Crooked Lake, about 5 miles east of Curtain Falls and near the center of the main body of the lake. The

station is on a low projecting point on the west side of the entrance to the second large southern bay of the lake counting from the east. There is a large island just north of the point and the boundary channel passes between the station point and a like projecting point on the island. Reference monument 677 is on the point on the island. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 679** (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 6 miles east by south from Curtain Falls. The station is on the northwest point of an island about 250 by 500 meters lying north of the middle one of the large southern bays of the lake. It is on top of the rock point about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 680** (Ontario, Rainy River District; W. B. Fairfield, 1915; 1921).—Near the middle of Crooked Lake. The station is on the northern and smaller of the two large islands that lie in the center of the lake and north of the wide entrance to the second from the east of the four large southern bays of the lake. It is on a large rock off the west point of the island, about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 681** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north side of Crooked Lake, about 6 miles by air line, or about 7 miles by the lake channel, east of Curtain Falls. The station is on one of the very large northern peninsulas which extend in a large irregular mass in a southeast direction from a low narrow isthmus. It is on the highest hill on the southern part of this peninsula. There is a small lake in a hollow of the hills just north of the station, and a long narrow lagoon heads at the foot of the steep hill just south of the station and connects with the lake about 1 mile to the east. There is only a slight barrier between the head of the lagoon and the open water of the lake. The station is on the bare summit of the hill about 45 meters above the lake level and about 300 meters north from the open water of the main channel of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 682** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 2½ miles west of the east entrance to the large irregular main body of the lake. The station is on the extreme southern tip of the large high timbered island that lies at the west end of the main east and west channel of the lake. This is the third island in the channel as approached from the east. the boundary passing around its south end.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 683 (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 6 miles by air line southeast of Curtain Falls. The station is on a small green island near the middle of the third large southern bay from Curtain Falls. It is on the bare ledge on the northeast part of the island. about 3 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 684** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the south shore of Crooked Lake, about 7 miles southeast of Curtain Falls. The station is on the bold headland at the east side of the entrance to the third great southern bay from Curtain Falls. It is on top of the high steep bluff about 20 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 685** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 1 mile west of the east entrance to the lower or main body of the lake. The station is on a small rocky islet in the main channel of the lake, about 350 meters west of the long peninsula extending from the south, about 400 meters east of the large L-shaped island lying in the channel, and about 150 meters north of the smaller southern peninsula. It is on the highest point of the bare rock, less than a meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 686** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake. The station is on the north side of the main channel through the lake, about 1 mile west of the narrows and rapids at the east entrance to the lower level of the lake. It is on the end of a finger-like projection of the shore line that terminates in a prominent knoll. There are deep indentations of the shore line on both sides of the point. The double point at the north end of the long narrow peninsula that reaches up from the south lies just across the channel to the east from the station. The station is on the granite ledge on the summit of the knoll.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 687** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the eastern part of the large irregular main body of Crooked Lake, about seven-eighths mile west of the east entrance thereto. The station is on the double point of the long narrow peninsula that forms the western side of the most eastern

of the large southern bays of the main body of the lake. It is on the southwest tip of the western prong of the double point, on the summit of a knoll, about 10 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 688** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—Near the middle of the eastern part of Crooked Lake. The station is on the point on the west side of the entrance to the large northeast arm of the lake. The point ends in a knob and bluff about 12 meters high. The station is on the bluff overlooking the water, and is on the south side of the granite ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 689** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the eastern part of the large irregular main body of Crooked Lake, about seven-eighths mile west of the eastern entrance thereto. The station is on the double point of the long narrow peninsula that forms the western side of the most eastern of the large southern bays of the main body of the lake. It is on the north tip of the western prong of the double point, on the summit of the cliffs about 12 meters above the water, and on the western one of two large bowlders lying on top of the ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 690 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake. The station is on the rounded point on the east side of the entrance to the large northeast arm of the lake. It is about 550 meters north and across the main channel of the lake from the double point of the long narrow peninsula that forms the west side of the most eastern of the large southern bays of the lake. It is on a ledge on a bowlder-strewn beach, about 2 meters from the shore line and a little above the water level. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 691** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the south shore of Crooked Lake, about three-fourths mile west of the large island with rapids both north and south of it that separates the upper level of the lake from the lower level. The station is on the end of the long narrow point that extends up from the the south and ends in two knolls around which the international boundary makes a U-shaped turn. It is on the eastern one of the two knolls, in thick woods about 100 meters west of the shore, 150 meters south of the tip of the point, and 15 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 692** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the eastern part of the main body of Crooked Lake, about 1,100 meters west of the east entrance. The station is on a small rock islet lying about 100 meters offshore from the east side of the neck of the long peninusla which is on the west side of the entrance to the most eastern large southern bay of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 693** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the shore line of Crooked Lake, about 700 meters along the north shore west from the south end of the narrows that pass around the north and west sides of the large island lying in the east entrance to the large irregular main body of the lower level of the lake. The station is near the turn of the shore to the north, on a large flat rock partly in the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 694** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of a large bay of Crooked Lake and on the east shore of the long fingerlike peninsula, which is about three-fourths mile west of the east entrance to the large irregular main body of the lake. The station is on a granite ledge on a prominent point of the shore line about one-half mile south of the north end of the peninsula. It is about 2 meters from the shore line and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 695** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On Crooked Lake, near the east entrance to the large irregular main body of the lake. The station is on the north end of a small rock islet lying about 250 meters off the south end of the narrows around the north and west sides of the large island in the entrance. It is on the highest point of the rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 696** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake, near its eastern end. About 1¼ miles west of where the lake finally turns to the west into its large irregular east and west part. There is a narrow right-angle passage around the north and west sides of a large island. There are rapids in this passage, and the international boundary follows it. The station is on the point about 100 meters west of the south end of this passage, on a prominent bare rock about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 697** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake, about 6½ miles northwest of Lower Basswood Falls. The station is on the southeast point of a peninsula on the east side of a very large open expanse of the lake. A large island lies just east of the peninsula, and the narrow boundary channel passes around the north and west sides of the island, separating it from the peninsula.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 698** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the eastern part of Crooked Lake, on the west shore of the island at the east entrance to the lower or large irregular part of the lake. The station is on the west point of the island on the east side of the southern end of the channel that passes around the north and west sides of the island. The point on the mainland opposite is used as a camping ground. The station is on the rock ledge near the shore and a little above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 699** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of the eastern part of Crooked Lake. The station is on the west shore of the narrow and rapid channel that passes around the north and west sides of the large island lying in the east entrance to the large irregular main part of the lake. It is on a little round knob just south of the northwest angle of the channel, about  $4\frac{1}{2}$  meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 700 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the north shore of Crooked Lake, near its east end. The station is on the south shore of the narrow and rapid channel that passes around the north and west sides of the large island lying in the east entrance to the large irregular main body of the lake. It is just at the foot of the small rapids in the channel, and near the west end of the east and west course of the channel. It is on a fixed rock at the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 701** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the north shore of Crooked Lake, near its east end. The station is on the north shore of the narrow and rapid channel that passes around the north and west sides of the large island lying in the east entrance to the large irregular lower part of the lake. It is opposite the middle point of the island, on a rock shelf, about 2 meters from the shore, and about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 702** (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On Crooked Lake, on the north shore of the large island that lies in the east entrance to the large irregular main body of the lake. The station is on the point, near the middle of the north shore, that juts out into the narrowest place in the channel north of the island. It is on the shore line about 30 meters above the rapids.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 703 (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On Crooked Lake, on the northeast point of the large island that lies in the east entrance to the large irregular main body of the lake. The station is on the highest point of a little projecting point of rock that is probably an island at high water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 704** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the eastern part of Crooked Lake. The station is on the south point of a large island lying in a bight of the north shore just after turning west from the long narrow north-and-south eastern reach of the lake toward the entrance to the large irregular main body of the lake. It is on top of the granite ledge about 15 meters back from the shore line and about 7 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 705** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the south shore of the eastern part of Crooked Lake, on the north end of the long peninsula that lies on the west side of the northern extremity of the long north-and-south eastern portion of the lake. The lake turns to the west around the end of this peninsula. The entrance to the large irregular body of the lower lake is about three-fourths mile to the west. The station is on a solid granite ledge on the summit of the hill on the northwest point of the peninsula.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 706** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake, at the bend of the lake where the long narrow north-and-south stretch of the lake turns to the west toward the main body of the lake. The station is on the point at the west side of the entrance to the large bay that here extends to the north. The rock point extends out beyond the timber line about 20 meters The station is on the highest part of the ledge about 12 meters from the extreme point.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 707** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the eastern part of Crooked Lake, in the turn of the lake where the long narrow north-and-south reach of the lake turns westward toward the main body of the lake. The station is on the high bare summit of the large island that lies in the turn of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 708** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the eastern part of Crooked Lake, in the turn of the lake where the long narrow north-and-south stretch of the lake turns to the west toward the main body of the lake. The station is on the south point of the island that lies in the mouth of the bay that extends to the north. It is about 12 meters back from the extreme point and about 4.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 709 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 5% miles north of Lower Basswood Falls. The station is on the point east of and opposite the largest island in the north end of the long narrow north-and-south part of the lake. It is on a granite ledge among the dead trees on the highest part of the bluff, about 50 meters east of the shore line and about 250 meters south of the north end or tip of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 710** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the eastern part of Crooked Lake, about 5% miles north of Lower Basswood Falls. The station is on the highest point on the north end of the largest island in the north end of the long narrow north-and-south part of the lake. It is on the highest part of the smooth bare granite ledge of the summit.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 711** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east side of Crooked Lake, about 5½ miles north of Lower Basswood Falls. The station is on the bluff at the south end of the narrows opposite the south end of the largest island in the north end of the long narrow north-and-south reach of the eastern part of the lake. It is about 100 meters back from the shore line on the smooth granite ledge on the summit of the bluff.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 712** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 5¼ miles north of Lower Basswood Falls. The station is on the summit of the knob on the point that is 200 meters due west of the south end of the largest island lying in the north end of the long narrow north-and-south reach of the eastern part of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid granite ledge.

**Reference Monument 713** (Minnesota, Lake County; W. B. Farfield, 1914; 1916).—On the west shore of Crooked Lake, about 5 miles north of Lower Basswood Falls. The station is on a point lying between a little swamp and the open water of the lake about one-half mile south of the largest island lying in the north end of the long narrow north-and-south reach of the eastern part of the lake. It is about 80 meters north of the tip of the point, about 50 meters from the shore line on the east, about 50 meters from the swamp on the west, and on the highest part of the solid bare granite point about 12 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 714** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 4¾ miles north of Lower Basswood Falls. The station is on the most northern of several bare granite islets lying near the Canadian shore, about 500 meters north of the narrows at the south end of the second and last long narrow north reach of the eastern part of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 715** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west side of Crooked Lake, about 4¾ miles north of Lower Basswood Falls. The station is on the first point north of the narrows just north of where the lake turns from the west to the north into the second and last long narrow north reach. It is on the highest part of the bare granite bluff about 100 meters north of the south end of the point and about 40 meters west from the shore line of the east side of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 716 (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On the west side of Crooked Lake, about 4½ miles north of Lower Basswood Falls. The station is on the summit of the hill on the west side of the very narrow passage near the south end of the second long narrow north reach of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock ledge.

Reference Monument 717 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east shore of Crooked Lake, about 4½ miles north of Lower Basswood Falls. The station is on the high rock bluff overlooking the very narrow passage near the south end of the second and last long narrow north reach of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 718** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 4¼ miles north of Lower Basswood Falls. The station is on the low granite point 300 meters directly west across the lake from the long peninsula around which the lake turns into the second and last narrow north reach. It is on the solid ledge about 4 meters from the water and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 719** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake about 4¼ miles north of Lower Basswood Falls. The station is on the narrow tip of the long peninsula around which the lake turns into the second and last narrow north reach. It is about 4 meters from the water and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 720** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake, about 4¼ miles north of Lower Basswood Falls. The station is on the rocky point on the east side of the peninsula around which the lake turns from the west to the north into the second northern reach of the lake. It is on the sloping granite ledge about 7.5 meters back from the water's edge and about 4.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 721** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the south shore of Crooked Lake, about 4 miles north of Lower Basswood Falls. The station is on a rocky point about fiveeighths mile west of the large open expanse of the lake that is at the north end of the narrow crooked eastern part of the lake. It is opposite the long peninsula around which the lake turns into another narrow north reach. It is on the smooth granite ledge about 7.5 meters back from the shore line and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 722** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the south shore of Crooked Lake, about 4¼ miles north of Lower Basswood Falls. The station is on a low granite point about 400 meters west of where the lake makes a turn to the west. It is on the granite ledge about 4.5 meters from the water's edge and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 723** (Minnesota, Lake County: W. B. Fairfield, 1914; 1916).—On the south shore of Crooked Lake, about 4½ miles north of Lower Basswood Falls. The station is on the point around which the lake turns through a narrow passage from the broad north-and-south expanse toward the west, in which direction it continues for about three-fourths mile. The station is on a large fixed rock back of the line of bowlders along the shore, and about 4.5 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 724** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the north shore of Crooked Lake, about 4¼ miles north of Lower Basswood Falls. The station is on the point at the narrows where the lake makes the first turn of any great length toward the west. It is directly opposite reference monument 723. It is on a smooth surface of exposed rock a little above the lake level and about 6 meters back from the edge of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 725** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 4 miles north of Lower Basswood Falls. The station is on the highest point of a small, bare, rocky islet in the wide expanse of the lake about 600 meters north of the narrows which are at the south entrance to the wide part. The islet is about 100 meters from the east shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 726** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On Crooked Lake, about 3<sup>3</sup>/<sub>4</sub> miles north of Lower Basswood Falls. The station is on the west end of an island lying just north and east of the narrows where the lake widens into an open expanse about 1 mile long and one-half mile wide. It is on a sheer rock bluff about 3.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 727** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 3% miles north of Lower Basswood Falls. The station is on the long low shelving point at the north end of the narrows north of which the lake widens into an open expanse about 1 mile long and one-half mile wide. There is a small wooded island just north of the point. The station is on the highest part of the ledge about 12 meters from the trees.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

## APPENDIX V

**Reference Monument 728** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east shore of Crooked Lake, about  $3\frac{1}{2}$  miles north of Lower Basswood Falls. The station is on the high rock bluff point near the north end of the narrows, north of which the lake widens into an open expanse about 1 mile long and one-half mile wide. It is on the level top of the highest part of the bluff just east of a wide cleft in the ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 729** (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On the west shore of Crooked Lake, about  $3\frac{1}{2}$  miles north of Lower Basswood Falls. The station is on the high rocky knoll at the northern end of the narrows north of which the lake widens into an open expanse about one mile long and one-half mile wide.

Station mark: A standard 8-inch manganese-bronze reference post set in the smooth granite top of the knoll.

Reference Monument 730 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east shore of Crooked Lake, about 3½ miles north of Lower Basswood Falls. The station is on the high rock bluff at the south entrance to the narrows, which are about 600 meters long and north of which the lake widens into an open expanse about a mile long and one-half mile wide. It is on a large fixed bowlder on top of the bluff.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 731** (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On the west shore of Crooked Lake, about 3½ miles north of Lower Basswood Falls. The station is on the bluff near the middle of the west shore of a pond-like expansion of the lake between two narrows. There are slight rapids in the narrow channel three-eighths mile north of the station and also in the narrow channel three-eighths mile south of the station. The station is on the smooth rock top of the eastern part of the bluff. There is a higher point on the bluff about 30 meters northwest of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 732 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east shore of Crooked Lake, about 2% miles north of Lower Basswood Falls. The station is on a point at a very narrow place in the lake about 100 meters northeast of a small wooded island. It is on a large fixed rock on top of the point. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 733** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the west shore of the long narrow north-and-south reach of Crooked Lake, about 3 miles north of Lower Basswood Falls. The station is on a projecting point of the shore about 100 meters north of a small island and near the south end of a wide place in the channel. It is on a bowlder about 9 meters from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 734** (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On the west shore of Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is on the summit of a hill about 120 meters west of a very narrow and rapid channel of the lake about 200 meters south of a small island. It is on a large fixed rock among the trees.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 735** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east shore of Crooked Lake, about 2¾ miles north of Lower Basswood Falls. The station is on a rocky point at a very narrow channel of the lake. It is on the highest part of the point on a large fixed rock in the woods. There is a small island in the lake about 200 meters north of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 736** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 2½ miles north of Lower Basswood Falls. The station is on the first rocky point north of where the lake turns to the north just west of the entrance to Moose Bay. It is on a fixed rock about 2.5 meters east of a much larger fixed rock which is partly in the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 737** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 2½ miles north of Lower Basswood Falls. The station is on a point about 300 meters north of where the lake turns from a westerly course to a northerly course. It is on the ledge about 4.5 meters from the water's edge and about 2.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 738** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is near the point of the shore where the lake turns to the north just west of the entrance to Moose Bay. It is on a sloping granite ledge about 2.5 meters from the water's edge and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 739 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the east shore of Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is on the point around which the lake turns from the west to the north just west of the entrance to Moose Bay. It is on a large fixed rock about 4.5 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 740 (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On the west shore of Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is in the bend of the bight where the lake makes a turn from the west to the north just west of the entrance to Moose Bay. It is on a sloping ledge at the foot of a steep hillside, about 2.5 meters above the lake level, and about 2.5 meters back from the water's edge. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 741** (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is on the east side of the island lying nearest to the United States shore off the entrance to Moose Bay. It is on the highest part of the bare granite rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 742** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is on the south end of the high, wooded, rocky island that lies nearest the Canadian shore in the entrance to Moose Bay. It is on a smooth granite ledge about 4.5 meters back from the shoreline and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 743** (Minnesota, Lake County; E. R. Martin, 1915; 1916).—On the west shore of the long narrow north-and-south reach of Crooked Lake, about 2 miles north of Lower Basswood Falls. The station is on a point of the shore about 400 meters south of the entrance to Moose Bay. It is on a rock at the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a ledge.

**Reference Monument 744** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 2 miles north of Lower Basswood Falls. The station is at the south end of a high bluff just north of the narrows and where the lake begins to widen and turn toward the west. It is about 1.5 meters from the water's edge and about 0.6 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 745** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 1¾ miles north of Lower Basswood Falls. The station is on a rocky bluff point in the second narrow place north of the falls. It is on top of the rock ledge, on a level shoulder about 6 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 746 (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, 1¾ miles north of Lower Basswood Falls. The station is at the foot of the sloping rocky bank in the second narrows north of the falls. It is about 2 meters back from the water's edge and about 1 meter above the lake level. Reference monument 745 is directly across the lake from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 747** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 1% miles north of Lower Basswood Falls. The station is near the north end of the smooth cliff known as Indian Rock, which has drawings on its face. It is at the foot of the cliff on top of a rock about 3 by 4.5 meters in cross section and 3 meters high. This is the most northern large rock lying at the foot of the cliffs.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 748** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 1% miles north of Lower Basswood Falls. The station is on the highest part of a rocky point just north of the first narrows in the lake, and is opposite the north end of the smooth cliff known as Indian Rock, which has Indian drawings on its face.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 749** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 1¼ miles north of Lower Basswood Falls. The station is on the rocky point at the north end of a narrow place in the lake. It is on a low sloping ledge at the foot of the cliff, about 2.5 meters from the water's edge and about 0.6 meter above the lake level. Just opposite the station is a smooth vertical cliff rising about 20 meters from the water and known as Indian Rock, upon which are drawings of birds and animals ascribed to the Indians of some past generation.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

.

**Reference Monument 750** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 1¼ miles north of Lower Basswood Falls. The station is on the south end of the smooth cliff that rises about 20 meters from the water and is known as Indian Rock from the drawings of birds and animals on it, which are ascribed to the Indians. The station is on a sloping shoulder of the cliff about 3 meters from the edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 751 (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west side of Crooked Lake, about 1 mile north of Lower Basswood Falls. The station is on the high rocky point near the northern end of the peninsula at the entrance to the narrows of the lake. It is on a small ledge about 3 meters above the water and about 3 meters back from the water's edge. The bluff rises steeply back of the station. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 752 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about 1 mile north of Lower Basswood Falls. The station is on the north end of a rocky bluff, after entering the narrow part of the lake from the south. It is on a shoulder of the rock about 4.5 meters above the lake level. The bluff rises sharply back of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 753** (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore of Crooked Lake, about 1,400 meters north of Lower Basswood Falls. The station is on the southeast point of a prominent peninsula just south of a narrow place in the lake. It is on a ledge, about 2.5 meters from the water's edge and about 0.6 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 754 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore of Crooked Lake, about three-fourth mile below Lower Basswood Falls. The station is on a granite ledge on a prominent point of the shore that is much used as a camp ground. It is about 3 meters from the water's edge and about 2.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 755 (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On a prominent point on the west shore near the south end of Crooked Lake. The station is about three-fourth mile north of Lower Basswood Falls. It is on a solid ledge among the trees about 12 meters back from the shore line and about 5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 756** (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore near the south end of Crooked Lake. The station is on the northern part of a cleft rocky point about 950 meters north of Lower Basswood Falls. It is on a rough ledge about 2 meters from the water's edge and 0.5 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 757 (Ontario, Rainy River District; W. B. Fairfield, 1914; 1916).—On the east shore near the south end of Crooked Lake. The station is on the sloping granite ledge on the rocky point about 600 meters north of Lower Basswood Falls. It is opposite the wooded island on which reference monument 758 is situated. There is a little bay and another prominent point just north of the station. The station is about 3 meters from the water's edge and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 758 (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—In the south end of Crooked Lake, on a prominent wooded island about 650 meters north of Lower Basswood Falls. The station is on the rocky point on the eastern end of the island, about 3 meters from the shore line, and about 2.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 759 (Minnesota, Lake County; W. B. Fairfield, 1914; 1916).—On the west shore near the south end of Crooked Lake. The station is on the timbered point about 500 meters north of Lower Basswood Falls. It is on a fixed rock about 3 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 760 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—At the head of Crooked Lake, on a small rocky island lying off the east shore about 300 meters below Lower Basswood Falls. The station is on the northwest part of the island, about 0.3 meter above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 761 (Minnesota, Lake County; W. B. Fairfield, 1914; 1921).—On the south end of Crooked Lake. The station is on the east point of an island about 200 meters west of Lower Basswood Falls. Station mark: A standard 8-inch manganese-bronze reference post set in the rock. Reference Monument 762 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—At the head of Crooked Lake, on the point just north of Lower Basswood Falls. The station is back in the woods, about 100 meters north of the falls and about the same distance east of the shore line of the lake. It is about 15 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 763 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—At the head of Crooked Lake, on the north end of the largest of the islands at Lower Basswood Falls. The station is on the highest point of the bare rock, about 4 meters above high-water mark and just north of the portage trail. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 764** (Ontario, Rainy River District; E. R. Martin, 1915; 1916).—On the north shore of Basswood River, about 400 meters upstream from Lower Basswood Falls. The station is on a large detached rock, surrounded by timber, back about 9 meters from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 765** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south side of Basswood River, about 600 meters east of Lower Basswood Falls. The station is on the summit of the high rocky peninsula that is connected by a marshy isthmus to the mainland on the south. Reference to the maps of 1826 indicates that the peninsula was an island at that time.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid granite ledge of the summit.

Reference Monument 766 (Minnesota, Lake County; E. R. Martin, 1915; 1921).— On the south shore of Basswood River, on the point where the river widens out, about 1,000 meters above Lower Basswood Falls. Station mark: A standard 8-inch manganese-bronze reference post set in a rock near the shore line.

Reference Monument 767 (Ontario, Rainy River District; E. R. Martin, 1914; 1921).—On the north shore of Basswood River, at the place where the river widens out about 1,000 meters above Lower Basswood Falls. The station is on a sloping rock ledge about 10 meters from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge

Reference Monument 768 (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north shore of Basswood River, about 1,500 meters above Lower Basswood Falls on the point outside of Wheelbarrow Portage around North Falls. The station is on a flat rock just above the falls.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 769 (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the south shore of Basswood River, about 1,300 meters above Lower Basswood Falls. The station is on the point at the first narrow place, about 150 meters below Wheelbarrow Falls. It is on a ledge about 5 meters from the river. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 770** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On Basswood River about 1,500 meters above Lower Basswood Falls. The station is on the west shore of the island, around which the river splits into two narrow channels in one of which is Wheelbarrow Falls. It is on a flat rock just above the falls of the main channel.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 771** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the north shore of the large island in Basswood River, about 1,800 meters above Lower Basswood Falls. The station is about 200 meters upstream from Wheelbarrow Falls, on a ledge about 3.6 meters from the shore and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 772** (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north shore of Basswood River, about 1,800 meters above Lower Basswood Falls and about 200 meters above Wheelbarrow Falls. The station is on a sloping ledge near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 773** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—In Basswood River, on the northeast point of the large island that splits the river at Wheelbarrow Falls and about 2,200 meters above Lower Basswood Falls. The station is about 25 meters back from the extreme point and about 4.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

**Reference Monument 774** (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north shore of Basswood River, about 1½ miles above Lower Basswood Falls. The station is on the point on the east side of a small bay that extends north from the wide expanse of the river at this place. It is on a large flat rock about 15 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 775** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the south shore of Basswood River, about 2,000 meters east of Lower Basswood Falls. The station is on the point about 250 meters east of the rapids in the narrow channel passing south of the large island at Wheelbarrow Falls. It is on a flat rock a little above the water level.

Station Mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 776 (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north shore of Basswood River, about 2,100 meters east of Lower Basswood Falls. The station is on the brow of a steep hill at a place where the river, which has been flowing northeast for about 700 meters, suddenly widens out into a broad bay. It is about 50 meters back from the shore line, about 15 meters above the river, on a flat rock about 1.2 meters above the ground level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 777 (Minnesota, Lake County; E. R. Martin, 1915; 1916).—On the west bank of Basswood River, about 2 miles upstream from Lower Basswood Falls and on the most western bend of a north-and-south stretch of the river. The station is on top of a cliff or bluff about 30 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a flat rock just above the ground surface.

**Reference Monument 778** (Minnesota, Lake County; E. R. Martin, 1915; 1916).—On the southwest bank of Basswood River, about 2¼ miles upstream from Lower Basswood Falls. The station is on the point near the west limit of a large triangular expansion of the river. It is about 40 meters back from a little low projecting point of the shore line upon which are a few pine trees, about 250 meters southeast and upstream from the turn of the river, and 12 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a sloping ledge.

**Reference Monument 779** (Ontario, Rainy River District; E. R. Martin, 1915; 1916).—On the north bank of Basswood River, about 2½ miles upstream from Lower Basswood Falls. The station is on the east side of a little bay on the north side of a large triangular expansion of the river. It is on a flat rock overlooking the bay. A larger and higher rock shows near the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 780 (Ontario, Rainy River District; E. R. Martin, 1915; 1916).—On the north side of Basswood River, about midway between Basswood and Lower Basswood Falls. The station is on a flat, brushy, table-land, about 100 meters north of the river at the lower rapids and about 20 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a flat rock outcrop.

Reference Monument 781 (Minnesota, Lake County; E. R. Martin, 1915; 1916).—On the south side of Basswood River, about midway between Basswood and Lower Basswood Falls. The station is on a high rock ledge about 90 meters south of the river, about 250 meters upriver from the boat landing at the end of the Horse Portage road, between the portage road and the river, and about 30 meters above the water in the river. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 782 (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the northside of Basswood River, about midway between Basswood Falls and Lower Basswood Falls. The station is on top of a brushy hill between the river and a small lake, about 150 meters north of the river and about 30 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a flat-topped bowlder about 8 feet square.

**Reference Monument 783** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the south side of Basswood River, about midway between Basswood Falls and Lower Basswood Falls. The station is on top of a rocky hill between two rapids in the river and also between the river and the portage road. The hill is the second one from the west lying between the river and the road.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 784** (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north side of Basswood River, about 1½ miles downstream from Basswood Falls. The station is on the rocky summit of a hill that projects southward from the range of hills into a loop or bend of the river. It is about 100 meters from the river at its nearest point on the east of the station and about 30 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 785** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the south bank of Basswood River, about 1½ miles downstream from Basswood Falls. The station is on the bank between the river and the portage road at a point where the road comes down close to the river.

Station mark: A standard 8-inch manganese-bronze reference post set in a large bowlder.

**Reference Monument 786** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the south side of Basswood River, on the neck of the peninsula about 1,000 meters west of Basswood Falls. The station is on a flat ledge, about 50 meters north of the portage road, about 100 meters east of the river bank, and about 10 meters above the level of the water in the river.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 787** (Minnesota, Lake County; E. R. Martin, 1915; 1916).—On the south side of Basswood River, about 1,000 meters west of Basswood Falls. The station is on the west slope of the peninsula that lies in the loop of the river. It is about 250 meters north of the portage road where it crosses the neck, about 100 meters east of the river bank and about 18 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a sloping ledge.

**Reference Monument 788** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south side of Basswood River, on the high granite hill that lies in the big loop of the river about three-fourths mile below Basswood Lake. The station is on the summit, on the northwest side of the hill, on the highest point of rock overlooking the river.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 789 (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north side of Basswood River, about 1¼ miles downstream from Basswood Falls. The station is on a rock cliff at a bend where the river turns to the south. It is about 30 meters from the river and about 25 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 790** (Minnesota, Lake County; E. R. Martin, 1915; 1916).—On the south side of Basswood River, about 1 mile downstream from Basswood Falls. The station is on the slope of the hill about 200 meters below rapids, about 80 meters back from the shore line, and about 27 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in the rock, marking station "Fly," is 10.8 meters distant, in azimuth 249° 47′ from the monument.

Reference Monument 791 (Ontario, Rainy River District; E. R. Martin, 1915; 1916).—On the north side of Basswood River, about 1 mile downstream from Basswood Falls. The station is on a rock bluff about equally distant from two rapids in the stream. It is about 35 meters from the river and about 24 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 792** (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north side of Basswood River, about three-fourths mile downstream from Basswood Falls. The station is on the rock bluff on the point just above the rapids where the river turns to the west.

Station mark: A standard 8-inch manganese-bronze reference post in the rock.

**Reference Monument 793** (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the north shore of Basswood River, about three-fourths mile downstream from Basswood Falls. The station is at the head of a small bay just above the falls at the turn of the river toward the west. It is on a flat rock nearly level with the ground about 50 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 794** (Minnesota, Lake County; E. R. Martin, 1915; 1921).—On the point around which Basswood River turns from the north to the west, about 1,000 meters north of the head of Basswood Falls. The station is on the flat ledge on top of the point about 90 meters south of the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 795 (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On the east side of Basswood River, about 800 meters north of the head of Basswood Falls. The station is on the top of a rocky knob about 40 meters southeast of the foot of the rapids in the narrows and about 15 meters above the river level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 796** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north shore of Basswood River, about 400 meters north by east of the first rapids after leaving Basswood Lake. The station is on the north shore of the pond or slack water below the first rapids and is east of the north end of the first large island below the first rapids. It is about 60 meters west of a bluff point, on one of the large flat rocks of which the shore line here is composed. It is about 4 meters back from the water's edge and about 0.4 meter above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 797 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south side of Basswood River, about 700 meters below Basswood Lake. The station is on the high bluff west of the second large island in the river. The river strikes the face of the bluff in a broad expanse and turns at right angles

to the north along the face of the bluff and runs into a narrow passage and rapids about 300 meters north of the station. The station is on the first high bare spot on the bluff, about 8 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 798** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On Basswood River, about 175 meters below Basswood Lake. The station is on the second small rocky island below Basswood Falls. It is on the southwest and highest part of the island, about 4 meters back from the edge of the cliff or ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 799 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the west side of Basswood Lake and south of the head of Basswood River. The station is on the high granite hill just south of the second falls or rapids below Basswood Lake and west of the first falls. It is on the highest part of the granite top, about 150 meters back from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 800 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the west side of Basswood Lake and south of the head of Basswood River. The station is on the first rocky shoulder of the ridge that rises and extends to the west from Basswood Falls. It is on the highest part of the shoulder, on a large fixed rock, about 75 meters from the shore, and about 8 meters above the lake. It is a little west of the highest point on the lower portage trail.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 801 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the west end of Basswood Lake. The station is on the island lying at the falls at the head of Basswood River. It is on the summit of the western part of the island, on the smooth granite ledge about 75 meters back from the shore. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 802 (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the west shore of Basswood Lake, on the point at the west side of the narrow entrance to the bay leading to Basswood Falls. The station is on the top of the rock point, about 6 meters back from the water and 9 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 803** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the shore of Basswood Lake, on the point of the east side of the narrow entrance to the bay leading to Basswood Falls and about five-eighths mile southeast of the falls. The station is on the lake side of the point, about 100 meters north of the tip of the point. It is on the highest part of the first granite knoll up from the shore, about 6 meters from and 4 meters above the lake.

Station mark: A standard 8-inch magnanese-bronze reference post set in the granite ledge.

**Reference Monument 804** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On Basswood Lake about 1% miles due east of Basswood Falls. The station is on an island which is one of the group of islands lying west of the narrows passing around the north side of United States Point. The island is in the western tier of the group and is the second one of any size from the Canadian shore, from which it is about 400 meters distant. The station is on the solid rock, on the west end and on the highest part of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 805** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—In the big angle of Basswood Lake, on the point on the south shore of the lake around which the lake makes the big turn from west to southwest. This point is about 2 miles east by south, across the lake from Basswood Falls. A large island lying just north of the point is separated from it by a narrow and deep channel. The point itself is cut off from the mainland by a low, swampy pass, but little above the lake level. The station is on the summit of the high rocky hill which rises in a series of ledges from the water's edge on the west side of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock of the summit.

**Reference Monument 806** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—In the angle of Basswood Lake, on United States Point. The station is about 1½ miles distant and on the third high hill from the east end of the point. It is on the bare ledge on the highest part of the hill.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 807 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north shore of Basswood Lake, on the point of the shore at the west end, and on the north side of the narrow passage that lies along the north shore of United States Point. The station is about 60 meters west of the extreme tip of the point, on a rock ledge about 3 meters above the water, and about 6 meters back from the edge of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 808 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north shore of Basswood Lake, on the point of the shore opposite and northwest of the east end of United States Point.

The station is on the south side of the point, about 130 meters west of the extreme east end of the point. It is on the granite ledge that rises from the water, about 3 meters back from the shore, and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 809 (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—In the angle of Basswood Lake, on United States Point. The station is on the summit of the high rocky hill about one-half mile west of the tip of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock of the summit.

**Reference Monument 810** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the shore of Basswood Lake, on the south prong of the east end of United States Point. The station is about 100 meters southwest of the tip of this prong, on a rock ledge that rises from the water to a height of about 1.2 meters. It is about 2.4 meters back from the water's edge, on the highest part of the ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 811 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On Basswood Lake, on a small island 700 meters north of the east end of United States Point. The island is about 15 meters in diameter. It is almost of solid rock with its highest point about 4.5 meters above the lake level. Two other small, though somewhat larger islands lie about 100 meters south of the island on which the station is located. The station is on the highest point of the island on solid rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 812** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On Basswood Lake on the west end of a long, narrow island lying off the point of the east shore, directly east of and opposite United States Point. The station is on the second step of the solid ledge that forms the end of the island. It is on the highest point of the ledge, about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 813** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On Basswood Lake, on the point of the shore southeast of and opposite the extreme end of United States Point. The station is on the ledge of rock that rises from the water and extends back into the timber. It is about 2 meters from the water's edge and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 814** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the west shore of the north-and-south stretch of Basswood Lake and the south shore of United States Point. The station is on the point of the headland that projects out into the lake 1 mile southwest of the extreme end of United States Point. It is on the granite ledge about 6 meters back from the water's edge and about 3.5 meters above the lake level. A group of rocks and small islets lying about 200 meters off the point help to identify it as approached from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 815** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On Basswood Lake, on the smaller and northeastern one of two small islands that lie about 400 meters off the Minnesota shore due west of the south end of Canadian Point. The station is on the east end of the island, on a fixed rock, about 4 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 816** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On Basswood Lake, on a small island, in the north-and-south stretch of the lake, lying 125 meters off the most western point of Canadian Point. The station is on the western side of the island, on the highest part of a granite ledge, about 8 meters east of a large Norway pine tree overhanging the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 817** (Ontario, Rainy River District; E. R. Martin, 1915; 1921).—On Basswood Lake, on the small low double island that lies just north of where the lake makes the great bend from west to north. This small island lies 100 meters off the west shore of the large island lying just south of Canadian Point. The station is on the west end of the eastern part of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in rock. A drill hole within a triangle cut in the rock, marking triangulation station "Goat," bears north  $39^{\circ} 02'$  west, 1.8 meters from the monument.

**Reference Monument 818** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On Basswood Lake, on the large island that lies just to the west of the large bend of the lake from west to north. The island is L-shaped and is divided into east and west parts by a low pass across it. It lies about one-half mile north of the

entrance to Wind Bay. The station is near the middle of the eastern part of the island, on the summit of a sharp rocky knoll nearly bare of timber. The rest of the island is heavily timbered.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid ledge.

**Reference Monument 819** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On Basswood Lake, on the southernmost of the group of three small islands lying just south of the very large island around which the lake makes the large bend from west to north. The station is on the west end of the island in an old Indian camp ground among the large Norway pines. It is on a large fixed rock projecting about 0.5 meter above the ground.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 820** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south shore of Basswood Lake. The station is on the western one of the three points of the shore line south of the two large islands lying in the entrance to Merriam Bay. It is on a granite ledge of the rocky point, about 15 meters back from the shore line, and 6 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 821** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On Basswood Lake. on the largest of the group of small islands lying just south of the western one of the two large islands in the entrance to Merriam Bay. The station is on the most southern point of the island, on a ledge, about 4 meters back from the water's edge and 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 822** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the eastern part of Basswood Lake. The station is in the southwest part of Bayley Bay, on a small lone island 450 meters east of the big peninsula forming the west side of the bay. It is on the solid granite ledge on the highest part of the eastern end of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 823** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On a small island in Basswood Lake, near the east end of the lake, south of Bayley Bay, and near the south shore of the lake. Another somewhat larger island lies about 50 meters to the southwest. The station is on the east end of the island, on a large fixed rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 824** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south shore near the east end of Basswood Lake, on the bare rocky hill rising from the shore opposite the large wooded island that lies west of the first sharp turn of the lake below Prairie Portage. The station is on the solid ledge on the north brow of the summit.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 825** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the eastern part of Basswood Lake. The station is on the west end of the large island that lies just west of the first sharp turn of the lake below Prairie Portage. It is on a large fixed rock, just clear of the timber, on the extreme west tip of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 826 (Ontario, Rainy River District; W. B. Fairfield, 1915; 1916).—On the north shore near the east end of Basswood Lake. The station is on the point on the north side of the narrows entering Bayley Bay and the main part of the lake. It is on a rock about level with the ground. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 827** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—Near the east end of Basswood Lake, about 1¼ miles northwest of Prairie Portage. The station is on the summit of the high rocky knoll on the point around which the lake bends from north to west. It is on the solid granite ledge on the eastern and highest point of the summit.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 828 (Ontario, Rainy River District; W. B. Fairfield, 1915; 1916).—On the north shore of Basswood Lake, about 1 mile northwest of Prairie Portage. The station is on the point in the elbow of the crooked channel leading into Bayley Bay and the open lake. It is on a large rock near the shore line. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 829** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—Near the east end of Basswood Lake. The station is on the point on the east side of the narrows 1 mile north across the bay from Prairie Portage. It is on the most western part of the point, on a large fixed rock, about 3 meters back from the shore line and about 0.5 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 830** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—Near the east end of Basswood Lake. The station is on a small rocky knoll on the west side of the narrows about 1 mile northwest across the bay from Prairie Portage. It is just opposite and east of the point of the peninsula that is across the narrows.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid granite ledge on the summit of the knoll.

**Reference Monument 831** (Minnesota, Lake County; W. B. Fairfield, 1915; 1921).—On the south shore at the east end of Basswood Lake. The station is on the projecting point of the shore about 200 meters north of the rapids. It is on a rock near the bunk house of the lumber company at Prairie Portage.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 832** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—At the east end of Basswood Lake. The station is on the high rocky ridge between Basswood and Sucker Lakes, about 300 meters east of the dam at Prairie Portage.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid ledge of the summit.

**Reference Monument 833** (Minnesota, Lake County; W. B. Fairfield, 1915; 1921).—At the east end of Basswood Lake, below the dam at Prairie Portage. The station is on a smooth outcrop about 135 meters below the dam and just west of the trail to the camp.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 834** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—At the east end of Basswood Lake. The station is about 20 meters southwest of the dam at the outlet of Sucker Lake, on a rounded ledge south of the trail.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 835** (Ontario, Rainy River District; W. B. Fairfield, 1915; 1921).—On the north side of the stream between Sucker and Basswood Lakes, about 40 meters below the Prairie Portage Dam. The station is on a flat rock a little above the surrounding surface.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 836** (Minnesota, Lake County; W. B. Fairfield, 1915; 1921).—On a small island in Sucker Lake, about 500 meters southeast of Prairie Portage Dam and about 250 meters southwest of the mouth of Birch Lake. There is a slightly larger island about 100 meters west of this island. Station mark: A standard 8 inch manganese bronze reference post set in rock

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

**Reference Monument 837** (Minnesota, Lake County; W. B. Fairfield, 1915; 1921).—On a small wooded island on the south side of the channel between Birch and Sucker Lakes. The station is on solid rock on the highest point and near the center of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 838** (Ontario, Rainy River District; W. B. Fairfield, 1915; 1921).—On the north side of the outlet of Birch Lake. The station is about 75 meters back from the shore on the timbered ridge which is parallel to the stream.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 839 (Minnesota, Lake County; W. B. Fairfield, 1915; 1921).—At the outlet of Birch Lake. The station is on the ridge on the point of the mainland on the south side of the outlet of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 840** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the long narrow tongue of land south of the narrows between Birch and Sucker Lakes. The station is 320 meters east of the extreme west end of the tongue, near the north brow of the hill, about 50 meters south of the shore line, and about 24 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 841** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the point of the north shore, at the head of the narrows leading from Birch Lake into Sucker Lake. The station is on the steep hillside of the point, on the first bench, about 12 meters above the lake and about 12 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 842** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—At the west end of Birch Lake, on the large island lying in the entrance to the narrows between Birch and Sucker Lakes. The passage between the island and the mainland is shallow and marshy. The station is near the center and on the summit of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

96030-31-29

**Reference Monument 843** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—At the west end of Birch Lake, on the little round island just east of the approach to the narrows leading into Sucker Lake. This island is attached to the south shore by a narrow neck of land at low water. The station is on the north side of the island, about 4 meters back from the waters' edge and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 844** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south shore of Birch Lake, on the north point of the little round peninsula that forms the south side of the narrows  $1\frac{1}{2}$  miles east of the west end of the lake. The station is on a rocky point, 12 meters back from the water and 6 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 845 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north side of Birch Lake, about 1½ miles west of Carp Portage. The station is on the highest point of a peninsula extending into Birch Lake from the narrow divide between Birch Lake and a small lake to the north. It is about 600 meters northeast of the western point of the peninsula and is about 45 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 846** (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south shore of Birch Lake, about 1,700 meters west of Carp Portage. The station is on a rock at the water's edge, on a low point of the shore 450 meters west of the little island in the narrows.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 847 (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—In Birch Lake about 1,350 meters west of Carp Portage. The station is on the most eastern island in the lake, in the narrows between two peninsulas. It is near the highest point of the island, on smooth hard rock just at the surface of the ground. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 848** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north side of Birch Lake, about 1,350 meters west of Carp Portage. The station is on the summit of a hill on the narrow divide between Birch Lake and the small lake to the north. It is almost due north of the small island in the narrows of Birch Lake. It is about 6 meters west of a small rock knob. Its elevation above the lake is about 25 meters.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 849 (Minnesota, Lake County; E. R. Martin, 1916).—On the south shore near the east end of Birch Lake. The station is on the point about one-half mile below Carp Portage. It is about 1.5 meters back from the water and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 850** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south side of the stream between Birch and Carp Lakes. The station is about 30 meters above the Birch Lake pier at the mouth of the stream. It is between the stream and the portage trail on a rock ledge about 4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 851** (Ontario, Rainy River District; E. R. Martin, 1916; 1921).--At the head of Birch Lake, about 180 meters below the Carp Portage Dam and about 100 meters from where the sluiceway joins the main lake. The station is on a ledge about 30 meters back from the water and about 10 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 852 (Minnesota, Lake County; E. R. Martin, 1916).—On the south side of the sluiceway at Carp Portage between Carp and Birch Lakes. The station is on a rock knoll about 15 meters from the sluiceway and about 10 meters above it. It is north of the portage trail about 100 meters from Birch Lake. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 853** (Minnesota, Lake County; E. R. Martin, 1916).—At the head of Birch Lake on the south side of the stream from Carp Lake. The station is on a rock outcrop about 60 meters below the dam, about 25 meters from the sluiceway, and about 10 meters above the water. The portage trail passes to the north of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 854** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—At the outlet of Carp Lake. The station is on a smooth ledge 9 meters from the sluiceway of the Carp Lake Dam, and beside the trail leading from the dam to Birch Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 855 (Ontario, Rainy River District; E. R. Martin, 1916; 1921).—On the north side and at the head of the narrows between Carp and Birch Lakes. The station is on outcropping rock on a little knoll just above and overlooking the dam. It is about 10 meters from the water's edge and about 8 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 856 (Ontario, Rainy River District; E. R. Martin, 1916; 1921).—On the north shore of the point at the entrance to the stream flowing out of Carp Lake. The station is on an outcrop of rock about 10 meters from the point, about 11 meters from the water and less than a meter above the lake level. It is about 125 meters above the Carp Portage Dam.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 857 (Minnesota, Lake County; E. R. Martin, 1916; 1921).—On the south shore at the foot of Carp Lake. The station is on the point about 150 meters above the dam at Carp Portage. It is on an outcrop of rock about 15 meters south of the tip of the point and about 10 meters from the water's edge. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 858 (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the west shore of Carp Lake. The station is on the long peninsula that cuts off the most southern bay of the lake. It is about 700 meters east of Carp Portage and about 600 meters west of the mouth of Knife River. It is on the summit of the ridge, near the middle of the peninsula, and about 15 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 859** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north shore of Carp Lake, north 68° east, 750 meters from Carp Portage, and about 700 meters northwest of the mouth of Knife River. The station is on the southwestern point of the peninsula that cuts off the boundary bay from the rest of the lake. It is on the south side of the low point, a few meters from the water's edge, and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 860 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On Carp Lake, on a very small island about 180 meters northwest of the outlet of Melon Lake. The station is about 3 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 861 (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south side of Carp Lake, about 550 meters southwest of the outlet of Melon Lake. The station is on the brow of a very steep hill, about 30 meters above the lake level and about 80 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 862** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On Carp Lake, about 90 meters south and 90 meters east of the outlet of Melon Lake. The station is on the most southeastern bare ledge on the knoll. It is about 45 meters west of the southwest shore of Melon Lake and about 22 meters south of the wagon trail.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 863 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the shore of Carp Lake, about 30 meters north of the lower end of the rapids at the outlet of Melon Lake. The station is about 8 meters above the water, on the summit of the bare rock knoll.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 864 (Ontario, Rainy River District; E. R. Martin, 1916).—At the head of Carp Lake. The station is on the hill about 125 meters northeast of the "lift" between Melon and Carp Lakes. It is on a high rock cliff about 20 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 865 (Minnesota, Lake County; W. B. Fairfield, 1913; 1916).—On the south shore of Melon Lake near the east end. The station is about 100 meters south of the rapids at the head of the lake. It is on a rough, upturned ledge, about 6 meters above the lake and about 6 meters back from the shore line. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 866** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the north side of Seed Lake, about 75 meters north of the second rapids above Carp Lake and at the head of Melon Lake. The station is on the highest point of rock on the hill and is about 50 meters back from and 18 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 867** (Minnesota, Lake County; E. R. Martin, 1916; 1921).—On the east shore of Melon Lake, about 400 meters above Carp Lake. The station is on the point about 50 meters below the "lift" between Seed Lake and Melon Lake. It is on a ledge about 8 meters from the water and 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 868** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the north side of Seed Lake. The station is about 225 meters northeast of the dam at the outlet of the lake, on the top of the hill 50 meters back from the water's edge and about 20 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 869 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south side of Seed Lake, about 220 meters upstream from the dam at the outlet of the lake. The station is on the brow of a steep hill, about 30 meters back from the water's edge, and 18 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 870** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1916).—On the north shore of Seed Lake. The station is about 1,200 meters west of Knife Lake, and about 500 meters northeast of the rapids at the foot of Seed Lake. It is just west of a rock knob on the summit of the hill, about 30 meters back from the shore line, and about 15 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 871 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the east side of Seed Lake near the center of the small round peninsula at the entrance to the lake. The station is about 30 meters west of the lower end of Big Knife Portage at the highest point of the peninsula. It is about 6 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 872 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south shore of Seed Lake, about 110 meters west of the dam at the entrance to the lake, and just south and opposite the lower end of Big Knife Portage. The station is on a rock on a cleared soil-covered spot halfway between the lake and the adjacent steep hillside. It is about 7 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 873 (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south bank of Portage Lake about 650 meters downstream from Knife Lake. The station is on the bench 20 meters back from the river and 1 meter north of a trail at the foot of the hill. It is on a white granite rock about 0.3 by 0.9 meter in size.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 874 (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the north side of Portage Lake near its western end about 700 meters below Knife Lake. The station is on the north side of the Big Knife Portage trail about 190 meters east of its lower end, about 12 meters back from the shore, and about 3 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 875 (Ontario, Rainy River District; E. R. Martin, 1916; 1921).—On the north shore of Portage Lake and about 600 meters below Knife Lake. The station is on the west side of a little bay about 180 meters above the "lift" between Portage Lake and Seed Lake. It is about 15 meters from the water and about 1.5 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 876** (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On the north shore of Portage Lake about 400 meters below Knife Lake. The station is on the knoll that is about 200 meters downstream from the lower or second dam in the first rapids of the river. The portage trail runs to the north of the knoll. The station is on the highest rock point of the knoll, about 8 meters back from the shore and about 4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 877** (Minnesota, Lake County; W. B. Fairfield, 1913; 1921).—On the south shore of Portage Lake, about 320 meters below Knife Lake. The station is on a rock knoll about 6 meters east of the lake shore and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 878 (Minnesota, Lake County; E. R. Martin, 1916; 1921).—On the south bank of the stream between Knife and Portage Lakes about 250 meters below Knife Lake. The station is on a ledge about 10 meters from the river and about 4.5 meters above the first "lift" below the Knife Lake Dam.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 879** (Ontario, Rainy River District; E. R. Martin, 1916).—On the north side of Portage Lake about 300 meters below the dam at the outlet of Knife Lake. The station is on a ledge about 10 meters north of the portage wagon road and about 50 meters above where the road first comes down to the river below the dam.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 880** (Ontario, Rainy River District; E. R. Martin, 1916; 1921).—On the north side of the stream between Knife and Portage Lakes about 240 meters below the dam at the outlet of Knife Lake. The station is on a ledge on the slope about 40 meters north of the wagon road and nearly opposite the "lift" at the east end of Portage Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 881** (Minnesota, Lake County; E. R. Martin, 1916).—On the south side of the stream between Knife and Portage Lakes about 40 meters back from the river and about 200 meters below the Knife Lake Dam. The station is on a ledge a little upstream and about 60 meters distant from the "lift" at the east end of Portage Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 882 (Minnesota, Lake County; W. B. Fairfield, 1912; 1921).—At the extreme west end of Knife Lake, on the highest part of the rocky point on the south side of the outlet of the lake and just below the dam. The station is on the bare, solid ledge on the summit of the hill overlooking the dam. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 883** (Ontario, Rainy River District; E. R. Martin, 1916; 1921).—At the west end of Knife Lake, on the north side of the stream between Knife Lake and Portage Lake. The station is about 45 meters north of the shore at a point about 75 meters below the Knife Lake Dam and just north of the first rapids. It is on a ledge of rock about 15 meters above the river.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 884** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—At the west end of Knife Lake, about 100 meters north of the dam across the outlet of the lake. The station is on a granite knoll on the summit of the ridge.

Station mark: A standard 8-inch manganese-bronze reference post set in a ledge.

**Reference Monument 885** (Minnesota, Lake County; E. R. Martin, 1916; 1921).—At the west end of Knife Lake. The station is on a cliff about 60 meters southeast of the dam at the outlet of the lake and about 40 meters from the lake shore at the nearest point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 886** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On Knife Lake, about 1,400 meters east of the extreme west end of the lake. The station is on the west end of the large island that lies just south of the west end of the very large anvil-shaped island that chokes the channel of the lake. It is about 10 meters east of the point of the island, and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 887 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake about three-fourths mile above Knife Dam near the outlet of the lake. The station is on the shore line about 375 meters northwest of the west end of the long anvil-shaped island in this part of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 888** (Ontario, Rainy River District; E. R. Martin, 1916).—In the western part of Knife Lake, on the south side of the small island lying at the west side of the outside entrance to Back Bay. The station is about 100 meters west of the extreme eastern end of the island, on a large, solid rock on the hill-side, about 16 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A cross within a triangle marking triangulation station "Edna" is south  $21^{\circ} 42'$  east, 10.9 meters from the station.

**Reference Monument 889** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On Knife Lake, about 1½ miles east of Big Knife Portage. The station is on the easternmost point of the large anvil-shaped island that chokes the channel of the lake. The station is on a large fixed rock about 4 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 890** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On Knife Lake, about 2 miles east of Big Knife Portage. The station is on a small, lone island that lies about 100 meters off the south shore of the lake and 700 meters east of the large anvil-shaped island that chokes the channel of the lake. It is

on the highest part, about midway of the island east and west, about 8 meters south of the north shore and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the granite ledge.

**Reference Monument 891** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake and on the south shore of the large irregular-shaped peninsula that incloses Back Bay. The station is about 250 meters east of the southwestern point of the peninsula and is directly opposite a small island lying off the south shore of the lake. It is on a large fixed rock about 3 meters from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 892** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake, on the eastern point of the irregular-shaped peninsula that incloses Back Bay. The point is grassy and is used as a camping ground, and from it one can look eastward between two small islands straight up the long southern arm of the lake. The station is on the highest point of the ledge that rises from the shore, 6 meters back from the water's edge, and 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 893** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On Knife Lake, on the west end of the large island lying off the south shore west of the entrance to the long southern arm of the lake, and opposite the peninsula which incloses Back Bay. The station is about 100 meters northeast of the most western point of the island, on a ledge outcrop, about 8 meters from the water's edge, and about 6 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 894** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake, on the prominent granite point opposite the entrance to the most western of three large southern bays or arms of the lake. The station is on the rise of the granite ledge, about 6 meters from the water's edge, and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 895** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of Knife Lake, on a point of the shore about 400 meters northeast of the point at the eastern side of the entrance to the most western of the three large southern bays or arms of the lake. The station is on top of a ledge, about 15 meters back from the shore line, and 6 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 896 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake, on a little point of the shore line north of the point of the south shore that is at the east side of the entrance to the western one of the large southern bays or arms. The station is on the solid granite ledge of the point, about 2 meters back from the edge of the water, and about 2 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 897** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake, on the small rocky peninsula opposite the west side of the entrance to the middle one of the three large bays or arms of the south side of the main body of the lake. The station is on the highest point

of the peninsula, on a solid granite ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 898** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of Knife Lake, on the point on the west side of the entrance to the middle one of the three large bays or arms on the south side of the main body of the lake. The station is on the granite ledge of the point, close to the water's edge. The ledge appears white from a distance.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 899** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of Knife Lake, on the rocky point 350 meters southwest of the narrows separating the eastern part known as Little Knife Lake from the main body of the lake. The station is on the rounded part of a ledge, about 2 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 900** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On Knife Lake, on a small rocky island that lies about 700 meters northwest of the narrows that separates the eastern part known as Little Knife Lake, from the main body of the lake. The station is on the cliff on the southwest part of the island, 3 meters back from the edge of the cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

438

**Reference Monument 901** (Ontario, Rainy River District; E. R. Martin, 1916; 1921).—On the north shore of Knife Lake at the narrows between the two parts of the lake. The station is just above the narrows, on a rock point that becomes an island at high water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 902 (Minnesota, Lake County; E. R. Martin, 1916; 1921).—On the south shore of Knife Lake about 200 meters above the narrows separating the two main arms of the lake. The station is opposite the low rock point upon which reference monument 901 is situated. It is on a rock outcrop near the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 903** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south side of Knife Lake, on a point of the shore about 340 meters east of the narrows that separate the eastern part, sometimes called Little Knife Lake, from the main body of the lake. The station is on the west edge of a granite ledge, about 3 meters from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 904 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north side of Knife Lake, on the long narrow point that forms the north side of the narrows separating the eastern part of the lake, known as Little Knife Lake, from the main body of the lake. The station is on a rocky knoll on the summit of the ridge, 230 meters east of the tip of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 905** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake, near the west end of the eastern part of the lake, sometimes called Little Knife Lake. The station is on a little rocky point about 750 meters northeast of the narrows that divides the eastern portion from the rest of the lake. The station is on the granite ledge that rises from the water's edge; about 2.4 meters back from the shore line, and 0.9 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 906** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of Knife Lake, near the western end of the eastern part of the lake, sometimes called Little Knife Lake. The station is on the bold bluff on the rocky point 650 meters northeast of the narrows that separates the eastern part of the lake from the main body. It is on top of the bluff, on the solid granite ledge, 6 meters back from the shore line, and 4.3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 907 (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of Knife Lake, on a point of the shore line about 1,750 meters southwest of Little Knife Portage and about 420 meters northeast of the point where the lake widens out into a large bay on the south shore. The station is on the smooth granite ledge about 2 meters from the water's edge and about 0.5 meter above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 908** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1916).—On the north shore of Knife Lake, on the rounded point between two rather large bays near the middle of the eastern section of the lake, sometimes called Little Knife Lake. The station is on the highest part of the smooth rounding ledge, about 6 meters back from the water's edge, and 4.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 909 (Minnesota, Lake County; W. B. Fairfield, 1912; 1921).—On the east end of Knife Lake. The station is on the point on the east side of the narrow entrance from Cypress Lake. It is on a rock on the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 910** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the extreme east end of Knife Lake, and just west of the southwest end of the eastern portage from Cypress Lake. The station is on the smooth level top of the low rock cliff, about 2.5 meters back from the edge of the cliff and 6 meters above the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 911** (Ontario, Rainy River District; E. R. Martin, 1916).—On the west shore of the connecting stream between Cypress and Knife Lakes. The station is on the elbow of the shore of the little pond just above the narrows leading into Knife Lake. There is a projecting point of the shore opposite. The station is about 50 meters back from the shore and about 15 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a ledge.

Reference Monument 912 (Minnesota, Lake County; E. R. Martin, 1916; 1921).—On the east shore of the connecting stream between Cypress and Knife Lakes, about 200 meters upstream from the outlet into Knife

Lake. The station is on the high rock point in the bend of the stream above the last pond or bay. It is about 40 meters back from the shore and about 10 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

**Reference Monument 913** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—On the extreme west end of Cypress Lake, on the western and smaller of the two islands about 450 meters north of Little Knife Portage. The station is on a rocky bluff, about 4.5 meters south of the shore line, and about 6 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 914 (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of the most western narrows in Cypress Lake. The station is on the top of the rocky knoll, about 15 meters above the water, about 18 meters from the narrows, and about 20 meters from the bay shore. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 915** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—On the north shore of the extreme western end of Cypress Lake, about 130 meters north of the smaller and more western of the two islands lying north of the entrance to the boundary stream flowing into Knife Lake. The station is on a rock shelf, about 2.5 meters back from the shore and about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 916** (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore at the west end of Cypress Lake. The station is on the point 300 meters north of the eastern portage to Knife Lake and about 300 meters east of the most western narrows in Cypress Lake. It is on an outcrop of ledge, about 4 meters from the extreme point, and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 917 (Ontario, Rainy River District; E. R. Martin, 1916; 1917).—On the north shore of the narrows in the west end of Cypress Lake. The station is on a high cliff, 22 meters above the water, and 8 meters back from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in the rock, marking triangulation station "Chafe," is north 76° east, 2.7 meters from the station.

**Reference Monument 918** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Cypress Lake, on the point directly south of the large island about 1 mile northeast of Little Knife Portage. The station is on a bare ledge, about 6 meters back from the shore, and 15 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A drill hole within a triangle cut in the ledge, marking triangulation station "Duet," bears north  $73^{\circ}$  41' west, 5.1 meters from the monument.

**Reference Monument 919** (Ontario, Rainy River District; E. R. Martin, 1917).—On the north shore of the west end of Cypress Lake, about 200 meters east of the most western narrows in the lake. The station is about 9 meters back from the shore and about 12 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in the rock, marking triangulation station "Cere," is north  $60^{\circ}$  24' east, 4.8 meters from the station.

**Reference Monument 920** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south side of Cypress Lake, on the north point of the high, timbered ridge that rises from the lake where it makes the turn to the south before entering the last straight stretch to Knife Lake. The station is about 400 meters a little south of east of the small island in the lake. It is on a shoulder of the ridge, a little below the highest point, and about 100 meters back from the lake shore.

Station mark: A standard 8-inch manganese-bronze reference post set in a solid granite ledge.

**Reference Monument 921** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore of Cypress Lake, on the point 600 meters east of the western narrows of the lake, and across the lake nearly north from the eastern portage into Knife Lake. The station is on top of the cliff, about 30 meters back from the water's edge, and about 3 meters back from the edge of the cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid ledge.

**Reference Monument 922** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Cypress Lake, near the middle of the lake, a little above a bay of the north shore, and about 200 meters northeast of the southwestern end of a long tangent of the shore line. The station is on a rock about 1 by 2 meters in size, 1 meter above the lake level, and 1 meter back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 923** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On Cypress Lake, about 1 mile northeast of Little Knife Portage. The station is on the south side of a large island. It is about

440

6 meters back from the shore, 30 meters from the west end of the island, about 12 meters above the water, and on the highest point on this part of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 924** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Cypress Lake, about midway between the ends of the lake. The station is on a narrow point of land about 1 meter high, about 400 meters west of a very prominent cliff, the face of which is at right angles to the shore line and toward the station. It is on a rock about 5 meters from the tip of the point and about 1.5 meters south-east of the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 925** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On Cypress Lake, about 1½ miles east of Little Knife Portage. The station is on the small island that lies at the beginning of the southern bend of the lake. It is 8 meters north of the point of the island, 3 meters east of the west shore, and 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 926** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Cypress Lake, about 1,100 meters west of the first narrows west of Swamp Portage. The station is on the solid ledge at the edge of the timber on the highest part of a bare and high rock cliff about 150 meters east of the very conspicuous cliff whose face is transverse to the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 927** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore of Cypress Lake, about 1¾ miles northeast of Little Knife Portage, and about 500 meters northeast of a small island. The station is on a rough flat rock about 1.3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 928** (Minnesota, Lake County; W. B. Fairfield, 1912; 1921).—On the south shore of Cypress Lake, at the east end of the first narrows west of Swamp Portage. The station is on the highest point of the rocky west end of a small island that lies just offshore.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock.

**Reference Monument 929** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore of Cypress Lake, near the middle of the lake, and about 1,600 meters west of the eastern narrows of the lake. The station is on the top of the high cliff opposite a small narrow tongue of land that makes out from the south shore of the lake. It is on a solid ledge about 6 meters back from the edge of the cliff and just at the edge of the timber.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 930** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Cypress Lake, about 600 meters east of the first narrows west of Swamp Portage. The station is on a rocky, timbered point of the shore line that extends some 200 meters into the lake, and forms the northern side of a bay. It is on the solid rock ledge, about 4.5 meters back from the point of the shore line and 3 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 931** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore of Cypress Lake, about 1,100 meters west of the first narrows west of Swamp Portage. The station is on top of the high rock cliff at the east end of the line of cliffs along this part of the north shore. The station is almost in line with the face of the very prominent cliff which is at right angles to, and just back from the south shore of the lake. It is on a solid ledge back from and above the face of the cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 932** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Cypress Lake, about 1,200 meters west of the east end of the lake. The station is on a prominent point of the shore line, on the highest part of a rounded granite ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 933** (Ontario, Rainy River District; E. R. Martin, 1917; 1921).—On the north shore of Cypress Lake, opposite the first narrows below and west of Swamp Portage. The station is on a rock cliff about 15 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 934 (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south side of Cypress Lake, about 800 meters from the east end of the lake. The station is on the summit of the high rocky

hill that is opposite the entrance to the first large bay on the north shore of the lake. The station is about 100 meters from the shore to the westward, and 150 meters from the shore to the northward.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid granite ledge of the summit.

Reference Monument 935 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north side of Cypress Lake, about 1,200 meters west of the east end of the lake. The station is about 180 meters west of the shore of the bay to the east of it, and about 100 meters due north of the shore of a little cove on the outside shore line. It is on the first bench of the rugged cliffs about 36 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid granite ledge.

**Reference Monument 936** (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore and at the east end of Cypress Lake. The station is on the high rocky hill about 250 meters west across the little bay from Swamp Portage. It is about 90 meters back from the shore line on the solid granite ledge of the summit of the hill.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 937** (Ontario, Rainy River District; E. R. Martin, 1917).—On the eastern part of Cypress Lake about one-half mile west of Swamp Portage. The station is on the highest part of a small island lying in the most eastern bay of the north shore of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 938** (Minnesota, Lake County; W. B. Fairfield, 1912; 1921).—Near the west end of Swamp Portage between Swamp Lake and Cypress Lake. The station is on a smooth granite ledge about 40 meters from Cypress Lake and about 2 meters south of the portage trail.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A 5-foot bronze post marking boundary monument 1 is 3.7 meters east of the reference monument.

Reference Monument 939 (Ontario, Rainy River District; E. R. Martin, 1917; 1921).—Near the east end of Cypress Lake about 300 meters west of Swamp Portage. The station is about 50 meters back from the north shore line of the narrows, on a ledge that slopes toward the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 940** (Minnesota, Lake County; W. B. Fairfield, 1912; 1921).—At the extreme west end of Swamp Lake, about 50 meters southeast of the east end of the Swamp Portage trail. The station is on a little rock knoll, about 3.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 941** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—On the north shore of the west end of Swamp Lake, about 150 meters east of the extreme west end of the lake, and directly opposite the small island at the end of the lake. The station is about 5 meters back from the shore and 9 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in outcropping rock.

Reference Monument 942 (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).—On the south shore of Swamp Lake, about 300 meters east of the extreme west end of the lake. The station is on a cliff, 3 meters from the top and 1.5 meters from the edge of the cliff. It is about 12 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 943 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore of Swamp Lake, about 340 meters east of Swamp Portage, on a little point at the east end of the narrow western part of the lake. The station is about 5 meters from the shore line and 3 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in rock.

**Reference Monument 944** (Minnesota, near boundary line between Cook and Lake Counties; W. B. Fairfield, 1912; 1917).—On the top of the knoll about 70 meters south of the short portage on the east side of Swamp Lake. The station is on the solid ledge about 18 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 945** (Ontario, Rainy River District; E. R. Martin, 1917; 1921).—On the east side of Swamp Lake, 22 meters north of the outlet of the lake into Saganaga Lake. The station is on the top of a knoll 10 meters east of the lake shore.

Station mark: A standard 8-inch manganese-bronze reference post set in rock. A bronze disk marking triangulation station "Cartoon" is south 16° 45′ west, 21 meters from the station.

**Reference Monument 946** (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—Near the west end of Saganaga Lake, on the point south of the narrows next east of and 450 meters from the mouth of Swamp Lake.

The station is on the higher and more southern of the two bare rock hills on the point. It is about 70 meters south of the sharp interior angle of the shore line, and about 15 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 947 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—Near the west end of Saganaga Lake, on the point on the north side of the narrows next east of and 330 meters from the mouth of Swamp Lake. The station is on the rock point about 2.5 meters from and 2.5 meters above the lake shore Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 948** (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—At the extreme western end of Saganaga Lake, on the north point of the island that lies just southwest of the second narrows west of the main body of the lake. The station is on a bare sloping ledge point, about 9 meters back from the shore line, and 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 949** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—At the extreme western end of Saganaga Lake, at the west end of the second narrows west of the main body of the lake. The station is on the summit of the rounded knoll on the point lying between the narrows and the bay to the west. It is on a rock, about 10 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 950 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—At the extreme western end of Saganaga Lake, on the south side of the second narrows west of the main body of the lake, and about 250 meters west of the east end of the narrows. The station is on a knoll, about 15 meters above the water level and dirctly overlooking the shore to the west. It is on a conglomerate rock whose surface is about level with the ground.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 951** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—At the extreme west end of Saganaga Lake on the north shore of the second narrows west of the main body of the lake. The station is on a prominent knoll about midway between the ends of the narrows and just back from a small bay. It is on a rough-topped rock.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

**Reference Monument 952** (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—At the extreme west end of Saganaga Lake, at the east end of the second narrows west of the main body of the lake. The station is on the neck of land that forms the Minnesota side of the entrance to the narrows. The station is about 45 meters south of the north end of the neck, about 60 meters west of the east side, and 9 meters east of the west side of the neck. It is about 15 meters above the level of the lake, on outcropping rock, with several large loose bowlders near it.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 953** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—At the extreme west end of Saganaga Lake, at the east end of the second narrows west of the main body of the lake. The station is on the long neck of land that forms the Canadian side of the entrance to the narrows. It is about 70 meters north of the point of the neck, 50 meters from the shore on the east, and 10 meters from the shore on the west side of the neck. It is about 8 meters above the water level on a small triangular rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 954 (Minnesota, Cook County, W. B. Fairfield, 1912; 1917).—On the south shore near the west end of Saganaga Lake. The station is on the point 500 meters northeast and across a bay from the second narrows west of the entrance to Cache Bay. It is on the rock point 12 meters above the water and 4 meters back from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 955** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore near the west end of Saganaga Lake. The station is on the point 450 meters northeast of the second narrows west of the entrance to Cache Bay. The station is on outcropping limestone and sandstone nearly flush with the ground. It is about 4 meters back from a point of the cobblestone shore and about 2 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 956** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the south shore near the west end of Saganaga Lake, on the prominent point about 650 meters southwest of the first narrows west of the entrance to Cache Bay. The station is on a granite ledge about 8 meters back from the shore line and about 4 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 957 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north shore of Saganaga Lake near the west end of the lake. The station is on the peninsula 570 meters west of the first narrows west of the entrance to Cache Bay. It is 12 meters back from the south shore of the peninsula and about 12 meters above the lake level, on the summit of the eastern one of two high points.

Station mark: A standard 8-inch manganese-bronze reference post set in outcropping sandstone.

Reference Monument 958 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—In the west end of Saganaga Lake, on a small island in the bay 400 meters southwest of the first narrows west of the entrance to Cache Bay. The island is about 150 meters offshore and another small island lies between it and the shore. The station is on a granite ledge at high-water mark on the northeast end of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 959 (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—On the north shore of Saganaga Lake near the west end of the lake. The station is on the north point at the first narrows west of Cache Bay. It is on the top of the bluff, on the solid ledge, 14 meters above the level of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 960 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—On the south shore of Saganaga Lake near the western end of the lake. The station is on the south point at the first narrows west of the entrance to Cache Bay. It is on top of the bluff about 50 meters back from the shore line. Station mark: A standard 8-inch manganese-bronze reference post set in a solid granite ledge.

**Reference Monument 961** (Ontario, Rainy River District; W. B. Fairfield 1912; 1917).—On the north shore of Saganaga Lake, about 2,300 meters east of the mouth of Cache Bay. The station is on the summit of a high, bare, rocky knoll, about 50 meters back from the lake shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock.

**Reference Monument 962** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the south shore of Saganaga Lake near the west end of the lake, on the prominent rocky point about three-fourths mile west of Rocky Point, and about 1 mile due east of the entrance to Cache Bay. The station is on the solid granite ledge about 3 meters back from the shore line and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 963** (Ontario, Thunder Bay District; E. R. Martin, 1917).—In Saganaga Lake about 5 miles east of the west end of the lake. The station is on the west end of a small island which is the most northwestern of a large group of islands lying southeast of the large open body of the west part of the lake. It is on the rock ledge about 2.5 meters above high water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 964** (Minnesota, Cook County; E. R. Martin, 1917).—On Saganaga Lake about 5 miles east of the west end of the lake. The station is on the northwest end of a small island just south of the most northwestern island of the large group lying southeast of the open water of the western part of the lake. It is on a ledge near the shore line, and is about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 965** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On Saganaga Lake about 5 miles east of the west end of the lake. The station is on the southwest point of a small island lying north of the middle of a very large irregularly shaped island. It is on a ledge about 4.5 meters back from the shore line and about 7.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 966** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On Saganaga Lake about 5 miles east of the west end of the lake. The station is on the very large irregularly shaped island lying just south of the international boundary line at the east side of the large open western part of the lake. It is on the western point of a small peninsula projecting from the northeast point of the island, on a rock ledge 6 meters back from the water and about 0.7 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 967** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, on the north side of a small rocky wooded island that lies on the south side of the open water of the main body of the lake. The island is the third one from the west end of the fringe of islands that border the southern side of the open water of the lake. The station is on a rocky point that projects into the lake, 4.5 meters back from the water's edge, and 3 meters above the lake level. A very large rock lies just off the point in front of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 968 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On Saganaga Lake about 6 miles east of the west end of the lake. The station is on the north side of a large island facing the open

water of the lake. It is on a rock ledge about 6 meters above the water and about 4.5 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 969 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, on the extreme west end of the most western of the eastern group of islands in the main body of open water of the lake, and near the middle of the main body. The island is a breeding place for gulls. The station is on a solid granite ledge, about 8 meters from the tip of the point, and 3 meters above the level of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 970** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, on the summit of the hill on the northern part of the large triangular island that lies just southwest of the narrow passage through which the international boundary running westward first passes out into the open water of the main body of the lake. The station is on the highest part of the solid granite ledge of the hilltop.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 971** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, on the west end of a very rocky wooded island that lies in the open water of the lake about 1,000 meters north from where the international boundary passes out from among the islands into the open water of the lake. The station is on the smooth granite ledge on the point of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 972** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On a small island in the eastern part of Saganaga Lake, about 3,400 meters north 73° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the northeast end of a small narrow island whose greatest length is about 140 meters in a northeast and southwest direction. The island lies in the narrow passage from the mouth of the stream to the open lake in which the boundary lies, and is about 700 meters south along this passage from the open lake. The station is on the solid granite ledge, about 8 meters back from the water's edge, and 1.2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 973** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, on a small, but high, rocky island about 150 meters in diameter that lies on the east side of the passage through which the international boundary running westward first passes out into the open water of the main body of the lake. The island is the second one of any size on this side of the boundary, southeast of the open water. It lies just west of the most western point of the largest island in the lake. The station is on the west side of the island, on a rock bluff, near the edge of the bluff, and 12 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 974 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On a large island in the eastern part of Saganaga Lake, about 3,000 meters north 75° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the northeast corner of the large split island that lies southwest of the largest island in the lake. It is on a moss-grown rock ridge measuring about 1 by 1.5 meters. It is 4 meters back from the shore line and about 4.5 meters above the lake level. A meander-corner witness tree marked "M.C." stands near the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 975 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the southwesternmost point of the largest island in the northeastern part of Saganaga Lake. The station is on a small round bowlder in the middle of a rounded point, about 6 meters from the shore line and 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 976** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On an island in the eastern part of Saganaga Lake, about 2,200 meters north 75° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The island is a lone island about 250 meters in diameter and lies about 300 meters off the southern point of the largest island in the lake. The station is on the northeastern part of the island, in the woods, about 40 meters from the shore and 6 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

**Reference Monument 977** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, about 2,300 meters north 66° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on a small island which lies about 40 meters off the south shore of the largest island in the lake, some 400 meters east of its west end. It is on a flat rectangular rock about 1 meter across either way, and is about 1 meter off the shore line near high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 978 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On Saganaga Lake, about 1,400 meters north 20° west from the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the northeast point of the first very large island that lies on the west side of the east channel leading from the mouth of the stream to the main body of the lake. The station is on a rock about 0.6 meter across, about 2 meters back from the shore line, and 2.5 meters above the level of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 979** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the eastern shore of Saganaga Lake, about 1,800 meters north 25° west of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The station is on the rounding point of the mainland just east of the entrance to a long narrow passage running north and south between the mainland and the largest island in the lake. It is on a flat-topped rock about 0.6 by 0.9 meter in area, near the shore line, and 0.3 meter below the high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 980** (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—At the head of Saganaga Lake, on the southeast point of a very large island, and 950 meters north 15° west from the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The station is on a knoll about 75 meters west of the extreme east end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 981 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).—Near the head of Saganaga Lake, on a rock about 3 by 5 meters that rises from the water to an elevation somewhat above high-water mark, and lies just offshore to the west of a small wooded island. The rock is 1,500 meters north 15° west of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake, and is in the narrow passage to the east of the first large island in the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 982** (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—At the head of Saganaga Lake, on the elongated eastern end of an island which is about 100 meters across, lying in the entrance to the bay which is just west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the highest point of a rock, about 0.6 meter south of a crack in the rock about 0.3 meter wide. It is 2.5 meters north of the shore line and 2.5 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 983 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the east shore of Saganaga Lake, about 1,000 meters north  $5^{\circ}$  east from the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the point of the mainland at the north side of the entrance to the large eastern arm of the lake and on the east side of the east channel leading to the main body of the lake. The station is about 18 meters east of a rounded granite ledge point about 4 meters high. It is on top of a moss-covered granite ledge, 3 meters back from the shore line, and 3.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 984 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—On the west bank of Saganaga Falls, at the head of Saganaga Lake. The station is about 15 meters from the upper landing place and 30 meters from the lower landing place. It is on a surface outcrop of a white granite ledge, almost at the edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 985** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).—At the head of Saganaga Lake, on a very small rocky island, just east of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The island is about 50 meters north of the point of the mainland. The station is on a pointed white granite rock, which is east of a larger and loose granite rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 986** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the west bank of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes. The station is about 150 meters upstream from the falls and about 120 meters west of the foot of the first narrows above the falls. It is near high water-mark and near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in the rock, marking station "Ding," bears north  $6^{\circ}$  02' east, 14.4 meters from the monument.

Reserve Monument 987 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).—On the east side of Saganaga Falls, at the head of Saganaga Lake. The station is on the highest part of a granite ledge, 30 meters east of the shore line and 12 meters above the level of the water at the head of the falls.

446

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 988 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917) .- On the west bank of the stream connecting Maraboeuf (Gneiss) and Saganaga Lakes, on the point at the lower end of the first narrows upstream and 300 meters distant from Saganaga Falls.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock. A drill hole within a triangle cut in a rock about 1 by 2.5 meters, marking triangulation station "Dike," bears north 83° 05' east, 21.3 meters from the monument.

Reference Monument 989 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917) .- On the east shore of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes. The station is just around the bend and 150 meters upstream from Saganaga Falls. It is on a rock 0.4 by 0.6 meter in size, 3.5 meters back from the shore line, and 0.6 meter above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 990 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).-On the west shore of the stream connecting Maraboeuf (Gneiss) Lake and Saganaga Lake, on the point at the upstream end of the narrows above Saganaga Falls and about 400 meters from the falls. The station is on a granite ledge 8 meters back from the shore line and 9 meters above the level of the water. Back of the station the ledge rises 3 or 4 meters higher.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 991 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).-On the east side of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes, about 300 meters upstream from Saganaga Falls and at the lower end of the first narrows above the falls.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop.

Reference Monument 992 (Minnesota, Cook County; E. R. Martin, 1917) .- On the west bank of the stream flowing out of Maraboeuf (Gneiss) Lake, 320 meters below Horsetail Rapids on a point covered with loose granite rocks, about 20 meters from the extreme end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop. A drill hole within a triangle cut in the rock, marking triangulation station "Dense," is south 55° east, 20 meters distant from the monument.

Reference Monument 993 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).-On the east shore of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes, 400 meters upstream from Saganaga Falls, just at the upstream end of a very narrow reach of the stream. The station is on a rough granite ledge 2.5 meters back from the water's edge and 3 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 994 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921) .- On the west bank of the stream, 100 meters below Horsetail Rapids at the north end of Maraboeuf (Gneiss) Lake. The station is 2 meters back on the slanting top of a precipitous cliff which rises from a line 4 meters back from the shore. It is 15 meters above the water at the foot of the rapids.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 995 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).-On the east bank of the stream flowing out of Maraboeuf (Gneiss) Lake, 300 meters downstream from Horsetail Rapids. The station is on a granite rock 3 meters back from the shore line and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 996 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917) .- At the north end of Maraboeuf (Gneiss) Lake, on the west bank of Horsetail Rapids, about 200 meters downstream from the lake. The station is about 12 meters above the head of the rapids and about 9 meters back from the most western channel of the rapids.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 997 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).-On the east bank of the stream, 100 meters below Horsetail Rapids at the north end of Maraboeuf (Gneiss) Lake. The station is on top of the cliff, 2 meters east of the edge, 6 meters east of the shore, and 12 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 998 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).--At the north end of Maraboeuf (Gneiss) Lake, on the west bank, and 130 meters above the narrows of Horsetail Rapids. The station is on a sloping granite point fringed with jack pines, about 15 meters north of the shore line to the south, 15 meters west of the shore line to the east, and 6 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 999 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—At the north end of Maraboeuf (Gneiss) Lake, on the east bank of Horsetail Rapids, about 200 meters downstream from the lake and at the lower end of the rapids. The station is about 9 meters back from the shore, 18 meters above the water at the foot of the rapids, and is on a cleared space on the highest point of the rocks. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1000 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917) .- On the west shore of Maraboeuf (Gneiss) Lake, about 3,000 meters south of Saganaga Lake. The station is on the point at the west side of the narrow entrance to a wide expanse of the lake. It is on a ledge near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1001 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).-At the north end of Maraboeuf (Gneiss) Lake, on the east side, and 50 meters upstream from Horsetail Rapids. The station is just up the hill from the upstream end of the portage trail, on a granite rock, 10 meters back from the shore line and 9 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1002 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).-On the west shore of Maraboeuf (Gneiss) Lake, at the north end of the first narrow north-and-south reach of the lake as approached from the south. The station is on the granite point just south of the entrance to the deep inlet which, with the like inlet on the opposite side, terminates this first narrows. The station is about 4 meters back from the lake shore and 5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1003 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917) .- On the east shore of Maraboeuf (Gneiss) Lake, on the middle point in the narrows north of the entrance to the northern, and larger, long eastern arm of the lake. The station is opposite a little half-circle bay of the west shore. It is on a rock about 3 meters back from and 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1004 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917) .-- On the west shore of Maraboeuf (Gneiss) Lake, on the point just south of the south end of the long north reach of the lake, and also just south of the most southern long western arm of the lake. The station is on the east side of the point, about 100 meters south of the most northern shore of the point, about 40 meters west of the east shore of the point, and about 18 meters above the lake level. It is in an exposed flat surface of granite about 1.5 by 2.1 meters in extent.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1005 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).-On the east shore of Maraboeuf (Gneiss) Lake, at the north end of the first narrow north-and-south reach of the lake as approached from the south. The station is on the point 120 meters south of the first big bay on the east side of the lake. The island in the entrance to the bay is about 250 meters due north from the station. The station is on a granite ledge about 9 meters back from the shore and 6 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1006 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).-On the south shore of Maraboeuf (Gneiss) Lake, on the point at the east side of the entrance to the most southwestern bay in the lake. The station is on the second rock from the entrance to the bay, 1 meter from the water on the point, 2 meters from the water on the bay side, and 0.3 meter above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1007 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917) .- On the east shore of Maraboeuf (Gneiss) Lake, on the high prominent point at the south end of the long northern reach of the lake. The station is on the highest part of a cliff, 15 meters back from the shore line on either side of the point, 36 meters back from the tip of the point, and 20 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1008 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921) .- On the east shore of Maraboeuf (Gneiss) Lake, 350 meters south of the narrows connecting this lake with Round Lake. The station is on a granite rock about 6 meters back from the shore line and 15 meters above the level of the lake. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1009 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).-On a small island in the southern part of Maraboeuf Lake. The station is on the east point of the island about 100 meters off the north shore and about 700 meters west of the entrance to the lake. It is on the bare rock near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1010 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).-On the shore of Maraboeuf (Gneiss) Lake, on the east side of the narrows connecting this lake with Round Lake. The station is on the top of a bare granite cliff, about 1 meter from the brink of the cliff and 18 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1011 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the shore at the entrance to Maraboeuf (Gneiss) Lake. The station is 100 meters west of the narrows and 60 meters south of the shore line of the waterway between Round and Maraboeuf Lakes, known as the Devils Elbow. The station is on a cleared place on the granite hill about 15 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1012 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the shore of the connecting stream ("Devils Elbow") between Maraboeuf (Gneiss) and Round Lakes, in the western bend of the elbow, opposite the southeast end of Devils Elbow Portage and 330 meters north of the narrows at the entrance to Maraboeuf Lake. The station is on a round nub of the granite ledge on a bare granite point, about 10 meters back from the extreme point and about 6 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1013 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).—Between Round and Maraboeuf Lakes, on the west bank of the narrows at the lower end of "Devils Elbow." The station is on the ledge near the water line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1014 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the shore of the connecting stream ("Devils Elbow") between Maraboeuf (Gneiss) and Round Lakes, on the prominent point facing east, in the first bend, 700 meters west of Round Lake. The station is on a conspicuous bare point of granite, 8 meters back from the tip of the point and 2 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1015 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of the stream known as the Devils Elbow between Round and Maraboeuf (Gneiss) Lakes. The station is at the southeast end of Devils Elbow Portage.

Station mark: A standard 8-inch manganese-bronze reference post set in a ledge. Station "Cark," marked by a bronze disk set in the rock, bears south 68° 51' east, 29.7 meters distant from the station.

**Reference Monument 1016** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the south shore of the connecting stream ("Devils Elbow") between Round and Maraboeuf (Gneiss) Lakes, on the point opposite the "Camp Ground" and 500 meters west of the outlet of Round Lake. The station is on the most southern of three granite nubs, about 50 meters east of the extreme tip of the point, 9 meters back from the shore, and 12 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1017 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the north bank of the connecting stream ("Devils Elbow") between Round and Maraboeuf (Gneiss) Lakes. The station is near the middle of the narrows in the northern part of the elbow. It is on the top of a white granite rock, 0.6 meter back from the shore and 0.3 meter above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1018 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—On the south side of the narrows at the outlet to Round Lake, about 120 meters west of Round Lake. The station is on a rock on the shore line and about 0.3 meter above high-water mark. Two 30-centimeter cedar stumps stand just east of the rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1019 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the north shore of the connecting stream ("Devils Elbow") between Round and Maraboeuf (Gneiss) Lakes, 600 meters northwest of the "Camp Grounds," 200 meters west of the angle where the shore line turns from north to west and opposite the north point of the south shore. The station is on a rounded granite rock about 0.5 meter in diameter, 9 meters back from the shore line, and 3.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1020 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—At the outlet of Round Lake, just inside and on the south shore of the narrows. The station is on a rock step at the bottom of a rounding steep granite slope about 15 meters in height and near high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1021** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the north shore of the connecting stream ("Devils Elbow") between Round and Maraboeuf (Gneiss) Lakes, on a point of the shore in the bend of the first northern reach of the stream after leaving Round Lake, about 350 meters north of the right-angle point at the "Camp Ground," which is 500 meters west of Round Lake. The station is on a point of rock 15 meters from the extreme point, 1.5 meters from the shore line, and 0.6 meter above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

96030-31-30

Reference Monument 1022 (Minnesota, Cook County; W. B. Fairfield, 1912; 1921).—Near the west shore of Round Lake, on the small island on the south side of the outlet of the lake. The station is near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1023 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the north bank of the stream flowing from Round Lake to Maraboeuf Lake. The station is on the point where the shore line makes a right-angle turn 500 meters west of Round Lake. It is on a rock, on top of the rounding ledge, about 4.5 meters back from the water's edge and 2.5 meters above high-water mark. There is a camp ground on the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1024 (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the east point of the large island in the south end of Round Lake. The station is near the shore and about 1 meter above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1025** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of the narrows at the outlet of Round Lake, about 125 meters west of Round Lake. The station is on a granite outcrop a little above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock and marking station "Color" bears south 41° 31' east, 2.4 meters from the station.

**Reference Monument 1026** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the west shore of Granite River, just above the rapids and narrows which are at the mouth of the river. The station is about 45 meters south of the east end of the portage around the rapids into Round Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in the rock, marking triangulation station "Dream," is south 38° east, distant 14.6 meters.

**Reference Monument 1027** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).—At the outlet of Round Lake, just inside and on the north shore of the narrows. The station is on a rock shelf on a 45° rock slope, 2 meters above the water and 2 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1028 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west side of Granite River, about 600 meters above Round Lake. The station is on the first rocky bluff point above the narrows, which are at the mouth of the stream. It is on top of the first rise about 10 meters above the river. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1029 (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1921).—On the west side of Round Lake. The station is on the highest point of a small rock islet lying about 100 meters east of the outlet of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1030** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west shore of Granite River, about 900 meters above Round Lake. The station is on a rock ledge on a low projecting point of the shore line and is about 5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1031** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the west end of the large island in the center of Round Lake. The station is on a very prominent round white granite ledge, 9 meters east of the shore line and 4 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1032** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west side of Granite River, about seven-eighths mile above Round Lake. The station is at the top of the slope of a high hill that is on a point that projects out into the river at the foot of the second rapids above the lake. The station is about 25 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1033** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the east shore of Round Lake, near the south end of the lake. The station is on the point about 250 meters north of the narrow entrance to the lake. It is about 3 meters back from the water's edge and about 2.4 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

Reference Monument 1034 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the south shore of Granite River, about 1,500 meters upstream from Round Lake. The station is on a sharp southern elbow

450

of the river between the second and third rapids above Round Lake. A small stream flows into the river about 50 meters upstream from the station. The station is on a rock outcrop near high-water mark. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1035 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the east shore of Granite River, about 100 meters above the rapids where the river empties into Round Lake. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1036 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).-On the south side of Granite River, about 1 mile above Round Lake. The station is on a granite knoll around which the river makes a sharp loop, with narrows and rapids on the southwest side of the knoll. There is a portage across the neck south of the station. Just above the station the river widens into a broad pond.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1037 (Ontario, Thunder Bay District; E. R. Martin 1917; 1921) .-- On the east side of Granite River, about 300 meters above the rapids and narrows which are at the mouth of the river. The station is on a rocky bluff near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in the rock, marking triangulation station "Cotter," bears north 38° 00' west, distant 8.9 meters.

Reference Monument 1038 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south side of Granite River, about 1¼ miles above Round Lake. The station is on the high hill on the point on the south side of the broad pond between Rock and Swamp Portages. There is a small rock island just off the point. Station mark: A standard 8-inch manganese-bronze reference post set in rock.

Reference Monument 1039 (Ontario, Thunder Bay district; W. B. Fairfield, 1911; 1917).-On the east side of Granite River, about five-eighths mile above Round Lake and about 200 meters below the second rapids. The station is on the brow of a flat-topped hill which pitches off very steeply from the station to the river and is about 25 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1040 (Minnesota, Cook County; E. R. Martin, 1917) .- On Granite River, about one-fourth mile downstream from the third rapids below Granite Lake. The station is on the larger of two small rocky islets lying off the entrance to the inlet that leads south to a portage.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

Reference Monument 1041 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921) .- On the east shore of Granite River, about three-fourths mile above Round Lake. The station is on a rock ledge about half way to the top of the hill at the head of the little bay just above the second rapids above Round Lake. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1042 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the shore at the head of the third and largest pond in Granite River below Granite Lake. The station is about 100 meters south of the narrows at the head of the pond, on a rock and about 1 meter above the level of the pond or lake. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1043 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the Canadian side of Granite River, near the head of the second rapids above Round Lake, on a high rocky hill around which the river makes a sharp southern loop. The station is on the summit, about 20 meters above the river.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1044 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).-On the south side of Granite River, about 1 mile below Granite Lake. The station is on the summit of a hill, 75 meters southwest of the pond below the second rapids below Granite Lake, and about 20 meters above the level of the pond. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1045 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the north shore of Granite River, about 1 mile above Round Lake. The station is at the head of the fourth rapids above the lake on the rocky shore well above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock and marking triangulation station "Chap" bears north 89° east, 9.3 meters from the station.

Reference Monument 1046 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).-On the west shore of Granite River, 20 meters downstream from the head of the second rapids below Granite Lake. The station is 25 meters at right angles to the shore line, on a slight hump, 10 meters above the level of the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1047 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917) .- On the north shore of the largest pond or lake in Granite River, on the point 300 meters east of the west end and outlet of the pond. The station is across the lake and about one-half mile distant from the north end of the Swamp Portage trail.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1048 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west bank of Granite River, three-fourths mile below Granite Lake, at the first rapids. The station is about half way down the rapids and about 0.6 meter back from the main channel of the stream. It is on a rock about 1 by 1.3 meters in cross section that projects up above extreme high-water mark. Extreme high water would surround the rock and extend 9 or 10 meters back from it.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1049** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of Granite River, at the foot of the third rapids below Granite Lake. The station is on a bare rock at the shore line and about 4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1050** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west bank of Granite River, about 800 meters north of the entrance to Granite Lake. The station is 35 meters back from the shore line of the river, 25 meters above the level of the water, and about 2 meters below the highest part of the steep slope of the hillside.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1051 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of Granite River, about 1¼ miles below Granite Lake and about 60 meters above the third rapids below the lake. The station is on a large white rock about 20 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1052 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west bank of Granite River, on the east side of the point lying between the river and the small bay that leads to Swamp Portage. The station is about 150 meters north of the extreme south end of the point, on a granite head about 10 meters above the water and 9 meters west of the river shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1053** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of Granite River, in the big bend of the stream about 1½ miles north of Granite Lake. The station is about 75 meters downstream from the second rapids below Granite Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in rock. A bronze disk marking triangulation station "Cutty" is about 18 meters west of the monument.

Reference Monument 1054 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the west bank of Granite River, 360 meters north-northwest of the entrance to Granite Lake, and just south of the cove leading to Swamp Portage. The station is on the summit of a little round granite knoll, 5 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1055 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the north bank of Granite River, about 1 mile north of Granite Lake. The station is on the north shore of the pond between the first and second rapids below Granite Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a rock at the high-water shore line, marking station "Crumb," bears south  $4^{\circ}$  30' east, 6.3 meters from the monument.

**Reference Monument 1056** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the ridge west of the outlet of Granite Lake, about 300 meters distant therefrom and about 250 meters in a northeasterly direction from the outlet of Pine Lake. The station is about 50 meters above the level of the lakes.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1057** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the east bank of Granite River, on the high granite bluff at the first rapids below Granite Lake. The station is 80 meters due east of the rapids, 60 meters southeast of the shore of the pond below the rapids, and about 30 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1058 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the north side of the narrows, at the extreme north end of Pine Lake, and about 120 meters above the rapids that are downstream from Pine Lake. The station is on the slope of the steep hillside that rises from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

452

Reference Monument 1059 (Ontario, Thunder Bay District, W. B. Fairfield, 1911; 1921).—On the east side of Granite River, about 850 meters north of the entrance to Granite Lake, and about 220 meters east of the river. The station is on the summit of an isolated hill, about 40 meters above the level of the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1060 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the north shor of Pine Lake, about midway between the east and west shores, on the tip of a low V-shaped point projecting about 80 meters out into the lake. The station is about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 1061 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the east side of Granite River, about 400 meters north of the entrance to Granite Lake. The station is on the first granite hill north of the low place between the lake and the river. It is about 130 meters east of the river and about 30 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1062 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the west shore of Pine Lake, on the rocky point directly opposite the mouth of the boundary stream, and about 540 meters northwest of the west end of the Pine Portage trail. The station is on a large rock close to the water's edge. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1063** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the point on the south side of the outlet of Granite Lake. The station is about 60 meters back from the water's edge and about 18 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1064** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the east side of Pine Lake, on the northwest point of Pine Island and south of the foot of the rapids at the mouth of Pine River. The station is on a white granite rock, about 50 meters from the extreme northwest tip of the island and about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1065** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—Between Pine and Granite Lakes. The station is on the bluff about 75 meters back from the southeast shore of the small bay or pond that lies between the two lakes.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

Reference Monument 1066 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south side of the boundary channel of Pine River, about 475 meters above Pine Lake and at the head of the second rapids above the lake. The station is on a rocky cliff about 15 meters back from the shore line and about 4 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock; replaced in 1921.

Reference Monument 1067 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the south side of the connecting stream between Pine and Granite Lakes. The station is about 60 meters southeast of the point where Pine Lake discharges into the stream. It is on high ground, about 12 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

**Reference Monument 1068** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south side of the boundary channel of Pine River, about 225 meters above the second rapids above Pine Lake. The station is on a small knoll at the bend of the stream, about 30 meters back from the shore line and about 8 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1069** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the east shore of Pine Lake, about midway between the ends of the narrow part of the lake and southeast of the small rock island (No. 10) that lies in the narrows. The station is on the highest part of a high cliff, about 20 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock.

**Reference Monument 1070** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the west side of Pine River, about 800 meters upstream along the boundary from Pine Lake. The station is on the slope about 30 meters back from the shore line of a little bay and about 4 meters above the water. There is a little marshy flat just to the east of it.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 1071 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the east shore of Pine Lake, at the north end of the wide part of the lake, about 100 meters east of the small wooded

island (No. 9) that lies at the entrance to the narrow part of the lake. The station is on the smooth ledge on top of a cliff, about 3 meters from the edge of the cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1072 (Minnesota, Cook County; E. R. Martin, 1917) .-- On the west side of Pine River, about 230 meters distant from and below the first sharp bend of the stream below the third rapids above Pine Lake. The station is on high ground in the thick jack pine grove, about 30 meters back from the shore line; and about 4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1073 (Ontario, Thunder Bay District, 1911; 1917).-On the east shore of Pine Lake, about midway between the ends of the lake and about 130 meters north of the boundary stream. The station is near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in rock. A drill hole within a triangle cut in a fixed rock about 1 meter from the water's edge, and marking station "City," bears north 15° 39' west, 18.3 meters distant from the monument.

Reference Monument 1074 (Minnesota, Cook County; E. R. Martin, 1917; 1921).-On the west side of Pine River, about 140 meters below the third rapids in the boundary stream above Pine Lake. The station is on a small rocky hill about 40 meters north of the shore of a small bay or pond of the stream. It is about 7 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1075 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).-On the east shore of Pine Lake, on the rocky point or ledge at the north side of the mouth of the boundary stream. The station is on top of a ledge, 12 meters from the water's edge and 3 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1076 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921) .-- On Pine Island, about 180 meters northeast of the east end of Pine Portage. The station is on the summit of a sharp knoll near the river's edge. The knoll is the first one along the shore from the end of the portage.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1077 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).-On the north side of the boundary channel of Pine River, about 500 meters above Pine Lake and at the head of the second rapids above the lake. The station is about 10 meters back from the shore line and about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1078 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).-On the west side of a small pond in Pine River, on the prominent point of the shore line 160 meters south of the east end of the Pine Portage trail. The station is on the summit of the point, about 7 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 1079 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).-On the north side of the boundary channel of Pine River, about 225 meters above the second rapids above Pine Lake. The station is on a rocky knoll in the bend of the stream, about 45 meters north of the shore line and about 7 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1080 (Minnesota, Cook County; E. R. Martin, 1917) .- On the south shore of Pine River, directly west of Blueberry Portage and just east of the head of the south channel around Pine Island. The station is on a rocky bluff about 7.5 meters above the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1081 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921) .- On the north side of the boundary channel of Pine River, about 1,000 meters above Pine Lake. The station is on a large bare rock about 25 meters from the shore and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1082 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921) .- On the west bank of Pine River, opposite and 75 meters west of the foot of Blueberry Falls and about 100 meters west-southwest of the west end of the Blueberry Portage trail. The station is on a rock shelf near the top of a high rock face, 15 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock.

Reference Monument 1083 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).-On the Canadian side of Pine River, about three-fourths mile above Pine Lake. The station is on the low rocky cliff on the east side of the large pond in the big bend of the river. It is about 480 meters below the third rapids above Pine Lake, about 20 meters from the water's edge, and about 5 meters above the water level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1084** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On Pine River. The river here is divided into three channels, forming two large islands. Blueberry Portage crosses the more northern of these islands. The station is near the most northern point of the southern island and on the south shore of the middle channel of the river. It is on a rocky bluff about 9 meters back from the water's edge and about 4.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1085 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the south side of the boundary channel of Pine River at a point where the stream turns to the north about 250 meters below the third rapids above Pine Lake. The station is on the bluff about 50 meters back from the shore line and about 15 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1086** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the eastern shore of the more southern of two large islands formed by the division of Pine River into three channels. The station is on a bare rocky ledge at the fork of the middle and southern channels of the river about 120 meters southwest of the head of Blueberry Portage and on the north side of a small point of land projecting into the rapids. It is about 1.5 meters above and 1 meter back from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1087 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the east side of Pine River, about 150 meters below the third rapids in the boundary stream above Pine Lake. The station is on a rocky knoll about 20 meters south of the shore line and about 6 meters above the water level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1088 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On Pine River about 100 meters southeast of the east end of the Blueberry Portage trail. The station is on the west side of a knoll about 50 meters east of the head of the rapids and about 8 meters above the water level. Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 1089 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the east side of Pine River just above the third rapids of the boundary channel above Pine Lake. The station is on a bushy hill about 120 meters from the rapids, about 60 meters from the shore, and about 8 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in rock.

Reference Monument 1090 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the west shore of Pine River, at the first turn of the boundary channel above the east end of Blueberry Portage. The station is on a rocky cliff about 12 meters from the shore and about 7.5 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1091 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the north side of Pine River, 65 meters north by east of the west end of the Blueberry Portage trail. The station is on the highest point of the south end of a granite hill. It is 15 meters above the end of the trail. Station mark: A standard 8-inch manganese-bronze reference post set in the solid granite.

Reference Monument 1092 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south side of Pine River, about 1,200 meters downstream from Little Rock Portage and about 200 meters due south of the east end of the Blueberry Portage trail. The station is on the highest point of a long granite ridge extending north and south, with water on both sides of it. It is about 7 meters above the level of the river. Station mark: A standard 8-inch manganese-bronze reference post set in the granite ledge.

Reference Monument 1093 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the bank of Pine River, at the head of the rapids, about 75 meters south of the east end of Blueberry Portage. The station

is on a rock shelf about 2.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1094 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the southern bank of Pine River, 850 meters below Little Rock Portage, 230 meters west of a large rock head (almost an island), and 100 meters upstream from a small rock island. The station is on a ledge on a projecting point of the shore; 40 meters back from the tip of the point; 30 meters from the downstream shore of the point; 15 meters from and 1.5 meters lower than the highest point of the ledge; and 4.5 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1095 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the bank of Pine River, at the east end of Blueberry Portage. The station is on the granite ridge 15 meters northeast of the cut in the rock through which the portage trail passes. It is 5 meters from and 2.5 meters above the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the granite ridge.

Reference Monument 1096 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west bank of Pine River, about 410 meters below Little Rock Portage, on the first prominent high granite ledge. The station is about 3 meters below the highest part of the ledge, about 18 meters above the water, and about 48 meters from the shore line. It is on a shelf 2.5 meters wide, at the top of a 40° slope.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1097 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the north bank of Pine River, about 900 meters below Little Rock Portage. The station is on a cobblestone-topped hill, about 23 meters above the water, and about 9 meters back from the top of the west slope of the hill. Station mark: A standard 8-inch manganese-bronze reference post.

Reference Monument 1098 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921) .- On the west bank of Pine River, about 400 meters below Magnetic Lake, and just above the falls at Little Rock Portage. The station is about 7.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1099 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the east bank of Pine River, about 460 meters below Little Rock Portage and just northeast of a narrows in the stream. The station is on top of a prominent granite ledge about 2 meters wide at the station and running off in a ridge to the southeast. There is a shallow pit in the ledge just west of the station and another ledge knoll about 8 meters to the north of the station. The station is about 9 meters above the water, and 9 meters from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1100 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917) .- On the west bank of Pine River, about 250 meters below Magnetic Lake, and about 160 meters above the falls. The station is at the water's edge, on a ledge about 1.5 by 2.7 meters in top dimensions, and is about 0.3 meter above highwater mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the stone.

Reference Monument 1101 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the east side of Pine River, about 400 meters below Magnetic Lake and just below the falls at Little Rock Portage. The station is on the rock ledge, about 18 meters back from the shore line and about 9 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1102 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921) .- At the north end and outlet of Magnetic Lake. The station is on the highest point of a black granite ledge south of the outlet and is 9 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1103 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917) .- On the east bank of Pine River, about 250 meters below Magnetic Lake and about 160 meters above the falls. The station is on a pointed piece of granite outcrop, 4.5 meters from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1104 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921) .- On the west shore of the north arm of Magnetic Lake, about 1,800 meters north of the entrance from Gunflint Lake. The station is about 50 meters southwest of a small granite island. It is near the shore line, on a rock shelf, at the foot of a granite hill.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking triangulation station "Dead," is set in the rock, north 68° 31' east, 2.7 meters from the station.

Reference Monument 1105 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921) .- On the eastern bank of Pine River, just above the first rapids leaving Magnetic Lake. The station is on the most northern end of an outcrop of granite 2.5 meters by 11 meters in dimensions and varying from 1 to 2 meters above the high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1106 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917) .- On a granite island in Magnetic Lake, 1,440 meters north-northwest of the entrance from Gunflint Lake. The station is on the extreme northeast point of the island, about 2.5 meters from the shore line of the point and about midway between the sides of the point. It is on the solid rock 2 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1107** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of Magnetic Lake, about 200 meters east of the outlet into Pine River. The station is on the highest point of a prominent granite ledge 9 meters high and 14 meters across. It is 4.5 meters from the west side of the outcrop, and 12 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1108 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the southern shore of Magnetic Lake, on the point 375 meters northwest of the connecting stream between Gunflint and Magnetic Lakes.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in. a large rock close to the water's edge and marking station "Deal," bears south 54° 44' east, 4.9 meters from the station.

Reference Monument 1109 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the east shore of the north arm of Magnetic Lake, on a point about 300 meters south of the Pine River outlet. The station is on a granite ledge, 14 meters northeast of a broken ledge point, 3 meters east of the shore line, and 2 meters above high-water level.

Station mark: A standard 8-inch manganese bronze reference post set in the ledge.

**Reference Monument 1110** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—At the west end of Gunflint Lake, on the point at the west side of the outlet into Magnetic Lake. The station is about 30 meters south of the old railroad bridge, on a rock near high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1111** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the east shore of the north arm of Magnetic Lake, about 1,380 meters north of the entrance from Gunflint Lake. The station is on the prominent point 200 meters east of a conspicuous granite island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large bowlder near the shore line, marking triangulation station "Candy," bears north 88° 43' west, 3.8 meters distant from the station.

Reference Monument 1112 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Gunflint Lake, about 1 mile south of and opposite the outlet into Magnetic Lake. The station is near the middle of a concave shore line about 300 meters east of a small bay that lies behind a long point making out from the west parallel to the main shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

**Reference Monument 1113** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the point between Gunflint Lake and Magnetic Lake, about 130 meters northeast of the connecting stream between the two lakes. The station is on top of a cliff overlooking the shore and is back about 3 meters from the edge of the cliff on a smooth flat ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1114** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Gunflint Lake, about 2,200 meters southeast of the outlet into Magnetic Lake. The station is on the most western of three consecutive points of the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large fixed rock about 4 meters back from the water's edge, marking station "Dulce," bears north 59° 36' west, 5.5 meters from the monument.

**Reference Monument 1115** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—At the west end of Gunflint Lake. The station is on the point at the east side of the outlet into Magnetic Lake. It is on a large rock about 30 meters south of the old railroad bridge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1116** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Gunflint Lake, about midway between the ends of the lake, opposite and nearly south of the small wooded island (No. 8) that lies near the northern shore of the lake. The station is on a prominent point of the shore line, on a large rock, 4.5 meters from the water's edge and 0.7 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1117** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of Gunflint Lake, about 900 meters east of the outlet into Magnetic Lake. The station is on the south-eastern point of a projecting headland or peninsula.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a large rock near the shore line, marking station "Caddie," bears south  $29^{\circ}$  46' east, 14.2 meters distant from the station.

## APPENDIX V

**Reference Monument 1118** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Gunflint Lake, about midway between the ends of the lake, on a rounded, timbered point directly opposite the most western of the three conspicuous white granite cliffs of the north shore. The station is on the extreme end of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large bowlder near the shore line, marking triangulation station "Dough," bears north 13° 46′ east, 4.9 meters from the station.

**Reference Monument 1119** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Gunflint Lake, about 2<sup>%</sup>/<sub>4</sub> miles east of the west end of the lake. The station is on a prominent point that has a small bay lying to the north and back of it. The point ends in a rocky knoll at its eastern extremity. The station is on the gravel beach at the southwest side of the rocky knoll. It is on an outcropping slate ledge about 3 meters from the shore and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1120** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the southeast corner of Gunflint Lake, about 2,200 meters southwest of the inlet from Little Gunflint Lake. The station is on the north side of a small island.

Station mark: A standard 8-inch manganese-bronze reference post set in solid rock.

**Reference Monument 1121** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north side of Gunflint Lake, about midway between the ends of the lake. The station is on the middle one of the three rock cliffs on the shore. It is on the first bench about 2 meters back from the edge of the cliff and about 20 meters above the grade of the abandoned railway.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid ledge.

**Reference Monument 1122** (Minnesota, Cook County; E. R. Martin, 1917).—On the east end of Gunflint Lake, about 450 meters southwest of the mouth of the stream flowing from Little Gunflint Lake. The station is on the west end of the largest island lying off the point in this part of the lake. It is on a large flat rock about 1 meter above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1123** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Gunflint Lake, on the first prominent point west of and about 1 mile distant from the mouth of the stream flow ing from Little Gunflint Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1124** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—At the east end of Gunflint Lake, on the point just south of the stream flowing from Little Gunflint Lake. The station is just in front and north of the United States customhouse, on a granite rock about 0.5 meter across and nearly flush with the ground. It is about 3.5 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1125 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north side of Gunflint Lake near the east end of the lake. The station is on the summit of a high, bare, rocky hill, about 800 meters northwest of the stream flowing from Little Gunflint Lake into Gunflint Lake and about 225 meters north of the lake shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bronze disk set in the ledge bears south 58° east, 1.66 meters from the station, and marks triangulation station "Cutts."

**Reference Monument 1126** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the south shore of Little Gunflint Lake, about 230 meters east of Gunflint Lake. The station is on a cleared point 11 meters back of and 2 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1127** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the north side of Little Gunflint Lake, about 70 meters from the lake shore, and about 120 meters from the mouth of the stream flowing from the lake into Gunflint Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in a ledge of rock 6 meters northwest and a little above the level of the old railroad grade, marking triangulation station "Chat," bears north 29° 17′ west, 11.5 meters from the station.

Reference Monument 1128 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south shore of Little Gunflint Lake, about 420 meters east of the outlet into Gunflint Lake and about 50 meters back from the marshy shore.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 1129 (Ontario, Thunder Bay District; 1917; 1921).—On the north side, at the west end of Little Gunflint Lake, about 180 meters northeast of the outlet into Gunflint Lake. The station is on a large bowlder about 60 meters north of the shore line and on the north side of the old railroad right of way. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1130 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south shore of Little Gunflint Lake, 600 meters east of the outlet into Gunflint Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

Reference Monument 1131 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north side of Little Gunflint Lake, about 390 meters from the outlet into Gunflint Lake. The station is on a low flat point about 50 meters back from the shore line. It is on a rock outcrop about 1 meter square. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1132 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Little Gunflint Lake, about midway between the ends of the lake, and on the most prominent point on the south shore.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock.

**Reference Monument 1133** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the north shore of Little Gunflint Lake, about 600 meters east of the outlet into Gunflint Lake. The station is at the eastern end of the narrow part of the lake and near the high-water mark on an outcropping ledge about 3.5 by 4 meters in area.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1134** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the southeast shore of Little Gunflint Lake, 340 meters south by west of the portage from Little North Lake. The station is just below high-water mark, about 1 meter from the shore line, on a bowlder 1 by 1.5 meters in cross section.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking triangulation station "Dooley," bears north 14° east, 0.5 meter distant.

Reference Monument 1135 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of Little Gunflint Lake, about midway between the ends of the lake. The station is on the most prominent point of the north shore, 20 meters north from the extreme end of the point, and about midway between the east and west sides of the point. It is about 1.5 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1136 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the south shore of Little North Lake, 270 meters east of the boundary stream flowing into Little Gunflint Lake. Station mark: A standard 8-inch manganese-bronze reference post set in a large bowlder.

**Reference Monument 1137** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921).—At the east end of Little Gunflint Lake. The station is about 7 meters north of the mouth of the stream flowing from Little North Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in rock. A bronze disk, set in a bowlder marking station "Canute," is 3.26 meters east of the monument.

Reference Monument 1138 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Little North Lake, about 430 meters east of the stream flowing into Little Gunflint Lake. The station is on a granite bowlder, 2 meters from the water's edge and 0.3 meter below high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1139** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—At the extreme western end of Little North Lake. The station is on the north side of the head of the boundary stream flowing from Little North Lake into Little Gunflint Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking triangulation station "Cover," set in one of the largest of a mass of irregularly shaped rocks on the shore line, bears south  $18^{\circ} 17'$  east, 6.1 meters from the station.

**Reference Monument 1140** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Little North Lake on the point of the shore line at the west end of the Little North Lake narrows. The station is on a rock outcrop on the extreme tip of the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a flat-topped rock a little below high-water mark, marking triangulation station "Doke," bears north  $40^{\circ}$  east, 0.6 meter from the station.

**Reference Monument 1141** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of Little North Lake, about 460 meters northeast of the boundary stream flowing into Little Gunflint Lake

The station is on a prominent point at the east base of an isolated knoll. It is on the slope of a bare granite ledge, about 2 meters above high-water mark and about 3 meters from the water line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1142 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Little North Lake, on the point at the west end of the narrows from North Lake. The station is 3.5 meters from the shore line and 2.5 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1143** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of Little North Lake, on the point on the north side of the narrows of Little North Lake, directly opposite the mouth of the narrows from North Lake. The station is on a prominent granite ledge 2.5 meters above the lake level and 6 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1144** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of the narrows between North Lake and Little North Lake and about 100 meters east of the west end of the narrows. The station is on a black slate rock near the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in the rock, marking triangulation station "Dod," bears north 62° west, 1.2 meters distant from the station.

**Reference Monument 1145** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of Little North Lake, directly opposite the mouth of the narrows from North Lake. The station is 8 meters above the lake level on a bare granite ledge that rises from the water's edge to a height of 10 meters. The old abandoned railroad grade is 33 meters north of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1146** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of the narrows between North Lake and Little North Lake, about 170 meters west of the west end of the small island in the narrows.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a rock a little below high-water mark, marking triangulation station "Doc," bears north 31° east, 1.3 meters distant from the station.

**Reference Monument 1147** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the shore of Little North Lake, on the point on the west end of the narrows from North Lake. The station is about 15 meters northwest of the extreme point and near high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a granite bowlder, marking triangulation station "Cita," bears south 70° west, 0.75 meter from the station.

Reference Monument 1148 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south side of the narrows between North Lake and Little North Lake, 450 meters west of the outlet of North Lake. The station is southeast of island No. 6. It is on the shore line on a large bowlder 0.3 meter below high-water mark. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1149 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north side of the narrows between North and Little North Lakes. The station is near the shore line, about 200 meters east of Little North Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in rock.

Reference Monument 1150 (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of the narrows between North Lake and Little North Lake, about 300 meters west of the North Lake outlet.

Station mark: A standard 8-inch manganese-bronze reference post. A bronze disk set in a solid ledge a little below high-water mark, marking triangulation station "Dog," bears north 10° west, 2.8 meters distant from the station.

**Reference Monument 1151** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of the narrows between North Lake and Little North Lake, about 460 meters west of the outlet of North Lake. The station is on a rock about 4 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1152** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the north shore of North Lake, on the most northern point of the shore on the south side of the narrows or entrance to Little North Lake. The station is on a solid ledge, at high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1153 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north side of the narrows between North Lake and Little North Lake, 300 meters west of the North Lake outlet. The station is on a large granite rock close to the water's edge and 0.3 meter below the high-water mark. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1154** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the north shore of North Lake, on the eastern tip of the point on the south side of the entrance to Little North Lake. The station is on a solid ledge at high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1155** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of North Lake, on the point on the north side of the entrance to the narrows leaving North Lake and connecting with Little North Lake. The station is on the solid ledge at high-water mark, about 4.5 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1156 (Minnesota, Cook County; E. R. Martin, 1917).—On the west end of North Lake, on the middle and largest one of three small islands that are abreast of and three-eighths mile distant from Height-of-Land Portage. The station is on the southeast side of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1157 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of North Lake, on the big rounded point 900 meters east of the entrance to Little North Lake. The station is 1 meter south of and 0.3 meter below high-water mark, on a cobblestone beach.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1158** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of South Lake,  $1\frac{1}{2}$  miles from the west end of the lake and nearly southeast of Height-of-Land Portage.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in a rock near the shore line, marking station "Dick," bears north 18° east, 1.4 meters from the station.

**Reference Monument 1159** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the south shore of North Lake, about 1,000 meters east of Height-of-Land Portage. The station is on a large rock, about 0.3 meter above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1160** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of South Lake, on a rounded point 1 mile from the east end of the lake. The station is on the part of the point that projects farthest into the lake, on a large smooth rock about 1 meter from the water's edge and 0.3 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1161 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of South Lake, about 500 meters east of Height-of-Land Portage. The station is on a prominent point of the shore line on a rock.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in a rock 4.5 meters from the water's edge, marking triangulation station "Crow," bears south 30° east, 12 meters distant from the station.

**Reference Monument 1162** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the southern shore of South Lake on a rounding point one-half mile west of the portage to Rat Lake. The station is on a large rock, 1 meter from the water's edge and 0.5 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1163** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of South Lake, 1 mile west of the east end of the lake and on the second prominent rocky point from the east end. The station is on a projecting ledge, 2.5 meters back from the water's edge and 0.7 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1164 (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the east end of South Lake, on the tip of the long rocky point 200 meters southwest of the portage to Rat Lake. There is a small rocky island about 50 meters north of the point. The station is on a large rock at the water's edge. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1165 (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north shore of South Lake, on the first prominent wooded point west of the east end of the lake, one-half mile west

of South Lake Portage. The station is on a rock, 4.5 meters from the water's edge and 3.5 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1166** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—At the east end of South Lake, about 8 meters west of the portage trail. The station is on a rock, about 23 meters northwest of the mouth of the southern stream from Rat Lake and about 2.5 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk stamped "1552," marking South Lake bench mark, is 0.3 meter north of the station.

Reference Monument 1167 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—At the east end of South Lake, about 200 meters southwest of the outlet of South Lake. The station is on the smaller island lying in this part of the lake, on a solid rock about 0.6 meter in diameter.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1168** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west end of Rat Lake, at the east end of South Lake Portage and just south of the main stream connecting Rat and South Lakes. The station is about 3 meters west of the shore on a rock on the northern side of the center of the portage trail. It is about 0.3 meter above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1169 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—At the east end of South Lake, about 15 meters from the lake shore and about 30 meters north of the head of the boundary stream flowing into Rat Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in a granite bowlder.

Reference Monument 1170 (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rat Lake, about 230 meters south by west from the entrance to Rose Lake. The station is on a rock outcrop on the side hill, about 18 meters back from the shore line and about 9 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1171 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—At the west end of Rat Lake. The station is on a rock outcrop, about 15 meters from the shore on the north side of the road from Rat Lake to South Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1172** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—At the west end of Rose Lake, between the portage and the short rapids from Rat Lake. The station is on a solid rock 1 meter in diameter and about 2 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking triangulation station "Duke," near the shore line, bears north 14° 27′ east, 5.21 meters distant.

Reference Monument 1173 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—Between Rat and Rose Lakes. The station is on the point on the north side of the narrows, on a rock outcrop about 1.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk near the shore line, marking triangulation station "Duke," bears south  $73^{\circ}$  27' east, 16.52 meters distant.

**Reference Monument 1174** (Minnesota, Cook County; E. R. Martin, 1917).—At the west end of Rose Lake, on the point about 150 meters east of Rat Portage. The station is on a solid rock about 1.2 meters in diameter, about 15 meters back from the shore and about 4 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. Station "Dark," marked by a drill hole in rock, bears north 33° 18' east, 15.5 meters distant from the station.

Reference Monument 1175 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the west shore of Rose Lake, about 150 meters north of the boundary channel into Rat Lake. The station is on a ledge on the little rock point, about 2.4 meters back from the rock shore and about 1.5 meters above the water level. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1176** (Minnesota, Cook County; E. R. Martin, 1917).—Near the west end of Rose Lake, on the rounded shore line about 300 meters east of the Rat Portage. The station is on a rock outcrop about 2 meters above and 10 meters back from the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. Station "Drop," marked by a drill hole in the rock, bears north 25° 35' east, 10.2 meters distant from the station.

**Reference Monument 1177** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore at the head of Rose Lake, about 400 meters northeast from the outlet of Rat Lake. The station is about 15 meters back from the grassy shore line, on a bowlder about 1 meter in diameter.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

462

**Reference Monument 1178** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, about 700 meters east of Rat Portage. The station is on a rock outcrop about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in the rock near the shore line, marking triangulation station "Dan," bears north  $13^{\circ}$  56' west, 6.1 meters distant from the monument.

**Reference Monument 1179** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore at the head of Rose Lake, on the point facing Rat Portage, about 350 meters across the bay from the portage. The station is on a rock ledge about 3.5 meters back from and about 2 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. Station "Colt," marked by a drill hole, bears south  $67^{\circ}$  06' west, 3.4 meters distant.

**Reference Monument 1180** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, about seven-eighths mile east of the west end of the lake. The station is on a little point near the middle of the part of the shore that runs northeasterly and southwesterly. It is on a small bowlder about 8 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder. A drill hole in the rock at the shore line, marking station "Dump," bears north  $60^{\circ}$  west, 8.4 meters distant.

**Reference Monument 1181** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Rose Lake, on the big point that is about 500 meters east of Rat Portage. The station is on the rocks close to the shore line. A small rock island lies just off the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in the rock, marking triangulation station "Carl," bears south  $30^{\circ}$  14' west, 43.6 meters distant.

**Reference Monument 1182** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, on the first prominent point about five-eighths mile west of the narrows in that part of the lake known as Mud Lake. The station is on a prominent cone-shaped white bowlder about 27 meters inland from the shore line and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder. A drill hole in a fixed rock near the shore line, marking station "Duck," bears north 35° 49′ west, 26.6 meters distant from the monument.

**Reference Monument 1183** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of the "Mud Lake" portion of Rose Lake, about three-fourths mile east of the west end of the lake. The station is on a rounded point of the shore line, about 9 meters back from the water and about 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in the rock, marking station "Cap," bears south 68° 34' east, 8.8 meters distant.

**Reference Monument 1184** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, on the bay just west of the narrows in the narrow part of the lake known as Mud Lake. The station is on the shore just after it turns from the south to the west. It is on a granite bowlder about 0.6 meter in diameter, about 9 meters back from the shore and 2 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder. A drill hole in a fixed rock on the shore line, marking station "Deer," bears north 27° west, 9.1 meters distant from the monument.

Reference Monument 1185 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of the part of Rose Lake known as Mud Lake, and in the bay three-fourths mile west of the narrows. The station is on a white bowlder about 1 meter in diameter, about 11 meters inland from the shore line, and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in the rock near the shore line, marking station "Crib," bears south  $20^{\circ} 25'$  east, 11.4 meters distant.

**Reference Monument 1186** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Rose Lake, on the prominent point at the narrows of the "Mud Lake" portion of the lake, just where the lake shore turns to the south. The station is on a large fixed rock, 1.2 meters from the water's edge, and 1.2 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1187 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Rose Lake, about three-eighths mile west of the narrows of that portion of the lake known as Mud Lake. It is on the first point of the shore line west of the bend at the narrows, on a large flat rock about 2 meters in diameter, about 9 meters inland from the shore, and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole in a fixed rock on the shore line, marking station "Cat," bears south 23° 06' east, 9.1 meters distant.

Reference Monument 1188 (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake in the narrow part of the lake known as Mud Lake, about 300 meters east of the big bend in the narrows. The station is on a large bowlder near the shore line and about 1.5 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1189 (Ontario, Thunder Bay District; E. R. Martin, 1917) .- On the north shore

of that part of Rose Lake known as Mud Lake, in the bend where the shore line turns abruptly to the southwest. The station is on a large flat rock about 9 meters back from the shore line and about 1.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1190** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, about 250 meters west of the first prominent point inside the narrow part of the lake known as Mud Lake. The station is on a small bowlder about 9 meters back from the shore and about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder. A bronze disk set in a solid flat rock at the shore line, marking station "Brand," bears north  $79^{\circ}$  51' east, 20.7 meters distant from the monument.

Reference Monument 1191 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Mud Lake (the local name for the narrow part of Rose Lake), at the narrowest part of the lake. The station is about 100 meters north of the nearest building of Bishop's Lumber Camp, on a cleared knoll about 75 meters back from the lake shore.

Station mark: A standard 8-inch manganese-bronze reference post set in a smooth ledge of rock with a large round bowlder on the north side of it.

**Reference Monument 1192** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, at the west end of the wide part of the lake. The station is on the rocky point just at the entrance to the narrow part of the lake. It is on a large rock about 5 meters inland from the water's edge and about 2.4 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a large flat rock at the shore line, marking station "Bird," bears north 31° 18' east, 4.76 meters distant from the station.

**Reference Monument 1193** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Mud Lake (the local name for the narrow part of Rose Lake), at the east end of the narrowest place in the lake. The station is about 200 meters east of the Bishop Lumber Co.'s Camp, on a large fixed rock, 3 meters from the water's edge, and 1.5 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1194 (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake on the rounded point between two small bays, about one-half mile east of the west end of the wide part of the lake. The station is on a rock outcrop about 10 meters inland from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a rock near the shore line, marking station "Book," bears north 32° 36' west, 9.9 meters distant from the monument.

**Reference Monument 1195** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Rose Lake, on the first prominent point inside the narrow part of the lake. The station is on a rock outcrop about 1.2 meters in diameter, about 10 meters back from the shore line and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a rock near the water's edge, marking station "Alger," bears south 3° 34' west, 10.4 meters distant from the monument.

**Reference Monument 1196** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Rose Lake, about 1,100 meters from the east end of the lake. The station is on the most western of several small points of the rounded shore line. It is on a rock about 4 meters inland from the shore line and about 2.4 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a large bowlder on the shore line, marking station "Belt," bears north 17° east, 7.5 meters distant from the monument.

**Reference Monument 1197** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Rose Lake, about 200 meters west of the prominent point at the entrance to the narrow western part of the lake. The station is on a large rock about 2 meters back from the shore and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a rock on the shore line, marking station "Arthur," bears south 9° 12' east, 1.64 meters distant from the monument.

Reference Monument 1198 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south shore of Rose Lake, about 650 meters west of the mouth of the boundary stream at the east end of the lake. The station is on the first prominent point of the shore west of the mouth of the stream. It is on a large rock about 4 meters inland from the shore line and about 1.5 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a large rock near the shore line, marking station "Bag," bears north 8° east, 3.5 meters distant from the monument.

Reference Monument 1199 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Rose Lake, on the prominent point where the lake suddenly narrows down into what is known as Mud Lake. The station is on a large flat rock about 10 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a small split rock outcrop 12 meters from the shore line, marking station "Altoona," bears south  $31^{\circ}$  west, 4.35 meters distant from the monument.

**Reference Monument 1200** (Minnesota, Cook County; W. B. Fairfield, 1910; 1921).—On the east shore of Rose Lake, about 50 meters west from the mouth of the boundary stream flowing from Watap Lake. The station is on a large rock 2.5 meters from the water's edge and about 0.5 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock and marking triangulation station "Bowie," bears south 37° east, 0.5 meter from the monument.

**Reference Monument 1201** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Rose Lake on the prominent point seven-eighths mile west of the stream flowing from Rose Lake to Arrow Lake. The station is on a ledge near the shore line and about 2 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A drill hole within a triangle cut in a fixed rock near the water, marking station "Antrim," bears south 44° 22' east, 3.5 meters distant from the monument.

Reference Monument 1202 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south side of the boundary stream flowing from Watap Lake to Rose Lake and about 1 mile east, along the stream, from the east end of Rose Lake. The station is on a rock outcrop about 1 meter in diameter, about 20 meters south of the boundary stream and about 4 meters west of the brook emptying into the boundary stream from the south. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1203** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Rose Lake, on the projecting point five-eighths mile northwest of the mouth of the boundary stream at the east end of the lake. There is a small rocky island in front of the point. The station is on a large rock, about 4.5 meters from the water's edge and 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1204 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—At the head of the boundary stream flowing from the west end of Watap Lake. The station is on a bowlder about 30 meters south of the stream and about 75 meters from the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1205** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—At the east end of Rose Lake. The station is on the sharp and prominent point between two bays, about 600 meters northwest of the west end of the Long Portage trail. It is on a ledge about 6 meters from the shore line and about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1206 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south side of Watap (Rove) Lake, about 400 meters from the west end of the lake. The station is on top of a cliff on the side hill about 250 meters from the lake shore. It is on a solid ledge about 3 meters back from the edge of the cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge,

**Reference Monument 1207** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—At the east end of Rose Lake, about 20 meters north of the mouth of the boundary stream flowing from Watap Lake, about 6 meters from the shore line of the lake, and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base about 1 foot square, with its top flush with the ground.

**Reference Monument 1208** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south shore of Watap Lake, on the south side of the first narrows east of the west end of the lake. The station is on a granite bowlder about 1.5 meters in diameter, lying near the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

96030-31-31

## APPENDIX V

Reference Monument 1209 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north side of the boundary stream flowing from Watap Lake to Rose Lake and about 1 mile east along the stream from the east end of Rose Lake. The station is opposite the mouth of the only brook emptying into the boundary stream from the south. It is about 3 meters from the bank of the stream on a bowlder about 1 meter in diameter.

Station mark: A standard S-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1210 (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Watap Lake about midway between the first and the second narrows east from the west end of the lake. The station is on a bowlder about 3.6 meters from the shore line and 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1211 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921).—At the west end of Watap (Rove) Lake, on the small wooded knoll about 50 meters south of the portage trail and about the same distance from the mouth of the stream and the lake. There is an Indian grave about 10 meters northwest of the station. The station is on a large rock that projects about 0.5 meter out of the ground.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1212 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the point on the south side of the second narrows east from the west end of Watap Lake. The station is on the east side of the point, on a bowlder about 1 meter in diameter, about 15 meters from the narrows, about 3 meters from the lake shore, and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1213** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Watap (Rove) Lake about 250 meters from the west end of the lake and just opposite the high rock cliff that is on the south side of the lake. The station is on a rock outcrop about 2 meters back from and 1 meter above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a large rock at the water's edge, marking station "Aloe," bears south  $52^{\circ}$  10' east, 1.8 meters distant from the monument.

**Reference Monument 1214** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Watap (Rove) Lake, about 1½ miles east of the Long Portage to Rose Lake and about 180 meters south of the third narrows from the portage. The station is on a bowlder about 3 meters from the shore line and about 1.5 meters above the water.

Station mark: A standard S-inch manganese-bronze reference post set in the bowlder. A drill hole within a triangle cut in a large rock on the shore line, marking station "Bandy," bears south 49° 13' west, 20.95 meters distant from the monument.

Reference Monument 1215 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Watap (Rove) Lake, about 900 meters cast of the west end of the lake, on the sand point just west of the narrows. The station is about 2 meters from the water's edge and about 0.1 meter above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1216 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south shore of Watap (Rove) Lake, on the tip of the long narrow peninsula that makes the narrows, about  $1\frac{1}{2}$  miles west of the east end of the lake. The station is on a solid rock about 6 meters from the shore and about 1 meter above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large fixed rock near the water's edge, marking station "Betwixt," bears north 63° 12' west, 4.03 meters distant from the monument.

Reference Monument 1217 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921).—On the north shore of Watap (Rove) Lake, about 800 meters east of the west end of the lake. The station is on a large rock, 3 meters from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1218 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Watap (Rove) Lake, 1½ miles west of Watap Portage, on the rocky point 200 meters east of the narrows. The point terminates in a rocky knoll about 12 meters high. The station is on top of this knoll on a large rock. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1219** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of Watap Lake and on the north side of the first narrows east of the west end of the lake. The station is on a large rock about 2.4 meters from the shore and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1220 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south side of Watap Lake, about 700 meters east of the eastern narrows of the lake. The station is about 240 meters back from the shore line, on the extreme edge of the high cliff overlooking the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1221 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of Watap Lake. The station is on the point on the north side of the second narrows from the west end of the lake. It is on the eastern side of the point, on a granite bowlder about 1.2 meters in diameter, about 1.8 meters from the shore and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1222 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Watap (Rove) Lake, 1,050 meters west of Watap Portage, at the east end of the narrow part of the lake. The station is on a large fixed rock 1.5 meters from the water's edge and 0.3 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1223 (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Watap Lake. The station is between the second and third narrows from the west end of the lake. It is about 240 meters west of the third narrows, about 9 meters from the lake shore, and about 2.4 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base about 1 foot square.

Reference Monument 1224 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the shore of Mountain Lake, in the southwestern angle of the lake, about one-half mile east of the extreme western end of the lake. The station is on the extreme tip of the point of a long narrow peninsula, on a rock, about 1.5 meters from the water's edge and about 0.7 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1225** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore of Watap (Rove) Lake, on the point on the north side of the narrows about 1% miles west of the east end of the lake. The station is on a bowlder about 12 meters from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder. A bronze disk set in a large rock near the water's edge, marking station "Betwixt," bears south 55° 25' east, 35.11 meters distant from the monument.

**Reference Monument 1226** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, 1½ miles east of the west end of the lake, on the first point of the shore west of reference monument 1228. The station is on a large rock, about 1 meter from the water's edge and 0.5 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1227** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of the east and largest part of Watap Lake, about 250 meters almost due north across the bay from the narrows, which are at the west end of this part of the lake. The station is about 2 meters from the shore line and about 1 meter above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base 18 inches square.

Reference Monument 1228 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, about 1½ miles east of the west end of the lake, just under a high and prominent bluff point that is opposite two small bays on the north shore of the lake, and three-fourths mile southwest of the little rocky island on which triangulation station "Andrew" is located. The station is on a large rock just at the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1229 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Watap (Rove) Lake, 1¼ miles west of the east end of the lake, and on the second point of the shore west of the first narrow place from the east. The station is on the smooth rock ledge, 2.4 meters from the water's edge. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1230 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, about 2 miles east of the west end of the lake. The station is on a large rock 1.5 meters from the shore line on the point southwest of the tip of the high peninsula that separates the big bay on the north shore from the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1231 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Watap (Rove) Lake, 1,300 meters west of Watap Portage and about 300 meters west of where the lake

first narrows. The station is on a solid ledge on a small projecting point. It is about 1 meter from the water's edge and but a few centimeters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1232** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, 2<sup>3</sup>/<sub>4</sub> miles east of the west end of the lake. The station is on a point of the shore one-half mile southeast of the little bare rocky island that lies 100 meters offshore just west of the big bay on the north shore. It is on a large rock about 2 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1233 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Watap (Rove) Lake, 1,050 meters west of Watap Portage, at the east end of the narrow part of the lake. The station is on a large flat ledge of rock that projects about 5 meters out from the timber line. It is 2 meters from the water's edge and 0.3 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1234 (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, on the first rocky point west of and about 1½ miles from the narrows of the lake. The station is on a large rock, about 1.5 meters back from the water's edge and about 0.3 meter above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1235 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Watap (Rove) Lake, 900 meters west of Watap Portage and about 300 meters east of the narrow part of the lake. The station is on the smooth rock ledge, about 2 meters from the water's edge and 0.3 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1236** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Mountain Lake, on the prominent point about 1 mile west of the narrows of the lake. The station is on a gray bowlder about 6 meters from the shore line and 2.4 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1237 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the west end of the small rocky island in the east end of Watap Lake, about 120 meters northwest of the west end of Watap Portage. It is on solid rock about 2.4 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1238** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, about 2¼ miles from its eastern end, on the rocky point just west of the narrows. A vista was cut to the east to reference monument 1240 about 460 meters distant. The station is on a large rock 1.5 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1239** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the west end of Mountain Lake, on the shore, 2 meters from the east end of the portage trail to Watap (Rove) Lake. The station is on a large flat rock or ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. Boundary monument 9 bears north  $72^{\circ} 25'$  west, 11.77 meters distant from the monument.

**Reference Monument 1240** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Mountain Lake, at the first narrow place from the east end and directly opposite the first rocky point on the Canadian shore, on which point station "Astrid" is situated. The station is 2 miles from the east end of the lake. It is on a rock about 1.5 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1241 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the small island in the west end of Mountain Lake, about 700 meters east of Watap Portage. The station is on the ledge on the south end of the island, about 2 meters from the water and about 1.5 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1242 (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Mountain Lake, about 1,300 meters west of the east end of the lake. The station is on a gray bowlder about 1 meter in diameter, about 3 meters inland from the shore, and about 1 meter above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1243** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Mountain Lake on a point of the shore line about 1 mile east of the west end of the lake. The station is on a large rock at the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1244 (Minnesota, Cook County; W. B. Fairfield, 1910; 1921).—On the south shore of Mountain Lake, on the rocky point beneath the first rocky cliff west of Lesser Cherry Portage, which is at the east end of the lake. Very large bowlders have fallen from the cliff. The station is on one of these bowlders at the water's edge, just west of a slide of small rocks from the cliff. It is about 0.6 meter above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1245** (Ontario, Thunder Bay District; E. R. Martin, 1917).—On the north shore of Mountain Lake, about 1% miles east of the west end of the lake. The station is on a little point between two small bays. It is on a large rock about 4.5 meters inland from the shore line and about 2.4 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1246** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—At the east end of Mountain Lake, on the south side of the stream flowing to Lily Lakes. The station is on a rock about 1.5 meters square, about 12 meters from the head of the stream, and about 2.4 meters from the shore of the stream at the first turn after leaving the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1247** (Ontario, Thunder Bay District; E. R. Martin, 1917),—On the north shore of Mountain Lake, about midway between the ends of the lake. The station is on the straight shore line, about 750 meters west of the large square jog in the shore. It is on a granite bowlder about 1.5 meters in diameter, about 3.6 meters from the shore line, and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1248 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south side and about 25 meters west of the mouth of the stream flowing from Mountain Lake into Fan Lake, the western of the Lily Lakes.

Station mark: A standard 8-inch manganese-bronze reference post set in a ledge.

Reference Monument 1249 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Mountain Lake, on the rocky, wooded, rounding point about 500 meters east of the large bay and about 1 mile west of the narrows. A vista was cut from the station to reference monument 1251. The station is on a large fixed rock, about 1 meter from the water's edge and about 0.3 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1250** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Fan Lake. The station is near the eastern end of the lake, on a ledge, about 3 meters from the water and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bronze disk set in the rock, marking station "Alpen," bears north 32° 51′ east, 48.54 meters distant from the monument.

Reference Monument 1251 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Mountain Lake, about 2¼ miles from its eastern end, on the first rocky point west of the two rocky points at the narrows. The station is on a large rock, about 2 meters back from the shore line and about 1.5 meters above the lake level. A group of 5 large birch trees stands about 8 meters east of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1252** (Minnesota, Cook County; E. R. Martin, 1917; 1921).—Between Mountain and Moose Lakes, at the west end of Vaseux Lake, the eastern of the Lily Lakes. The station is on a large rock on the south side of the mouth of the boundary stream.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1253 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Mountain Lake, about 2 miles from its eastern end, on the western of the two rocky points which are at the narrowest place in the lake. The point projects into the lake about 15 meters. The station is on the extreme tip of the point, on a large rock, about 2 meters from the water's edge and about 0.3 meter above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1254 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—At the east end of Vaseux Lake. The station is about 50 meters west of the head of the stream flowing from Vaseux Lake into Moose Lake, about 9 meters back from the shore line and about 5.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in a ledge.

**Reference Monument 1255** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the small rocky island that lies just off the point at the west side of the entrance to the large bay on the north shore of the eastern end of Mountain Lake. The station is near the middle of the rocky ridge, on the largest of the rocks, and is about 0.7 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1256 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the west end of Moose Lake, on the south side of the mouth of the boundary stream. The station is on a rock outcrop about 7.5 meters from the lake shore and about 0.8 meter above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock, marking station "Ate," bears north 77° 40′ east, 44.16 meters distant.

**Reference Monument 1257** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north side of Mountain Lake, on the first rocky point from the east end. There are some rocks in the lake about 50 meters offshore, about 100 meters to the east of the station. The station is on a large rock about 2 meters back from the water's edge and but a few centimeters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1258 (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Moose Lake, near the head of the lake, in the bight of a small cove about 500 meters southeast from the mouth of the boundary stream flowing into the west end of the lake. The station is on a solid rock on the slope about 5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock near the water's edge, marking station "Bill," bears north 56° 44′ east, 15.15 meters distant from the monument.

Reference Monument 1259 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore at the foot or east end of Mountain Lake. The station is on a rock ledge about 200 meters west of the outlet of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1260** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Moose Lake, on the second prominent point, about 2¼ miles west of Moose Portage. The station is on a large rock at the edge of the timber, about 3 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large fixed rock near the water's edge, marking station "Bear," bears north 35° 49' east, 13.2 meters distant from the monument.

**Reference Monument 1261** (Ontario, Thunder Bay District; 1917; 1921).—At the east end of Mountain Lake, on the north side of the stream flowing to Lily Lakes. The station is on a rock outcrop about 9 meters north of the stream at its first turn and about 10 meters south of the portage trail to Moose Lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1262** (Minnesota, Cook County; E. R. Martin, 1917).—On the south shore of Moose Lake, about seven-eighths mile above Moose Portage. The station is on a rock near the shore line on the first prominent point above the portage.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A drill hole within a triangle cut in a rock near the water's edge, marking station "Black," bears south 77° 18' east, 14.05 meters distant from the monument.

**Reference Monument 1263** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the west end of Fan Lake, about 300 meters east of Mountain Lake. The station is in the swamp, about 9 meters north of the mouth of the stream flowing from Mountain Lake to Fan Lake, which is the western of the two lakes known as Lily Lakes.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete pier. The pier is about 0.5 meter in diameter and 0.8 meter long, cast in a circular metal casing and set on end on a bed of large rocks in a hole dug to solid clay bottom at a depth of about 1.8 meters. Large rocks are packed around the pier filling the hole to the surface of the ground. The top of the pier is about 1 meter above the surface of the water in the stream.

Reference Monument 1264 (Minnesota, Cook County; E. R. Martin, 1917; 1921).—At the east end of Moose Lake, about 75 meters west of the outlet of the lake. The station is on a large rock about 7.5 meters back from the shore line and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large fixed rock near the water's edge, marking station "Big," bears north 14° 46′ east, 9.9 meters distant from the monument.

Reference Monument 1265 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the north shore near the east end of Fan Lake, about 600 meters east of Mountain Lake. The station is on a rock outcrop on the north side of the wagon road and about 1.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock, marking station "Alpen," bears south 17° 35' west, 26.08 meters distant.

Reference Monument 1266 (Minnesota, Cook County; W. B. Fairfield, 1910; 1921).—On the southwest side of North Fowl Lake, about 200 meters east of the portage to Moose Lake and just opposite the last bend of the narrows before entering the stream connecting North Fowl and Moose Lakes. The station is on top of a cliff about 6 meters high and about 50 meters back from the shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the solid rock.

**Reference Monument 1267** (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—Between Mountain and Moose Lakes, at the west end of Vaseux Lake, the eastern of the Lily Lakes. The station is on the north side of the mouth of the boundary stream, on a large rock, just north of the portage trail and about 4.5 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1268** (Minnesota, Cook County; Jesse Hill, 1918).—On the west shore of North Fowl Lake, about 560 meters southeast of the mouth of the boundary stream from Moose Lake. The station is on a bowlder about 20 meters back from the shore line and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1269 (Ontario, Thunder Bay District; E. R. Martin, 1917).—Between Mountain and Moose Lakes, on the north side of the eastern of the Lily Lakes, which is also known as Vaseux Lake. The station is in the muskeg, about 170 meters east from the west end of the lake and about 35 meters from the shore of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base, which rests on solid bottom 1.5 meters below the surface of the ground.

**Reference Monument 1270** (Minnesota, Cook County; Jesse Hill, 1918).—On North Fowl Lake, on the west end of the island that lies 150 meters off the west shore, about 1,000 meters below Moose Portage. The station is on the east edge of a ledge, about 6 meters from the water and about 2.4 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. Station "Bull" was north 39° west, 3.03 meters distant from the monument, but was not marked.

Reference Monument 1271 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921).—On the Canadian shore of Vaseux Lake, at the beginning of the portage to Moose Lake (Great Cherry Portage). The station is on a large smooth ledge just north of the trail, about 5 meters from the water and about 1.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1272** (Minnesota, Cook County; W. B. Fairfield, 1910; 1918).—On the west side of North Fowl Lake, on the first high cliff north of the narrows between North and South Fowl Lakes. The foot of the cliff is about 200 meters back from the lake shore. The station is on the highest point of the cliff, about 2 meters back from the edge, where there is a vertical drop of about 30 meters.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in the rock, marking triangulation station "Bab," bears north 51° east, 0.84 meter from the monument.

Reference Monument 1273 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).—On the west end of Moose Lake, on the point on the north side of the mouth of the stream from the Lily Lakes. The station is on a bowlder about 6 meters from the stream and about 6 meters from the lake shore.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder. A bronze disk set in the rock, marking station "Ate," bears north  $75^{\circ}$  04' east, 24.27 meters distant.

**Reference Monument 1274** (Minnesota, Cook County; Jesse Hill, 1918).—On the west shore of North Fowl Lake, near the middle of the narrow southern portion of the lake. The station is on a round-topped bowlder about 20 meters from the water and about 3.6 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1275** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Moose Lake, on the first prominent point one-half mile east of Great Cherry Portage. The station is on a large rock, about 8 meters back from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1276** (Minnesota, Cook County; Jesse Hill, 1918).—At the south end of North Fowl Lake, on the most northern of the islands that separate North Fowl from South Fowl Lake. The station is on the northeast point of the island on a large bowlder about 0.8 meter in height, about 24 meters from the water, and about 3 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1277** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of Moose Lake, about 1½ miles distant, and on the third prominent point from the west end of the lake. The station is on the tip of the point, on a large rock, about 2 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1278 (Minnesota, Cook County; Jesse Hill, 1918).-Between North and South Fowl Lakes, on the north point of the largest island of the group that separates the two lakes. The station is on a bowlder about 0.3 meter in height, about 75 meters from the shore line, and about 3 meters above the lake level. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1279 (Ontario, Thunder Bay District; E. R. Martin, 1917).-On the north shore of Moose Lake, about seven-eighths mile west of Moose Portage and on the high rocky point first above the portage and lying between two prominent bays. The station is on a rock near the shore line and about 1.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk set in a large fixed rock about 8 meters back from the shore, marking station "Aunt," bears south 87° 38' west, 4.36 meters distant from the monument.

Reference Monument 1280 (Minnesota, Cook County; Jesse Hill, 1918).—On the west shore of South Fowl Lake. The station is on the first prominent point, about 1 mile northwest of the South Fowl Dam across the head of Pigeon River. It is about 15 meters from the shore line and about 4.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking triangulation station "Ball," is set in the same rock at a distance of 0.3 meter from the station.

Reference Monument 1281 (Ontario, Thunder Bay District; E. R. Martin, 1917; 1921).-On the east shore of Moose Lake. The station is on a rock ledge about 150 meters north of the outlet of the lake. It is about 3 meters from the edge of the ledge and about 3.5 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1282 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).-On the west bank of South Fowl Lake, about 230 meters north of the South Fowl Dam across the head of Pigeon River. The station is on top of the high rock cliff, about 3.5 meters back from the edge of the cliff and about 35 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk stamped "280," marking Pigeon River traverse station 280, bears north 54° east, 3.2 meters distant from the monument.

Reference Monument 1282-A (Minnesota, Cook County; E. R. Martin, 1918) .- On the west side of the outlet of South Fowl Lake. The monument is about 14.6 meters south of the west end of South Fowl Lake Dam and about 4.6 meters above the lake level.

Station mark: A bronze disk set in a bowlder.

Reference Monument 1283 (Ontario, Thunder Bay District; Jesse Hill, 1918; 1921).-At the head of North Fowl Lake. The station is on a large bowlder about 40 meters north of the stream flowing from Moose Lake and about 40 meters west of the shore of North Fowl Lake. It is between the stream and the portage trail. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1284 (Ontario, Thunder Bay District; Jesse Hill, 1918) .- At the outlet of South Fowl Lake. The station is on a flat-topped ledge, about 60 meters east of the dam across the head of Pigeon River and about 30 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1284-A (Ontario, Thunder Bay District; Jesse Hill, 1918).---At the outlet of South Fowl Lake. The station is on a flat-topped ledge about 30 meters east of the South Fowl Dam across the head of Pigeon River, on the north side of a trail and about 13 meters above the lake level. Station mark: A bronze disk marked "U. S. & C. B. Survey," set in the ledge.

Reference Monument 1285 (Ontario, Thunder Bay District; Jesse Hill, 1918).-At the head of North Fowl Lake. The monument is about 400 meters northeast of the mouth of the stream flowing into the lake from Moose Lake. It is about 80 meters north of the shore line of the lake and about 6 meters above the lake level. It is on a round-topped rock just above the ground surface in an old logging road.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1286 (Minnesota, Cook County; Jesse Hill, 1918) .- On the west bank of Pigeon River, about 1,000 meters below South Fowl Lake. The monument is on a prominent rock point about 25 meters back from the river and about 12 meters above the water. It is about 300 meters below the second rolling dam and about 200 meters above the third rolling dam. There is a small wing dam opposite.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1287 (Ontario, Thunder Bay District; Jesse Hill, 1918) .- On the north shore of North Fowl Lake, about 1,200 meters east of the mouth of the stream flowing from Moose Lake. It is on a rounded projecting point of the shore line, about 20 meters back from the shore line and about 7 meters above the lake level. It is on a bowlder whose top is almost level with the surface of the ground.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1288 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1,300 meters below South Fowl Lake. The station is on a large rock about 50 meters below the second dam below South Fowl Lake. It is about 10 meters back from the shore line and is about 3 meters above the river level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk stamped "305," marking traverse station 305, is beside it in the same rock.

**Reference Monument 1289** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the east shore of North Fowl Lake, near the middle of the eastern shore line of the eastern bay of the lake. The station is on a bowlder in the marshy ground about 30 meters back from the lake shore and about 2 meters above the lake level. At the east side of the marsh, about 200 meters distant from the station, is a high, steep rock wall which terminates in a vertical cliff at the lake shore about 350 meters south of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1290 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 1% miles below South Fowl Lake and about 500 meters below the mouth of Stump River. The station is about 6 meters back from the high-water shore line and about 1.5 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1291** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1918).—On the east shore of North Fowl Lake. The station is on the rounded bluff point that separates the eastern bay of the lake from the south reach of the lake. It is on a large rock about 9 meters back from the shore line and about 1 meter above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1292** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 500 meters below the mouth of Stump River. The station is about 120 meters below the mouth of a small creek, about 40 meters back from the river's edge, and 2.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A drill hole and cross cut in a rock on the shore line, marking traverse station 291, are 44 meters south of the monument.

Reference Monument 1293 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the east shore of the southern reach of North Fowl Lake, about 700 meters north of the most northern large island lying in the channel between North and South Fowl Lakes. The station is on a round-topped granite bowlder about 40 meters back from the shore line and about 6 meters above the lake level.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1294 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, just below the mouth of Portage Brook. The station is about 25 meters south of the bank of the river and about 35 meters east of the bank of the brook.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1295** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the east side of the channel between North and South Fowl Lakes. The station is at the head of a small bay about 500 meters north of the largest island in the channel between the two lakes. It is on a bowlder near the shore line of the flood stage of water when the dams are closed.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1296 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 450 meters below the mouth of Portage Brook and about 1 meter above normal water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a large rock.

**Reference Monument 1297** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the east side of the channel between North and South Fowl Lakes. The station is on the west shore of the peninsula opposite and about 300 meters distant from the largest island in the channel between the two lakes. It is on a bowlder projecting about 0.3 meter above the ground near the flood-water shore line when the dams are closed.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1298** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 35% miles below South Fowl Lake. The station is at a bend in the river near the middle of a stretch which runs north for about 600 meters. It is about 150 meters north of the mouth of a small brook. It is about 15 meters from the shore line and about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1299** (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1918).—On the north side of South Fowl Lake, on the rocky point just east of the narrows. This point is the only high solid land along the swampy north shore of the lake. The station is on the highest part of the point, on a large rock with some

large dead trees standing around it. When the lake is flooded the portion of the point on which the station is situated may appear as an island.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1300** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River about 3¾ miles below South Fowl Lake. The station is on a bend of the river where it turns from a northerly to an easterly course. It is about 12 meters from the shore line and about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference mark set in a concrete base.

**Reference Monument 1301** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the northeast shore of South Fowl Lake. The station is on a projecting point of the marshy shore line and is about 1¾ miles a little east of north across the lake from the head of Pigeon River. It is about 15 meters back from the sand beach and about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1302 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 4% miles below South Fowl Lake. The station is on a sharp bend of the river just below a short stretch of rapids. It is on the high bank about 30 meters from the water and about 12 meters above it. Station mark: A standard 8-inch manganese-bronze reference post set in a large rock.

Reference Monument 1303 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the south shore of South Fowl Lake, about 1 mile east of the head of Pigeon River. The station is on a rounded point of the shore line at the foot of a steep bluff. It is about 10 meters back from the water's edge and about 3 meters above the level of the lake.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock which projects a little above the ground. A bronze disk set in the rock, marking triangulation station "Alder," bears south 69° 23' west, distant 33.58 meters from the monument.

Reference Monument 1304 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 43% miles below South Fowl Lake. It is in a sharp bend of the river just above the head of a long stretch of rapids. It is about 20 meters back from the water's edge and about 2 meters above the water level. Station mark: A standard 8-inch manganese-bronze reference post set in a large rock outcrop.

Reference Monument 1305 (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1918).—On an island in South Fowl Lake, about 500 meters north of the South Fowl Dam, which is at the outlet into Pigeon River. The station is on the west end of the island on the highest part of the solid rock ledge about 50 meters back from the extreme tip of the island.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bronze disk set in the ledge, marking station "Abel," bears south 75° 45′ east, 1.3 meters from the monument.

**Reference Monument 1306** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River about 4% miles below South Fowl Lake, and about one-half mile above Camp 5 of the Pigeon River Lumber Co. The station is opposite the upper end of a low marshy island. It is about 12 meters back from the shore line and about 3 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a small rock.

**Reference Monument 1307** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 800 meters above the mouth of Swamp River. The station is on a large rock on the grassy bank, about 8 meters from the river's shore, about 2.5 meters above the water level, about 80 meters west of the mouth of the creek on the opposite side of the river, and about 200 meters downstream from an old river drivers' camp.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1308** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 800 meters above the mouth of Swamp River. The station is about 40 meters up the river from the mouth of a large creek, between the wagon trail and the river, and about 25 meters from the river.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop. A bronze disk, marking traverse station 261, is set in the rock outcrop 0.6 meter southeast of the monument.

**Reference Monument 1309** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 25 meters above the mouth of Swamp River. The station is on the high bank of the river about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1310 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about one-half mile below the mouth of Swamp River. The station is on a sharp bend of the river at

the head of the long rapids. It is on a round rock outcrop about 12 meters from the river and about 2.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

Reference Monument 1311 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about one-half mile below the mouth of Swamp River. The station is in a sharp bend of the river just above the long rapids. It is on the high bank about 2.5 meters above the level of the water. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1312** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 1½ miles below the mouth of Swamp River. The station is on the high bank of the river about 3 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1313 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 2% miles above Partridge Falls. The station is about 230 meters up the river from the mouth of a small creek, about 6 meters from the river bank and about 2.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1314** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 2 miles upstream from Partridge Falls. The station is about 7 meters from the river and about 6 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1315** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 2 miles above Partridge Falls. The station is about 30 meters back from the river and about 2.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1316 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 1% miles above Partridge Falls. The station is opposite the head of a prominent island, about 10 meters from the river and about 2.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1317** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, at the big bend of the river 1,800 meters above Partridge Falls. The station is on the highest of the rocks on the rocky point that juts out into the bend of the river and becomes an island when the river rises above ordinary stages.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, marking traverse station 188½, is set beside the monument in the same rock.

**Reference Monument 1318** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River at Partridge Falls. The station is on top of the cliff above and overlooking the falls. It is on a round-topped rock about 9 meters from the edge of cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk stamped "221," marking traverse station 221, is set in the ledge a short distance southeast of the monument.

Reference Monument 1318-A (Ontario, Thunder Bay District; Jesse Hill, 1918).—In Pigeon River, 400 meters below Partridge Falls. The station is on the north end of a triangular, wooded island.

Station mark: A bronze disk set in a small bowlder embedded in concrete which rests on bedrock.

**Reference Monument 1319** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River at Partridge Falls. The station is on the slate rock ledge just east of and above the dam, about 3 meters from the water and about 3.5 meters above it.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock with a mass of concrete around it.

**Reference Monument 1320** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, on the bend of the stream about three-fourths mile below Partridge Falls. The station is about 30 meters back from the river, about 40 meters northeast of the mouth of a small creek, and about 6 meters above the river.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop.

**Reference Monument 1321** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, at the bend of the river about three-fourths mile below Partridge Falls, about 15 meters back from the shore line, and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1322 (Ontario, Thunder Bay District; Jesse Hill, 1918).-On the north side of Pigeon River, in the bend of the stream about 1¼ miles below Partridge Falls. The station is about 40 meters back from the river and about 3 meters above the level of the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1322-A (Minnesota, Cook County; Jesse Hill, 1918).-On the south bank of Pigeon River, on the big bend of the river about 1¼ miles below Partridge Falls. There are four small brooks entering this bend of the river at intervals of from 30 to 100 meters. The station is on the bank on the east side of the mouth of the third one of these brooks counting from west to east.

Station mark: A bronze disk set in a bowlder embedded in concrete.

Reference Monument 1323 (Minnesota, Cook County; Jesse Hill, 1918).-On the south bank of Pigeon River at The Cascades. The station is on the high rock ledge that is north of the dam and west of the long sluiceway. It is about 6 meters above the water level above the dam and about 25 meters above the water in the gorge below the dam and northwest from the station.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1324 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).-On the north bank of Pigeon River, on the point just above the head of The Cascades. The station is on the highest part of the rocky ledge about 25 meters south of the dam.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bronze disk, stamped "199," is set in the rock south 30° east, 0.97 meter distant from the monument.

Reference Monument 1325 (Ontario, Thunder Bay District; Jesse Hill, 1918).-On the north side of Pigeon River, about 1 mile below The Cascades. The station is on the high bluff about 80 meters east of the sharp bend where the river turns south and leaves the canyon. It is about 20 meters above the river. Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop.

Reference Monument 1326 (Minnesota, Cook County; Jesse Hill, 1918) .- On the south side of Pigeon River, about 1 mile below The Cascades. The station is on the top of the high rock point at the mouth of the canyon. It is on the highest part of the ledge, about 9 meters back from the end of the high point. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1327 (Minnesota, Cook County; Jesse Hill, 1918) .- On the south bank of Pigeon River, about 11/2 miles below The Cascades. The station is on a large rock ledge, about 3 meters above the

water and about 1 meter back from the water's edge. There is an old abandoned lumber camp on the opposite side of the river and about 150 meters distant.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1328 (Ontario, Thunder Bay District; Jesse Hill, 1918) .- On the north bank of Pigeon River, about 1% miles below The Cascades. The station is about 9 meters back from the river's edge and about 2.5 meters above the water level. An abandoned lumber camp stands about 100 meters to the northeast of the station.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop.

Reference Monument 1329 (Ontario, Thunder Bay District; Jesse Hill, 1918) .-- On the north bank of Pigeon River, about 21/2 miles below The Cascades and about 200 meters upstream from a large timbered island that lies in the bend of the river where it turns from an easterly course to a northeasterly course. The station is about 12 meters from the shore line and about 1.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1330 (Minnesota, Cook County; Jesse Hill, 1918).-On the south bank of Pigeon River, about 3 miles below The Cascades. The station is at a sharp bend of the river opposite a large island. It is about 25 meters from the shore line and about 2 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1331 (Ontario, Thunder Bay District; Jesse Hill, 1918).-On an island in Pigeon River, about 3 miles below The Cascades. The station is on the south shore of and about 60 meters below the head of a large island lying in a sharp bend or loop of the river.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1332 (Minnesota, Cook County; Jesse Hill, 1918).-On the south bank of Pigeon River, about 1½ miles above the mouth of Arrow River. The station is about 50 meters upstream from the low falls that are in a short right-angle bend of the river. The station is on the high bank about 7 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a round-topped rock outcrop.

**Reference Monument 1333** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 1½ miles above the mouth of Arrow River. The station is on the sloping bank at the falls where the river makes a short right-angle turn to the south. It is about 5 meters above and 5 meters from the water's edge.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop.

Reference Monument 1334 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, on the point opposite the mouth of Arrow River. The station is about 15 meters back from the river bank and about 3.5 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1335** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the bank on the north side of Pigeon River and the east side of Arrow River at the junction of the two streams. The station is about 10 meters from the water's edge and about 9 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1336** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north side of Pigeon River, in the southern part of the loop of the river known as the Ox Bow. The station is about 70 meters upstream from the extreme southern bend of the loop and opposite the head of a small island. It is about 10 meters back from the shore line and about 2 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1337** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River at The Tunnel, about 1,100 meters above the Scott Highway Bridge. The station is on the top of the high cliff directly over the gorge at its deepest place. It is about 2 meters back from the edge of the cliff.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1338** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, about 1,100 meters upstream from the Scott Highway Bridge. The station is on the high, bare, rocky point above the cliffs at The Tunnel. It is about 50 meters back from the edge of the cliff and about 45 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1339** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, just west of the Scott Highway Bridge. The station is about 25 meters south of the river bank and about 18 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1340 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, just west of the Scott Highway Bridge. The station is about 10 meters north of the river bank and about 20 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base which rests on solid rock.

**Reference Monument 1341** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the large island in Pigeon River, 1 mile below the Scott Highway Bridge. The station is on the south shore of the island about midway between the head and foot of the island. It is on a large bowlder near the shore line and about 1.2 meters above high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1342 (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of the main channel of Pigeon River, about 1¼ miles below the Scott Highway Bridge. The station is on the south side of the point which becomes an island at high water—the second large island below the bridge. It is on a ledge about 4.5 meters from the water, about 60 meters west of the downstream point of the island, and about 3 meters above the water level.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1343** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, at Horn Rapids. The station is on top of the cliff on the rock point at the head of the rapids, about 0.8 meter from the edge of the cliff and about 4.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. A bench mark, a bronze disk stamped "861," is about 8 meters east of the station.

**Reference Monument 1344** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River at Horn Rapids. The station is on top of the high rock point about 3.5 meters from the water and about 2 meters above the top of the falls.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1345** (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about halfway between Horn Rapids and Little Falls. The station is at the bend just east of the south loop of the river. It is about 7 meters from and about 2.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1346 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about halfway between Horn Rapids and Little Falls. The station is at the bend just east of the south loop of the river. It is between the highway and the river bank, about 20 meters from the river and about 15 meters from the highway.

Station mark: A standard 8-inch manganese-bronze reference post set in a bowlder.

Reference Monument 1347 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River at Little Falls, about 3½ miles above the mouth of the river. The station is on the barrier ledge over which the water falls, about 2 meters from the edge of the rock and about 3 meters above the falls. Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

Reference Monument 1347-A (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 3½ miles above the mouth of the river. The station is at the narrow gorge at the head of the rapids, 100 meters above Little Falls. The station is on the barrier ledge about 20 meters west of the head of the gorge.

Station mark: A bronze disk stamped "1347A" set in the ledge.

Reference Monument 1348 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River at Little Falls, about 3½ miles above the mouth of the river. The station is on the barrier ledge over which the water falls. It is about 9 meters from the falls and about 2.5 meters above them.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bronze disk, stamped "40," marking traverse station 40, is set in the ledge about 2.4 meters north of the monument.

Reference Monument 1348-A (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, about 3½ miles above the mouth of the river. The station is at the narrow gorge at the head of the rapids 100 meters above Little Falls. It is on the barrier ledge, about 10 meters back from the water and about 4.5 meters above it.

Station mark: A bronze disk stamped "1348A" set in the ledge.

Reference Monument 1349 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 620 meters above High Falls and about 100 meters below the mouth of "The Canyon." The station is on a flat rock, about 2 meters across and about 1.5 meters high, just above high-water mark. Station mark: A standard 8-inch manganese-bronze reference post set in the rock.

**Reference Monument 1349–A** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River about 650 meters upstream from High Falls and just below the gorge known as "The Canyon." The station is on the solid rock point just opposite the lower end of a long wing dam which blocks the head of a high-water channel on the south side of the river.

Station mark: A bronze disk stamped "1349A" set in the rock.

Reference Monument 1350 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south shore of Pigeon River at High Falls. The station is on the rocky point about 10 meters upstream from the south end of the dam. It is on a solid ledge near the shore line at high-water mark.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge.

**Reference Monument 1351** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River at High Falls. The station is on the high bank just northeast of the dam, 12 meters north of the sluiceway, about 4 meters above the top of the falls, and beside the trail leading to the dam. It is on a solid ledge.

Station mark: A standard 8-inch manganese-bronze reference post set in the ledge. A bench mark, a bronze disk stamped "722," is set in the rock 0.45 meter east of the station.

Reference Monument 1352 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, about 400 meters below High Falls. The station is on the first point upstream from the group of small islands in the bay below the falls and is about 29 meters back from the river bank.

Station mark: A standard 8-inch manganese-bronze reference post set in a rock outcrop.

**Reference Monument 1353** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 400 meters below High Falls. The station is on the point of the shore north of the group of islands lying in the bay below the falls. It is about 9 meters from the river and about 3.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1354 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River on the point of the shore where the river becomes narrow below the bay that lies below High Falls. The station is on the bluff, about 15 meters back from the river and about 9 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1355** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River and on the east side of the mouth of an inlet about one-half mile below High Falls. The station is about 8 meters back from and about 2.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1356 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 1 mile above its mouth. The station is on the bend of the river where the first high ground comes down to the river from the north. It is about 10 meters from and 3.5 meters above the water. Station mark: A standard 8-inch manganese-bronze reference post set in a large bowlder.

Reference Monument 1357 (Minnesota, Cook County; W. B. Fairfield, 1908; 1918).—On the south bank of Pigeon River, about five-eighths mile below High Falls. The station is on the low bluff bank on the point in the sharp bend of the river just below the wide part below the falls. It is about 15 meters from and 6 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base 0.3 meter square and 1.2 meters deep. The part of the base underground is inclosed in a large tile resting on a large mass of concrete.

Reference Monument 1358 (Minnesota, Cook County; Jesse Hill, 1918).—On the south bank of Pigeon River, nearly 1 mile above its mouth. The station is on the bluff bank about 50 meters north of the mouth of a small creek, about 20 meters from the river and about 12 meters above the level of the water in the river. Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1359** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River a little less than 1 mile above the mouth of the river and opposite the head of the second long island above the mouth of the river. The station is about 6 meters from and 25 meters above the river. It is about 18 meters from the main building of an abandoned lumber camp.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

**Reference Monument 1360** (Minnesota, Cook County; W. B. Fairfield, 1908; 1918).—On the south shore of Pigeon River, in the first big bend of the river 1,200 meters above its mouth. The station is on top of the bank, about 15 meters from the river, about 25 meters upstream from a small but deep gulch and spring branch, and about 5 meters above the water. There are some graves between the station and the gulch. It is on a large bowlder which was placed with its top just above the surface of the ground.

Station mark: A standard 8-inch manganese-bronze reference post set in the rock. There is a bronze disk stamped "6," marking triangulation station 6, set in the rock beside the monument.

**Reference Monument 1361** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about one-half mile above the mouth of the river. The station is in the first bend of the river above the mouth and opposite the head of the first long island above the mouth. It is about 15 meters from the river and about 1.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base.

Reference Monument 1362 (Ontario, Thunder Bay District; W. B. Fairfield, 1908; 1918).—On the north shore of Pigeon River, about 550 meters upstream from the mouth of the river. The station is on a large, flat bowlder between the wagon road and the river, about 8 meters from each. It is a little downstream from the lower end of the first long island above the mouth of the river. The bowlder was hauled from a distance and placed for the purpose of marking the station, there being no native bowlders in the vicinity.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Reference Monument 1363 (Minnesota, Cook County; W. B. Fairfield, 1908; 1918).—On the south shore of Pigeon River about 650 meters upstream from the mouth of the river. The station is about 30 meters down-stream from a little spring branch and is nearly opposite the lower end of the first long island above the mouth of the river. It is on a large bowlder placed nearly flush with the ground, about 12 meters from the shore line. Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1364** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north bank of Pigeon River, about 300 meters above the mouth of the river. The station is on the south side of the wagon road, about 30 meters from the river and about 1.5 meters above the water.

Station mark: A standard 8-inch manganese-bronze reference post set in a concrete base. A drill hole in a bowlder, marking triangulation station "Ban," bears south 15° 10′ east, 27.65 meters distant.

**Reference Monument 1365** (Minnesota, Cook County; W. B. Fairfield, 1908; 1918).—On the south bank, about one-fourth mile above the mouth of Pigeon River. The station is on a large bowlder set in place with its top projecting a little above the ground, about 2.5 meters above the river and about 12 meters back from the shore line.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

**Reference Monument 1366** (Minnesota, Cook County; W. B. Fairfield, 1908; 1918).—On the rocky point on the south side of the mouth of Pigeon River. Several large rocks stick up out of the water just off the point. The station is on a very large flat bowlder that projects from the ground about 1 meter and is about 12 meters back from the point.

Station mark: A standard 8-inch manganese-bronze reference post set in the bowlder.

Monument I. W. C. No. 3 (Ontario, Thunder Bay District; International Waterways Commission, 1911; 1918).—On the point on the north side of the mouth of Pigeon River, about 70 meters north of the river and about 30 meters back from the lake shore. The monument is of concrete, in the form of the frustum of a cone with a hemispherical top. It is 30 inches high, 24 inches in diameter at the base, 18 inches in diameter at the top of the frustum, and the hemispherical crown has a radius of 9 inches. The foundation extends 5 feet below the surface of the ground. The number is cast in one side.

Station mark: A brass plug three-fourths inch in diameter set in the crown of the monument.

Monument 1 (Minnesota, Lake County; Ontario, Rainy River District; E. R. Martin 1916; 1921.).—At the west end of Swamp Portage between Swamp and Cypress Lakes. The station is about 45 meters from Cypress Lake and on the south side of the portage trail.

Station mark: A 5-foot bronze post with a concrete base 3 feet square set in a hole blasted out of the solid rock. Reference monument 938, an 8-inch manganese-bronze post, is 3.7 meters west of the station.

Monument 2 (Minnesota, Lake County; Ontario, Rainy River District; E. R. Martin, 1916; 1921).—Between Cypress and Swamp Lakes, on the Swamp Portage trail at the divide about midway between the two lakes.

Station mark: A conical bronze post with a rounded apex standing 22 inches above a raised circular concrete base which rests on and is firmly attached to a subbase of concrete 3 feet square set 3 feet in the ground and resting on solid bedrock.

Monument 3 (Ontario, Rainy River District; Minnesota, Lake County; E. R. Martin, 1916; 1921).—On the Swamp Portage trail, about 65 meters west of the west end of Swamp Lake.

Station mark: A 5-foot bronze post set in a concrete base about 3 feet square.

Monument 4 (Ontario, Thunder Bay District; Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the south side of North Lake, at the north end of the old Hudson's Bay Company Portage trail to South Lake. The station is 11 meters from the shore line and about 2 meters above the water level.

Station mark: A conical bronze post set in a raised circular concrete base which rests on a concrete subbase 3 feet square.

Monument 5 (Ontario, Thunder Bay District; Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the height of land on the old Hudson's Bay Company Portage trail between North and South Lakes. The station is on a rock ledge.

Station mark: A conical bronze post set in a raised circular concrete base which rests on a concrete subbase 3 feet square.

Monument 6 (Ontario, Thunder Bay District; Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the north shore of South Lake. The station is on a rock ledge about 10 meters from the shore line on the old Hudson's Bay Company Portage trail to North Lake.

Station mark: A conical bronze post set in a raised circular concrete base which rests on a concrete subbase 3 feet square.

Monument 7 (Ontario, Thunder Bay District; Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the east end of Watap (Rove) Lake at the west end of the portage trail to Mountain Lake.

Station mark: A conical aluminum-bronze post, with a rounded apex, about 2 feet high set in a raised circular concrete base about 1½ feet high, which, in turn, is set on a concrete subbase about 3 feet square and level with the surface of the ground.

Monument 8 (Ontario, Thunder Bay District; Minnesota, Cook County; E. R. Martin, 1917; 1921).—Between Mountain and Watap Lakes. The station is on the portage trail about 160 meters west of Mountain Lake. Station mark: A conical aluminum-bronze post, with a rounded apex, about 2 feet high, set in a raised

circular concrete base which rests on a concrete subbase about 3 feet square and level with the surface of the ground.

Monument 9 (Ontario, Thunder Bay District; Minnesota, Cook County; E. R. Martin, 1917; 1921).—On the extreme western shore of Mountain Lake, at the east end of the portage trail between Mountain and Watap Lakes. The station is about 10 meters back from and 2 meters above the water.

Station mark: A conical aluminum-bronze post, with a rounded apex, about 2 feet high set in a raised circular concrete base about  $1\frac{1}{2}$  feet high which, in turn, is set on a concrete subbase about 3 feet square and level with the ground. Reference monument 1239 is 11.77 meters east of the monument.

## NORTHWESTERNMOST POINT OF LAKE OF THE WOODS TO LAKE SUPERIOR, FIRST-ORDER SCHEME

Warroad North Base=Boundary Monument 909 (Manitoba, Provencher District; Minnesota, Roseau County; C. H. Sinclair, 1912; Geodetic Survey of Canada, 1924).—On the forty-ninth parallel international boundary at the crossing of the Canadian National Railway about 4 miles west of where the boundary intersects Lake of the Woods. The station is on the east side of the railroad track.

Station mark: A 5-foot cast-iron post set in a concrete base. The mark is in unstable soil and was found out of plumb in 1915. It was straightened up but was again found out of plumb in 1917. It was straightened up once more and additional concrete placed around the base, making the base 5 feet square and 2½ feet deep, resting on elay bottom. An 85-foot tower was built over the station, its seven legs being set in concrete foundations 3 feet deep.

Warroad South Base (Minnesota, Roseau County; C. H. Sinclair 1912; U. S. Coast and Geodetic Survey, 1923).—About 1 mile north of Warroad, Minn., on the east side of the Canadian National Railway, 700 meters north of the Great Northern Railway crossing. The station is 14.575 meters east, at right angles, from the east rail of the track.

Station mark: A bronze disk marked "U. S. & C. B. S.," set in a block of concrete 2 feet square and 2½ feet deep, with the top a little above the surface of the ground. The subsurface mark is a bronze disk set in concrete 2½ feet underground; under this is another concrete block with a cross in its top surface. A cross cut in the top of a concrete post 8 by 8 by 18 inches, set flush with the ground, is 26.622 meters west of the station. Another like mark is 3.885 meters west of the station. Both reference marks are inside the railway right-of-way fences, one on either side of the track. A 55-foot tower was used at this station.

Thunder (Manitoba, Provencher District; Jesse Hill, 1917; U. S. Coast and Geodetic Survey, 1923).— On the west side of Lake of the Woods, about 1,300 meters northwest of Buffalo Point and about 1,100 meters north of the international boundary line. The station is on a sandy ridge about 10 meters above the lake level. It may be reached by a trail from the Indian houses on Buffalo Point.

Station mark: A bronze disk set in concrete. A 65-foot tower was built over the station for observing.

West Willow (Minnesota, Roseau County; Jesse Hill, 1917).—On the south shore of Lake of the Woods, about 1¼ miles west of the mouth of Willow Creek and in the eastern part of fractional section 33, township 163 north, range 35 west. The station is on a sand bar at the lake shore and is backed by a swamp which extends a half mile inland.

Station mark: A bronze disk set in a concrete block 2 feet square and 3 feet deep. A 35-foot tower was used for observing, and the legs of the tower were set in concrete.

Stoney (Minnesota, Lake of the Woods County; C. H. Sinclair 1913; 1917).—On the north side of Lake of the Woods, on Stony Point. The station is about 300 meters southeast of the shore of Sand Point Bay, which lies south of the mouth of Stony Creek. It is in the southwest corner of section 35, township 166 north, range 35 west. It is on the first rise of ground from the muskeg as approached from the south or west.

Station mark: A bronze disk marked "U. S. & C. B. S." set in a concrete block flush with the ground. A 75-foot tower was used for observing.

Miller (Minnesota, Lake of the Woods County; Jesse Hill, 1917).—On the south shore of Lake of the Woods, about 1<sup>1</sup>/<sub>4</sub> miles southeast of Long Point. The station is about 200 meters inshore southwest of a shallow indenture of the shore line and is in the edge of burnt timber on bare rock about 10 meters above the lake level.

Station mark: A bronze disk set in the rock. An arrow pointing toward the station is cut in the rock, south  $5^{\circ}$  east (magnetic), 7.71 meters from the station; and a second arrow cut in like manner is south  $85^{\circ}$  east (magnetic), 7.16 meters from the station.

Garden (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—On Lake of the Woods, near the middle of the lake, on Garden Island. The station is about one-third mile from the northwest end of the island and is nearer the north shore than the south shore. It is best approached from the north shore, as the south shore is swampy. Lines cut in 1913 through the heavy timber show the location of the station.

Station mark: A bronze disk set in a concrete block. A 40-foot tower was used for observing.

**Big** (Ontario, Kenora District; C. H. Sinclair, 1913; 1917).—On Lake of the Woods, on the southwest point of Big Island. The station is on a bare rock about 3½ meters above the lake level. Back of the rock is a growth of large hardwood timber.

Station mark: A bronze disk set in the solid rock. A 55-foot tower was used for observing.

96030-31-32

Reference Monument 48. (See p. 362.)

Burton (Ontario, Rainy River District; C. H. Sinclair, 1913; 1917).—On Lake of the Woods, about 7½ miles northeast of the mouth of Rainy River. The station is on the bare rock on the west end of Burton Island. Station mark: A bronze disk set in the solid rock.

War (Minnesota, Roseau County; U. S. Coast and Geodetic Survey, 1923).—About one-half mile west of Warroad, Minn., at the first curve of the Canadian National Railway track west of Warroad. The station is at the intersection of the tangents of the east rail of the track.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 19.29 meters from the station in azimuth 321° 49'.

**Road** (Minnesota, Roseau County; U. S. Coast and Geodetic Survey, 1923).—About 1 mile east of Warroad, Minn. The station is in the field of H. Moorehead, at the first curve east of Warroad, on the Canadian National Railway. It is at the intersection of the tangents of the east rail from the north and the southwest rail from the east.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk, with the arrow pointing toward the station, is set in a square concrete block 104.28 meters from the station in azimuth 307° 49'.

**Red** (Minnesota, Roseau County; U. S. Coast and Geodetic Survey, 1923).—About 3 miles east of Warroad, Minn., at the second curve on the Canadian National Railway east of Warroad. The station is on the extension of the south rail of the track from the west and 7.475 meters south of the extension of the north rail from the east at a point 95 meters west of milepost 35.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with arrow pointing toward the station is set in a square concrete block 28.35 meters from the station in azimuth 122° 11'.

Full (Minnesota, Roseau County; U. S. Coast and Geodetic Survey, 1923).—About 3 miles east of Swift, Minn., and on the highest point on the line between Swift and Roosevelt, Minn. The station is 9.826 meters north of the north rail of the Canadian National Railway, at a point 199.3 meters east of milepost 29.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 7.27 meters from the station in azimuth 228° 47'.

**Dout** (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—On the Canadian National Railway about 1 mile east of Roosevelt, Minn. The station is at the first curve of the railway east of Roosevelt. It is on the extension of the south rail from the east and 6.514 meters south of the extension of the north rail from the west.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground.

Wet (MInnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About 2¼ miles east of Roosevelt, Minn., on top of the bank of the cut of the Canadian National Railway. The station is 12.911 meters south of the south rail of the track at a point 240 meters east of milepost 23.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 47.50 meters from the station in azimuth 189° 50'.

May (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About 1¼ miles west of Williams, Minn. The station is on a knoll 8.018 meters north of the south rail of the Canadian National Railway. It is 3 meters east of a private road-crossing.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 22.80 meters from the station in azimuth 37° 57′.

**Spur** (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About  $2\frac{1}{2}$  miles east of Williams, Minn., and about one-tenth mile west of Cedar Spur, Minn. The station is 3 meters north of the fence at the west switch and 7.641 meters south of the south rail of the Canadian National Railway.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a concrete block 22.73 meters from the station in azimuth 189° 26'.

**Hen** (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About 1 mile west of Graceton, Minn., and about 8 meters east of a road crossing where the main highway comes close to the Canadian National Railway. The station is 1.572 meters south of the south rail of the railroad and between the main track and the passing track.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 17.82 meters from the station in azimuth  $24^{\circ} 40'$ .

Ton (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About 3 miles east of Graceton, Minn. The station is 8.040 meters north of the south rail of the Canadian National Railway at a point 5 meters west of the crossing of the main highway.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete 3 by 3 by 4 feet in size. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 26.02 meters from the station in azimuth 344° 21'.

**Bon** (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About one-third mile west of Pitt Station on the Canadian National Railway. The station is 11.477 meters north of the south rail of the Canadian National Railway at a point 150 meters east of the west switch at Pitt.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a concrete block 3 by 3 by 4 feet in size. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 27.20 meters from the station in azimuth  $35^{\circ}$  49'.

**Brush** (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923).—About 5 miles west of Baudette and about 1½ miles east of Pitt, Minn. The station is at the point of intersection of the tangents at the first curve west of Baudette on the Canadian National Railway. It is 17.91 meters south of the south rail of the track.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square block of concrete 14.99 meters from the station in azimuth 119° 16'.

**Baudette** (Minnesota, Lake of the Woods County; U. S. Coast and Geodetic Survey, 1923; 1925).—In the northwest part of the town of Baudette. The station is on the extension from the west of the north rail at the curve of the Canadian National Railway to the west of Baudette. It is about 15 meters south of the main track of the railway, in the middle of a roadway leading to the back entrance of the Cross Dodds Lumber Co., and about 15 meters west of their back gate.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square block of concrete in azimuth 102° 43', 86.82 meters from the station.

Toad (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1 mile west of the town of Rainy River, Ontario, and on the first curve of the Canadian National Railway east of the international bridge between Baudette and Rainy River. The station is about 40 meters to the east of the first road crossing the track east of the bridge and about 50 meters from the nearest track. It is on the extension or tangent of the center line of the main track to the east.

Station mark: A standard Unted States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 46.21 meters from the station in azimuth 71° 17'.

**Gip** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 1 mile east of the town of Rainy River, Ontario. The station is 1.924 meters south of the south rail of the Canadian National Railway at a point 977 meters west of milepost 141.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 11.705 meters from the station in azimuth 2° 38'.

Fritz (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 2 miles east of the town of Rainy River, Ontario. The station is 2.620 meters south of the south rail of the Canadian National Railway at a point 976 meters west of milepost 140.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 12.32 meters from the station in azimuth 3° 11'.

**Ray** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—Near Sleeman, Ontario. The station is 10.89 meters north of the south rail of the Canadian National Railway at a point 155 meters east of milepost 138.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 38.91 meters from the station in azimuth 50° 51'.

Henri (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 2½ miles west of Pinewood, Ontario. The station is at the curve of the Canadian National Railway, 552 meters west of milepost 133. It is on the extension of the south rail from the west and 3.212 meters south of the extension of the north rail from the east.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 11.385 meters from the station in azimuth 293° 15'.

Reddy (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1½ miles west of Pinewood, Ontario. The station is 7.353 meters south of the south rail of the Canadian National Railway at a point 1,071 meters east of milepost 133.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set 16.38 meters from the station in azimuth 185° 30'.

Myrtle (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1¾ miles east of Pinewood, Ontario. The station is 3.884 meters south of the south rail of the Canadian National Railway, at a point 262 meters west of milepost 129.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 10.83 meters from the station in azimuth 345° 01'.

**Delf** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1¼ miles west of Stratton, Ontario. The station is 3.752 meters north of the south rail of the Canadian National Railway at a point 878 meters west of milepost 125.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 17.55 meters from the station in azimuth  $10^{\circ}$  44'.

**Pipp** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 4¾ miles west of the town of Barwick, Ontario. The station is between the main track and the spur track of the Canadian National Railway, at a point 1.525 meters south of the south rail of the main track and 477 meters west of milepost 120

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 13.00 meters from the station in azimuth 28° 47'.

**Grace** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 1½ miles west of Barwick, Ontario. The station is 3.21 meters north of the south rail of the Canadian National Railway at a point 22 meters west of milepost 117.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 11.86 meters from the station in azimuth 196° 25'.

Zip (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 1 mile east of Barwick, Ontario, at the curve of the Canadian National Railway, 800 meters west of milepost 114. The station is at the intersection of the tangents of the south rail of the track.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 9.98 meters from the station in azimuth 53° 57'.

**Rip** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 4½ miles west of Emo, Ontario. The station is at the intersection of the tangents of the south rail of the Canadian National Railway, at the curve 846 meters west of milepost 113.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set 22.50 meters from the station in azimuth 182° 18'.

**Pat** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—Beside the Canadian National Railway, about 3½ miles west of Emo, Ontario, and about 637 meters west of milepost 112. The station is at Tobas, Ontario, 1.456 meters south of the extension of the south rail of the track from the east and 87 meters east of the road crossing.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 90.70 meters from the station in azimuth  $83^{\circ}$  13'.

Rub (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 2¼ miles west of Emo, Ontario. The station is 9.493 meters north of the south rail of the Canadian National Railway at a point 462 meters west of milepost 111.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 22.83 meters from the station in azimuth  $28^{\circ}$  55'.

Jesse (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 1¾ miles west of Emo, Ontario. The station is at the curve of the Canadian National Railway, 431 meters east of milepost 111 and 35 meters west of bridge No. 110.72. It is on the extension of the north rail from the east and 7.313 meters south of the extension of the south rail from the west.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 54.36 meters from the station in azimuth 250° 31'.

Walt (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1 mile west of Emo, Ontario. The station is 1.605 meters north of the north rail of the Canadian National Railway, at a point 79 meters west of milepost 110.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square block of concrete 14.64 meters from the station in azimuth 214° 29'.

**Pine** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1 mile east of Emo, Ontario. The station is beside the Canadian National Railway at the second curve east of Emo. It is 1.8 meters north of the intersection of the extensions of the south rail from the east and the north rail from the west.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 14.10 meters from the station in azimuth  $52^{\circ}$  52'.

LaBelle (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 5<sup>1</sup>/<sub>3</sub> miles east of Emo, Ontario. The station is beside the Canadian National Railway, 544 meters east of milepost 105 and about 100 meters east of a private road-crossing in the rear of the LaBelle farm. It is 7.448 meters north of the south rail of the railway.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a concrete block 3 by 3 by 4 feet in size. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 21.45 meters from the station in azimuth 358° 31'.

Stone (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 6<sup>1</sup>/<sub>3</sub> miles east of Emo, Ontario, on a hill near Bishop's farm. It is 9.12 meters north of the south rail of the Canadian National Railway at a point 546 meters east of milepost 104.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 22.26 meters from the station in azimuth 321° 25'.

States (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 550 meters east of the Canadian National Railway station at Devlin, Ontario. The station is on the curve of the railway, at the intersection of the tangents of the south rail of the track.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 11.77 meters from the station in azimuth 351° 51′.

Rob (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—About 1¼ miles west of Crozier, Ontario. The station is 9.53 meters north of the south rail of the Canadian National Railway at a point 500 meters west of milepost 96.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 23.82 meters from the station in azimuth 8° 08'.

Pig (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—The station is 2.22 meters south of the south rail of the Canadian National Railway at the highest point of the track about 200 meters west of the Crozier, Ontario, railway station.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square block of concrete. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block 23.9 meters from the station in azimuth 243° 52'.

Fort Frances West Base Ecc. (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).— Near Crozier, Ontario. The station is 8.06 meters north of the south rail of the Canadian National Railway at a point 281 meters west of milepost 94 and about 354 meters west of the main highway crossing.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 23.9 meters from the station in azimuth 243° 10'. "Fort Frances west base" is 61.97 meters from the station in azimuth 0° 09'.

Fort (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—In Fort Frances, Ontario. The station is on the south side of First Street, at a point 38.25 meters from the east side of Victoria Street and about 76 meters from the east side of Christy Street.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete block countersunk 0.6 meter below the ground level. A like mark is placed about 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is set in a square concrete block on the east side of Christy Street, 5.58 meters from the south fence line and 7.11 meters from a telephone pole, in azimuth  $275^{\circ} 37'$  and distant 76.41 meters from the station.

Zero (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—On the first curve of the Canadian National Railway east of Fort Frances, Ontario. The station is 8.68 meters south of the south rail of the track at a point 10 meters east of the first road crossing west of an Indian's house.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a square concrete base. A like mark is placed 3 feet underground. A standard reference mark disk with the arrow pointing toward the station is placed in a square concrete block 24.38 meters from the station in azimuth 123° 54'.

Lake (Minnesota, Koochiching County; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake, about 5 miles east of Ranier, Minn. The station is on the most northern point of Signal Island, the most northern of the Fransen Islands. It is about 11 meters from the shore line and about 3 meters above the lake level.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole 10.00 meters from the station in azimuth 320° 46'. Boundary reference monument 270, an 8-inch bronze post, is 0.2 meter from the station in azimuth 242°, and a bronze disk set in the rock, marking triangulation station "Rainy Lake 9," is 0.206 meter from the station in azimuth 282°.

Raney=Rainy Lake 14 (Ontario, Rainy River District; James H. Van Wagenen, 1913; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake, on the south end of the first island north of Red Sucker Island. It is on a narrow rocky point about 1.5 meter above the lake level, about 8 meters from the end of the point and 2.5 meters from the shore on either side.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. This station was occupied in 1923 by the United States Coast and Geodetic Survey and called "Raney." They set one of their standard reference mark disks, with the arrow pointing toward the station, in outcropping bedrock 10.00 meters from the station. The azimuth from station to reference mark is 219° 42′.

Water=Rainy Lake 37 (Minnesota, Koochiching County; James H. Van Wagenen, 1913; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake, south of American Narrows, about 450 meters southeast of Red Sucker Island and about 300 meters from Red Pine Island. It is in the center of a bare, diamond-shaped rock which is about 15 meters long and 9 meters wide and whose top is about 1.5 meters above the normal lake level. About 30 meters eastward is another small rock whose shore line, at low water, will join that of the rock on which the station is located.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge. A standard United States Coast and Geodetic Survey reference mark disk was set in outcropping bedrock 3.701 meters from the station in azimuth 73° 40′ when the station was occupied in 1923 by a Coast Survey party. The station appears in the Coast Survey records under the name of "Water."

**Roll** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake on the southeast island of a group of five small islands lying just south of Sand Point midway between the east and west ends of Sand Point Island. The island is a mass of vertical stratified rock. The station is about 40 meters west of the east end of the island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 11.32 meters from the station in azimuth  $256^{\circ}$  10'.

Sea (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake on the south end of the large island lying just west of Mackenzie Island and on the north side of the west entrance

to Brule Narrows. The station is about 75 meters from the shore on the west side and about 50 meters from the shore on the south side.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 5.35 meters from the station in azimuth  $176^{\circ}$  13'. Boundary reference monument 286, an 8-inch bronze post, is 91.1 meters northeast of the station.

**Breaul** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake, on the long point just south of the east entrance to Brule Narrows, variously called Soldier Point and Point Observe. The station is about 100 meters west of the east end of the point.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 4.7 meters from the station in azimuth 186° 18′. Triangulation station "Rainy Lake 60," a bronze disk, and boundary reference monument 291, an 8-inch bronze post, are side by side on the east end of the point 99 meters east of the station.

Manitou (Ontario, Rainy Lake District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake, about 3¾ miles east of the east entrance to Brule Narrows, on a small, high, bare island about 50 meters southwest of Anchor Island. The station is on the highest point of the island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bed rock. Boundary reference monument 294, an 8-inch bronze post, is set in the solid rock 11.89 meters from the station in azimuth 16° 43'.

Late=Boundary (Ontario, Rainy River District; Jesse Hill, 1914; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake on a small rock island about 8½ miles east of the eastern entrance to Brule Narrows and about 5 miles northwest of Kettle Falls. It is on the northwestern island of a group of six small islands which are south of Deer Horn Point and near the international boundary. The station is on the highest point of the island about 3 meters above the lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Four reference bolts are set in the ledge as follows: 3.25 meters south, 3.80 meters west, 4.55 meters north, and 3.82 meters east of the station. The United States Coast and Geodetic Survey occupied this station in 1923 and called it "Late." They set a standard United States Coast and Geodetic Survey reference mark disk, with the arrow pointing toward the station, in outcropping bed rock 3.145 meters from the station in azimuth 302° 10′.

Joy (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Rainy Lake, on the southernmost point of Breezy Island, which is about 1½ miles north of the mouth of Kettle River.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 6.42 meters from the station in azimuth 210° 05'.

**Dog** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Kettle River at the head of Rainy Lake. The station is on Oak Point Island, about 750 meters south of Surveyors Island and the mouth of the river. It is on the highest point of the hill, about 120 meters back from the shore and nearly due east of the first narrow place in the river above its mouth.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is 6.30 meters from the station in azimuth 147° 21′. Station "Rainy Lake 90," marked by a bronze disk set in ledge rock, is 16.29 meters from the station in azimuth 144° 31′.

Bell (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—At the upper end of Rainy Lake about 700 meters east of Kettle Falls. The station is on the eastern point of the first island east of Kettle Falls and between the Canadian Channel and Kettle River.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock at an unknown distance in azimuth 334° 57′ from the station.

Knox (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—On Rainy Lake on the flat point about 600 meters due east of the Canadian dam at Kettle Falls. The station is about 400 meters due east of Oliver Knox's house and is on the northeastern part of the point.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 33.71 meters from the station in azimuth 80° 06'. Nix (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923).—Between Rainy Lake and Namakan Lake. The station is 9.1 meters west of the north end of the dam in the Canadian Channel at Kettle Falls.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 4.59 meters from the station in azimuth 88° 29'.

**Bat** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1925).—About 1 mile west of Kettle Falls and on the north shore of Namakan Lake. The station is at the east entrance to Squirrel Narrows, about 300 meters northeast of where one can get a clear view to the west through the narrows to Mica Island. It is on the highest part of the point which runs down to the shore from the west and is but a few meters from the shore line.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bed rock. A standard reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 7.25 meters from the station in azimuth 1° 21'.

**Doran** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—At the foot of Namakan Lake and about 1 mile west of Kettle Falls. The station is on the northeast corner of the point between two bays and on the south side of Squirrel Narrows, where one can first look due west through the narrows to Mica Island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. Boundary reference monument 333, an 8-inch manganese-bronze post, is 13.46 meters from the station in azimuth 267° 36'.

Bees Kees (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake, about 3 miles west of Kettle Falls. The station is on the southern high point of a small rocky island just southwest of Mica Island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. Boundary reference monument 338, an 8-inch manganese-bronze post, is 36.4 meters from the station in azimuth 186° 39'.

Pluss=Reference Monument 340 (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake. The station is on the most eastern point of the shore on the west side of Squaw Narrows.

Station mark: Boundary reference monument 340, an 8-inch manganese-bronze post set in the solid rock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is 7.17 meters from the station in azimuth 269° 16'.

Harry (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake, about 1½ miles south of Squaw Narrows. The station is on the highest point of a small island known as Lone Tree Island near the boundary line, about 300 meters northeast of Bivo Island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 19.76 meters from the station in azimuth 279° 41'.

**Rye** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake, about 6 miles southwest of Kettle Falls and about 1<sup>3</sup>/<sub>4</sub> miles south of Squaw Narrows. The station is on the highest point of the small rocky island just northwest of Erickson (or Dunsmoore) Island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 6.27 meters from the station in azimuth 191° 35'.

**Deer** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake, about 9 miles by water along the boundary route south of Kettle Falls. The station is on the southern point of Randolph Island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 18.53 meters from the station in azimuth 34° 17′. Boundary reference monument 351 bears southeast from the station 84.0 meters distant.

**Randolph** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1924).—On the south side of Namakan Lake, about 9 miles by the international boundary line southeast of Kettle Falls. The station

is on the eastern end of a high rocky ridge about one-half mile to the southward of Randolph's fishery. It is on the highest point of the bare rock at the eastern end of the ridge. The top of the ridge has a scattering growth of trees about 35 feet in height; the slopes are heavily timbered. The station may be reached by boat via Namakan Lake to Randolph's fishery, thence westward about one-half mile to the first small bay, landing at the small log cabin which stands on the hillside about 60 meters from the shore. From this cabin follow a trail up the hill to the southward about 200 meters, thence southeast to the top of the ridge and along the north rim of the ridge east to the station.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 17.93 meters from the station in azimuth  $105^{\circ}$  06'.

Namakan West Base (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake, on the small rocky island (at low water connected with the mainland) at the southern end of Blackstone Island. The station is on the extreme southern end of the island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in a drill hole in outcropping bedrock. Boundary reference monument 353, an 8-inch manganese-bronze post, is set in the rock 14.49 meters from the station in azimuth 209° 44'.

**Grassy** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1925).—On Namakan Lake on the largest island just off the entrance to Grassy Portage. The station is about 100 meters northwest of boundary reference monument 356, which is on the highest point of the island. It is about 8 meters above the lake level and about 20 meters back from the north shore of the island.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 9.20 meters from the station in azimuth  $339^{\circ}$  02'.

**Portage** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1924).—About 1½ miles south of east of the Namakan Lake end of Grassy Portage and about three-fourths mile northeast of the head of Grassy Bay of Sand Point Lake. The station is on the summit of a prominent, high, rocky, burned-over hill. The station may be reached from Grassy Portage or from the head of Grassy Bay.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in solid rock. A standard United States Coast and Geodetic Survey reference mark disk set in solid rock is 20.93 meters from the station in azimuth 201° 35'.

Namakan East Base (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1923; 1924).—On Namakan Lake, on a small island in the eastern part of the lake. The island is about 1 mile south of the mainland, about 2 miles almost due west of the mouth of Namakan River, and faces the open water of the lake to the west. It lies at the west entrance of a passage between two large islands, through which the international boundary passes just before turning toward Namakan Narrows. The island has a sheer drop of about 10 meters on the west end and slopes down to a beach on the east end. The station is near the west end.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. Boundary reference monument 360, an 8-inch manganese-bronze post, is set in the rock 13.90 meters from the station in azimuth  $42^{\circ}$  26'.

Tower (United States Coast and Geodetic Survey) (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1923; 1924).—On the north shore of Namakan Lake on a very conspicuous high, rocky, timbered point due north of Namakan Narrows and about three-fourths mile north of the lake shore. The station can be reached from the head of a small bay about 1 mile from the east end of the lake. The station bears a little west of north from the head of the bay.

Station mark: A standard United States Coast and Geodetic Survey station mark disk wedged in a drill hole in outcropping bedrock. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping bedrock 9.09 meters from the station in azimuth 207° 36'. Station "Tower," marked by a United States and Canadian Boundary Survey bronze disk, is 52.26 meters southwest by south of the station.

Fish (Ontario, Rainy River District; J. J. McArthur, 1915; U. S. Coast and Geodetic Survey, 1924).— Between David and Thompson Lakes, about 2½ miles east of David Lake and about 1½ miles west of Thompson Lake. David Lake is a tributary of Sand Point Lake; Thompson Lake lies just northwest of Wilkins Bay of Lac La Croix. The station is on the divide between the lakes and is on the steep bluff overlooking the north shore of a small lake.

Station mark: A bronze disk marked "U. S. & C. B. S." set in an outcropping bowlder. The reference mark is a Geodetic Survey of Canada bronze disk set in an outcropping ledge 11.32 meters from the station in azimuth 319° 58'.

**Vermilion** (Ontario, Rainy River District; J. J. McArthur, 1915; U. S. Coast and Geodetic Survey, 1924).— On the northeast side of Little Vermilion Lake, about 1½ miles east of the north end of the lake and about 1 mile northwest of Trout Lake. The station is on a rocky timbered hill, the highest in the vicnity.

Station mark: A bronze disk marked "U. S. & C. B. S." set in solid rock. The reference mark is a Geodetic Survey of Canada bronze disk set in solid rock 5.64 meters from the station in azimuth 8° 40'.

Center II (Ontario, Rainy River District; J. J. McArthur, 1915; U. S. Coast and Geodetic Survey, 1924).— On the north side of Lac La Croix, about 1 mile east of Wilkins Bay. The station is about three-fourths mile northwest of the prominent point which is opposite Snow Bay and on which boundary reference monument 513 is situated. The station is on a high and prominent hill covered with a dense growth of jack pine. It may be reached from the head of the little bay north of reference monument 513, where a blazed trail leads to the station.

Station mark: A bronze disk marked "U. S. & C. B. S." set in solid rock. The reference mark is a Geodetic Survey of Canada bronze disk set in solid rock 12.69 meters from the station in azimuth 350° 49'.

Loon (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1924).—About 2 miles northeast of the head of the extreme northeast bay of Loon Lake, about one-half mile southeast of Steep Lake and about three-fourths mile west of Eugene Lake. The station is on a high hill covered with a dense growth of small jack pine. The station may be reached from the head of the extreme northeast bay of Loon Lake by a very narrow opening which leads into a lake extending a mile north. From the north end of this lake and just west of a cedar swamp a blazed trail leads northeast, crosses Slim Lake on fallen trees, and continues eastward to the station.

Station mark: A standard United States Coast and Geodetic Survey station mark disk set in solid rock. A standard United States Coast and Geodetic Survey reference mark disk set in solid rock is 5.15 meters from the station in azimuth 265° 24'.

**Burnt** (Ontario, Rainy River District; J. J. McArthur, 1915; U. S. Coast and Geodetic Survey, 1924).— On the north side of Lac La Croix, about three-fourths mile northwest of the northwest corner of the Bay of Lac La Croix just north of the solitary dome-shaped island in the middle of the lake and about 5 miles northwest of Andrew Williams' trading post. The station is on the summit of the very conspicuous, high, burnt ridge that extends along the northwest shore of Lac La Croix and between it and Thompson Lake.

Station mark: A bronze disk marked "U. S. & C. B. S." set in a solid bowlder. A standard United States Coast and Geodetic Survey reference mark disk with the arrow pointing toward the station is wedged in a drill hole in outcropping sandstone 9.15 meters from the station in azimuth 334° 30′.

**Granite** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1924).—On the south side of Lac La Croix, about 1½ miles south of the shallow bay at the southwest corner of the main body of the lake and due south of the large island shown on the boundary maps as Twentyseven Island. The station is on a high timbered ridge.

Station mark: A bronze disk set in solid rock. A bronze disk is set in solid rock 13.04 meters from the station in azimuth  $230^{\circ}$  49'.

**Timber** (Minnesota, St. Louis County; U. S. Coast and Geodetic Survey, 1924).—On the south side of Lac La Croix, about 5 miles south of Coleman Island and 5 miles west of Bottle Portage. The station is on a very high hill covered with white pines 100 feet tall and is about 1¼ miles west of south of the head of the long narrow arm of Lac La Croix which extends south from the western part of Coleman Island.

Station mark: A bronze disk set in the top of a rock about 10 by 20 feet and 6 feet above the general ground surface. The reference mark is a bronze disk set in solid rock 6 feet below and 18.20 meters from the station in azimuth  $247^{\circ}$  14'.

Cedar (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1924.)—On Lac La Croix, on a small low island at the eastern end of the main body of open water. The island lies about 1¼ miles east of boundary reference monument 551, which is on a very small island in the open lake and conspicuous by its lone bushytopped pine tree. The island on which the station is located is covered with tall Norway pine, white pine, and cedar. The station is near the western extremity of the island and about 15 meters from the shore. The reference mark is near the water level at the most western point of the island.

Station mark: A bronze disk marked "G. S. of C." set in a rock ledge about 1 foot below the ground level. The hole is walled up with rock to the ground level. A bronze disk set in a solid rock ledge near the shore is 24.13 meters from the station in azimuth 58° 10'.

Shortiss (Ontario, Rainy River District; J. J. McArthur, 1915; U. S. Coast and Geodetic Survey, 1924).— On the highest point of Shortiss Island in the southeastern part of Lac La Croix. The station is about 3 miles northeast of Bottle Portage and 1 mile northeast of Bass Lake. The location of the station is made conspicuous by the tall grove of Norway pines on the summit of the hill.

Station mark: A bronze disk marked "U. S. & C. B. S." set in a small bowlder found in place flush with the ground. The reference mark is a Geodetic Survey of Canada bronze disk set in a small bowlder about 6 inches above the ground and 24.29 meters from the station in azimuth 22° 16'.

Falls (Minnesota, St. Louis County; J. J. McArthur 1915; U. S. Coast and Geodetic Survey, 1924).— About 1½ miles east of south from the mouth of Beartrap River discharging into Iron Lake and about one-half mile southeast of the head of a slough leading south from Beartrap River about one-half mile above its mouth. The station is on a low hill covered with a dense growth of small jack pine and spruce.

Station mark: A bronze disk marked "U. S. & C. B. S." set in solid rock. A United States Coast and Geodetic Survey bronze disk set in solid rock is 12.27 meters from the station in azimuth 233° 43'.

Lister (Minnesota, St. Louis County; W. B. Fairfield, 1915; U. S. Coast and Geodetic Survey, 1924).— About 3¾ miles due south of Curtain Falls and about three-fourths mile southwest of the head of the narrow bay which is the southwest extremity of Crooked Lake. The station is on a flat-topped thickly timbered hill.

Station mark: A drill hole within a triangle cut in solid rock. In 1924 a United States Coast and Geodetic Survey disk was placed in the hole and a bronze disk was set in solid rock 22.84 meters from the station in azimuth 181° 23'.

Ark (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1924).—About 2 miles northwest of the most northern extremity of Gardner Bay of Crooked Lake and one-half mile west of Elk Lake. The station is on a high burned-over hill conspicuous by the dense stand of large white-pine snags on it. It is on the divide between Elk and Trout Lakes. The station is reached from Crooked Lake via the deep bay extending north, just west of the rapids, to the entrance into Gardner Bay; thence to the southwest corner of the northwest bay of Gardner Bay, where a portage leads into a small beaver-dam lake; thence across this lake to a portage which leads to another beaver dam; thence continue up a narrow channel through floating bog to a short portage into Elk Lake; thence go to the head of the first little bay on the west side of Elk Lake and about three-fourths mile from the portage. From this point a trail has been cut and blazed to the station.

Station mark: A Geodetic Survey of Canada bronze disk set in solid rock. The reference mark is a United States Coast and Geodetic Survey bronze disk set in solid rock 15.03 meters from the station in azimuth 21° 59′.

**Hargo** (Minnesota, Lake County; W. B. Fairfield, 1914; U. S. Coast and Geodetic Survey, 1924).—On the south side of Crooked Lake and on the west side of the most eastern large southern arm of the large irregular portion of the lake. The station is 1½ miles southwest across the lake from the south end of the narrow boundary channel, with rapids in it, that passes around the north and west sides of a large island and connects the upper and lower levels of the lake. It is about 400 meters west of the lake shore and about 75 meters above the level of the lake on the summit of a steep rounded hill covered with young pines.

Station mark: A bronze disk marked "U. S. C. & G. S." set in solid rock, with a triangle cut in the rock around the disk. A bronze disk set in solid rock is 16.60 meters from the station in azimuth 231° 59'.

Glint (Ontario, Rainy River District; W. B. Fairfield, 1914; U. S. Coast and Geodetic Survey, 1924).—The station may be reached from Crooked Lake by leaving the lake at the head of Moose Bay, traveling with canoe, following a portage along the stream that connects Robinson Lake with the head of the bay, thence by the stream, portaging at the three rapids in the stream, until Robinson Lake is reached. From this point the station can be seen on the top of a very high and prominent hill. The top of the hill has been cleared of trees.

Station mark: A bronze disk marked "G. S. of C." set in solid rock, with a triangle cut in the rock around the disk. A reference mark, a bronze disk marked "U. S. C. & G. S.," is set in solid rock 12.65 meters from the station in azimuth 268° 21'.

**Beaver** (Ontario, Rainy River District; U. S. Coast and Geodetic Survey, 1924).—On the north side of Basswood Lake about 1 mile north of the head of North Bay and about one-half mile northwest of an inland lake. The station is on the summit of a rocky burned-over ridge. It may be reached by a one-half-mile portage from North Bay to the inland lake. A blazed and cut-out trail leads from a bay in the north shore of the inland lake just west of the narrows at the west end of the main body of water. It can be reached by shorter portages from the arm of Basswood Lake, east of North Bay, by keeping the northwest shore to a narrows opening into a lake, thence across this lake to a portage at the mouth of a small creek. Follow the portage to a beaver dam and continue up a slough to another short portage. This leads into the inland lake above mentioned; thence this route is the same as by the first route.

Station mark: A Geodetic Survey of Canada bronze disk set in solid rock. An arrow pointing toward the station is cut in solid rock 8.17 meters from the station in azimuth 248° 21'; a second arrow is cut in the solid rock 8.69 meters from the station in azimuth 338° 44'.

Rock (Minnesota, Lake County; U. S. Coast and Geodetic Survey, 1924).—South of Basswood Lake, about 2½ miles southeast of Upper Basswood Falls and about 1¼ miles east of the entrance to Jackfish Bay and the Pipestone Falls branch of Basswood Lake. The station is on the highest point and near the southwest end of the highest hill on United States Point and may be identified from the west by the steep, smooth, rock bluff on its west side and the thin growth of tall Norway pines on its summit. It is about one-half mile back from the shore line to the west and may best be approached from the west.

Station mark: A bronze disk set in solid rock. A bronze reference mark disk is set in solid rock 8.9 meters from the station in azimuth 220° magnetic. A nail in the center of a triangle blazed on a Norway pine tree is 14.71 meters from the station in azimuth 29° 45'.

Canada (Ontario, Rainy River District; Geodetic Survey of Canada, 1917; U. S. Coast and Geodetic Survey, 1924).—On Basswood Lake on the peninsula known as Canadian Point. The station is on the highest hill on the point and is about 2 miles east of the channel connecting the western and middle bodies of the lake. Vistas cut through the extremely heavy timber converge at the station.

Station mark: A copper bolt stamped "G. S. C." and set flush in solid rock. Three copper bolts set flush in outcropping bowlders reference the station mark at the following azimuths and distances: Reference mark No. 1, 19.90 meters in azimuth 346° 59'; reference mark No. 2 (distance not measured) in azimuth 99° 17'; reference mark No. 3, 18.09 meters in azimuth 232° 05'.

Found (Minnesota, Lake County; W. B. Fairfield, 1914; U. S. Coast and Geodetic Survey, 1924) .- About 3 miles south of Basswood Lake, about 1 mile northwest of New Found Lake, and about 1 mile east of Wind Lake. The station is on the summit of a high, bare, rock hill south of a burn. The station is best approached from the northeast end of Wind Lake, following the bare rocks eastward from there to the station.

Station mark: A copper bolt within a triangle cut in the rock. A copper bolt set in solid rock is 8.16 meters from the station in azimuth 340° 17', and a copper bolt is set in solid rock 12.92 meters from the station in azimuth 90° 39'.

Emily (Ontario, Rainy River District; W. B. Fairfield, 1914; 1924).-On the north shore of Basswood Lake, on the south end of the point between Merriam and Bayley Bays. The station is on the highest point of the rocks, about 100 meters back from the shore line and about 30 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Fang (Minnesota, Lake County; W. B. Fairfield, 1913; Geodetic Survey of Canada, 1915).-On the southeast side of Sucker Lake, on the high, bare, rock hill about 700 meters south of the dam at the west end of Iron Mountain (Ensign) Lake. The hill or ridge is a series of white granite ledges, one above the other. It is the highest in the vicinity and commands an extensive view in all directions.

Station mark: A drill hole within a triangle cut in the solid ledge of the summit.

Gone (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On the north side near the east end of Basswood Lake. The station is on the prominent peninsula that lies on the west side of the most northeastern small bay of the northern shore of Bayley Bay. It is on a flat rock well up on the southern point of the eastern ridge of the peninsula. There is a small island lying about 125 meters offshore south of the station.

Station mark: A drill hole within a triangle cut in the rock.

Had (Minnesota, Lake County; W. B. Fairfield, 1913; Geodetic Survey of Canada, 1915).-On the Minnesota shore of Basswood Lake south of the peninsula that lies between Merriam and Bayley Bays. The station is on a wooded point about 1 mile west of Rice Bay and three-fourths mile west of reference monument 823. It is on a large bowlder about 3 meters from the water's edge. About 10 meters back from the station the point is higher, rocky, and wooded.

Station mark: A bronze disk set in the rock.

Garb (Ontario, Rainy River District; W. B. Fairfield, 1913; Geodetic Survey of Canada, 1915) .-- On the Canadian side of Basswood Lake, on the east shore of Bayley Bay. The station is one-third mile north of the wooded island on which reference monument 825 is situated. It is near the middle of a flat rock about 10 feet square that projects into the lake and is about 1 foot above the level of the lake.

Station mark: A bronze disk set in the rock.

Sunday (Ontario, Rainy River District; Geodetic Survey of Canada, 1916).-On a hill about 2 miles northwest of the northeast bay of Sunday Lake. A trail from the northwest corner of this bay leads to the station. The hill is a "hogs back" running in a northeasterly direction and the station is at the southwest end.

Station mark: A copper bolt stamped "G. S. C. 1916." Three reference bolts are placed as follows: No. 1, azimuth 1° 05', distance 7.73 meters; No. 2, azimuth 112° 35', distance 8.93 meters; No. 3, azimuth 248° 50', distance 14.87 meters.

Paddy (Ontario, Rainy River District; Geodetic Survey of Canada, 1915; 1917).-On the north side of Knife Lake opposite the mouth of the big southern arm of the lake. The station is on the top of a high timbered hill about 400 meters back from the shore of the small bay on the south side of which reference monument 894 is situated.

Station mark: A copper bolt set in a drill hole within a triangle cut in rock.

Ewing (Minnesota, Lake County; Geodetic Survey of Canada, 1915) .- About 2 miles southwest of the west end of Cacaquabic Lake. The station is on a hill, about one-fourth mile from a wagon road and about threefourths mile from an abandoned lumber camp.

Station mark: A copper bolt set in rock.

Trouble (Ontario, Rainy River District; Geodetic Survey of Canada, 1916) .- This station is on a burntover hill about 2 miles from the northeast corner of Louisa Lake, from which it is best reached.

Station mark: A copper bolt stamped "G. S. C. 1916."

Saunders (Minnesota, Lake County; Geodetic Survey of Canada, 1916).—On a hill on the south side of the long narrow arm of Knife Lake, at the entrance of which is the island on which reference monuments 895 and 898 are situated. The station is about 3 miles east of reference monument 898 and the hill, which can be seen from the water, is a flat oval with the long side east and west, and its south side slopes steeply down to a small lake.

Station mark: A copper bolt stamped "G. S. C. 1914," referenced by three copper bolts, placed as follows: No. 1, azimuth 255° 42', distance 23.90 meters; No. 2, azimuth 1° 21', distance 14.42 meters; No. 3, azimuth 118° 10', distance 17.74 meters.

**Dorothy** (Ontario, Rainy River District; Geodetic Survey of Canada, 1916).—On a prominent point 30 meters southwest of the highest part of the hill, a mile northeast of the bay in Cypress Lake north of the island on which reference monument 925 is situated. Reference monument 925 is about 2 miles northeast of the west end of Cypress Lake.

Station mark: A copper bolt stamped ''G. S. C. 1916" set in solid rock. Three reference bolts are placed as follows: No. 1, azimuth 140° 24', distance 5.29 meters; No. 2, azimuth 264° 48', distance 9.43 meters; No. 3, azimuth 1° 29', distance 6.04 meters.

**Poly** (Minnesota, Cook County; Geodetic Survey of Canada, 1916).—On the highest part of the hill, about three-fourth mile northeast of the north bay of Lake Gabbimichigama and about 2½ miles southwest of Seagull Lake south of Saganaga Lake.

Station mark: A copper bolt stamped "G. S. C. 1916" set in solid rock. There are three reference bolts: No. 1, azimuth 211° 46', distance 18.12 meters; No. 2, azimuth 282° 31', distance 18.03 meters; No. 3, azimuth 80° 38', distance 10.67 meters.

Helga (Minnesota, Cook County; Geodetic Survey of Canada, 1916).—On a high wooded hill on the south side of the west end of Saganaga Lake. About three-fourth mile south of the bay, south of reference monuments 952 and 954.

Station mark: A copper bolt stamped "G. S. C. 1916." There are no reference bolts, as the hill is covered with deep soil.

**Paulsen** (Minnesota, Cook County; Geodetic Survey of Canada, 1915; 1917).—On a prominent ridge lying in an east and west direction, about 10 minutes walk north from the buildings of the abandoned Paulsen Iron Mine. A 5-mile trail, following the right of way of the abandoned Port Arthur & Duluth Railway, leads from the west end of Gunflint Lake to the mine buildings.

Station mark: A copper bolt stamped ''G. S. C. 1915,'' set in solid rock (diabase) in the center of a triangle cut in the rock. Three reference bolts, also set in solid rock, are placed as follows: No. 1, azimuth 226° 01', distance 4.50 meters; No. 2, azimuth 358° 30', distance 7.01 meters; No. 3, azimuth 96° 50', distance 8.65 meters.

Mabel (Minnesota, Cook County; W. B. Fairfield, 1912; Geodetic Survey of Canada, 1916).—About 1½ miles west of the south end of Maraboeuf or Gneiss Lake and one-fourth mile east of the south end of the east arm of Saganaga Lake. The station is on the summit of a high, sharp, rocky point, the highest within several miles.

Station mark: A copper bolt stamped ''G. S. C. 1916'' set in solid rock. Three reference bolts are set as follows: No. 1, azimuth 216° 57', distance 16.06 meters; No. 2, azimuth 339° 06', distance 13.98 meters; No. 3 azimuth 111° 12', distance 17.02 meters.

Vera (Ontario, Rainy River District; W. B. Fairfield, 1912; Geodetic Survey of Canada, 1917).—On the north shore of Saganaga Lake 2½ miles northeast of the entrance to Cache Bay. The station is on the summit of a high rock cliff, about 175 meters back from the lake shore and about 50 meters above the level of the lake. This station was later occupied by the Geodetic Survey of Canada.

Station mark: A copper bolt stamped "G. S. C. 1916." Reference marks are set as follows: No. 1, azimuth 52° 11′, distance 12.40 meters; No. 2, azimuth 151° 42′, distance 14.62 meters; No. 3, azimuth 263° 29′, distance 10.14 meters; No. 4, which is on the boundary line between Rainy River and Thunder Bay Districts, azimuth 256° 18′, distance 71.61 meters.

Stuart (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1915).—In the center of a much dissected peninsula at the northeastern end of Saganaga Lake. The station is at the eastern end of a ridge which runs in a southeasterly direction. There is a distinct drop of about 175 feet to the east of the station into a swampy valley. A trail leads from the head of a marshy bay along the summit of a ridge in a southeasterly direction. Part of the ridge is timbered with jack pine, spruce, and a few birch and poplar, while the rest has been swept by fire. The trail is blazed through the timber.

Station mark: A copper bolt stamped 'G. S. C. 1915," set in a solid outcrop of gray granite. A triangle is inscribed in the rock about the bolt. Three reference bolts, also set in solid rock, are placed as follows: No. 1, azimuth 54° 55', distance 11.75 meters; No. 2, azimuth 186° 08', distance 4.60 meters; No. 3, azimuth 300° 25', distance 3.89 meters.

Light (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1915).—On a hill about 1½ miles southeast of the end of a large bay on Northern Light Lake, opposite the outlet of the lake. Northern Light Lake may be entered at its west end by the river which flows from it into Saganaga Lake. A trail enters the woods near a large rock outcrop and goes in a southeasterly direction to a high hill and thence in an easterly direction to the station. The hill on which the station is situated is timbered with jack pine and spruce and a few birch and poplar. Its western slope is steep, while the other slopes are gradual.

Station mark: A copper bolt stamped ''G. S. C. 1915,'' set in a solid outcrop of gray granite. Three reference bolts are placed as follows: No. 1, azimuth 182° 43', distance 7.24 meters; No. 2, azimuth 320° 59', distance 10.13 meters; No. 3, azimuth 61° 27', distance 9.78 meters.

John (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1915).—On a heavily wooded hill about 1 mile north of the northeast arm of Saganaga Lake. About 1½ miles from the northeast end of the lake, behind the more eastern of two large islands, a trail leads almost due north along a ravine and turns slightly to the west over higher ground onto the ridge where the station is located. The station is on a prominent rock outcrop.

Station mark: A copper bolt stamped ''G. S. C. 1915," set in solid rock, with a triangle inscribed around it. Three reference bolts are set as follows: No. 1, azimuth 282° 53', distance 12.54 meters; No. 2, azimuth 18° 29', distance 12.53 meters; No. 3, azimuth 130° 20', distance 15.17 meters.

Mowe (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1915).—On the summit of a heavily wooded flat ridge about 1 mile northwest of the northwest angle of Mowe Lake. Mowe Lake is about 2 miles northeast from the northeast angle of Saganaga Lake.

Station mark: A copper bolt stamped "G. S. C. 1915" set in solid rock. Three reference bolts are set as follows: No. 1, azimuth 11° 38', distance 12.07 meters; No. 2, azimuth 122° 46', distance 39.69 meters; No. 3, azimuth 228° 23', distance 12.67 meters.

**Gunflint** (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1915; 1917).—On the top of a ridge running north and south, covered with jack pines. The station is 2 miles from a small bay in the northwest angle of North Lake. From this bay a well-blazed trail leads to the station. The hill on which the station is situated is an abrupt rocky outcrop of granite with a small amount of soil on the surface. This hill drops off abruptly on the west side of the station at a distance of about 12 feet.

Station mark: A copper bolt stamped "G. S. C. 1915" set in solid rock in the center of a triangle cut in the rock. Three reference bolts also set in solid rock are placed as follows: No. 1, azimuth 189° 54', distance 8.15 meters; No. 2, azimuth 254° 39', distance 7.72 meters; No. 3, azimuth 43° 30', distance 7.99 meters.

Addie (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1914; 1917).—This station is on the summit of a wooded round-topped hill about three-fourths mile southeast of mile post 45 (1½ miles west of Addie Lake station) of the branch of the Canadian National Railway from Port Arthur to North Lake.

Station mark: A copper bolt stamped "G. S. C. 1914" set in solid rock, referenced by three copper bolts.

**Greenwater** (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1914).—This station is situated on a hill about 2 miles southwest of the southern arm of Greenwater Lake. It is best reached from Kashabowi on the Canadian National Railway.

Station mark: A copper bolt stamped "G. S. C. 1914," referenced by three copper bolts.

Echo (Ontario, Thunder Bay District, Geodetic Survey of Canada, 1913).—In Marks Township, reached by following the road about 6 miles northerly from Silver Mountain, on the branch of the Canadian National Railway from Port Arthur to North Lake. The station is in the woods and a small tower was built over it.

Station mark: A copper bolt stamped "G. S. C. 1913" set in solid rock about 10 inches below the surface, referenced by three copper bolts.

**Zero** (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1914).—Situated on a hill south of Zero Lake and west of Copper Lake. The top of the hill has been cleared. It is reached from Lake Shebandowan by following the trail shown on the English River sheet, published by the Department of the Interior of Canada. The trail leads from the south side of the lake.

Station mark: A copper bolt stamped "G. S. C. 1914" set in solid rock, referenced by three copper bolts.

Ware (Ontario, Thunder Bay District, Geodetic Survey of Canada, 1913).—On a hill in Ware Township, about  $4\frac{1}{2}$  miles east along the Dawson road from Kaministikwia on the Canadian Pacific Railway. The station is about three-fourths mile south of the road.

Station mark: A copper bolt stamped "G. S. C. 1913" set in solid rock. Three reference bolts are set as follows: No. 1, azimuth 119° 13', distance 11.34 meters; No. 2, azimuth 253° 31', distance 8.41 meters; No. 3, azimuth 356° 39', distance 10.45 meters.

Whitefish (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1912; 1917).—On a hill about 7½ miles south of Silver Mountain, on the branch line of the Canadian National Railway from Port Arthur to North Lake. To reach the station follow the road which follows the east side of Little Whitefish River for

about  $7\frac{1}{2}$  miles until it comes to the base of a rock bluff about 30 feet high close to the river. From here the magnetic bearing to the station is about  $245^{\circ}$  and the distance is about 2 miles.

Station mark: A copper bolt stamped "G. S. C. 1912" set in solid rock, referenced by three copper bolts.

**Devilfish** (Minnesota, Cook County; Geodetic Survey of Canada, 1913; 1918).—About 14 miles northwest of Hovland, Minn., in lot 31, township 64 north, range 3 east of the fourth principal meridian. On the summit of a high wooded hill, sloping gradually to the south and abruptly to the north, one-half mile south and 2 miles east of the east end of Devilfish Lake. It is reached by following the Flute Reed Valley tote road north from Hovland post office to a lumber camp near McFarland Lake; this road should be followed to where it most nearly approaches Devilfish Lake and from that point travel west to the lake.

Station mark: A copper bolt stamped "G. S. C. 1913" set in solid rock. Three reference bolts are placed as follows: No. 1, azimuth 334° 07', distance 3.07 meters; No. 2, azimuth 84° 41', distance 8.46 meters; No. 3, azimuth 207° 18', distance 3.83 meters.

**Pigeon** (Minnesota, Cook County; Geodetic Survey of Canada, 1911; 1918).—About 4 miles west of Grand Portage, Minn., and about 10 miles southwest of the mouth of Pigeon River. The station is on a low hill (the highest in this vicinity) which rises abruptly on the south and east and slopes gradually on the other sides, and is reached by following the "Cascade Trail" from Grand Portage for a distance of about 4 miles.

Station mark: A <sup>5</sup>/<sub>8</sub>-inch copper bolt stamped "G. S. C. 1911," referenced by three bolts.

**Farquhars Knob** (Minnesota, Cook County; U. S. Lake Survey, 1869; Geodetic Survey of Canada, 1911).— On a hill about 4 miles northwest of Hovland, Minn. The height of the ground at the station is 1,113 feet and the height of the tower used was 24 feet.

Station mark: A cross cut in solid rock about 3 feet below the surface of the ground. Above this cross is set a stone post.

Blake (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1913).—In the southwest corner of Blake Township, on the summit of the southern shoulder of the hill which rises abruptly from the west shore of Mud Lake. The northern part of the hill is quite precipitous. To reach the station follow the Pigeon River road south from Twin City Junction, near Fort William, about 25 miles.

Station mark: A copper bolt stamped "G. S. C. 1913" set in solid rock, referenced by three bolts as follows: No. 1, azimuth 255° 15', distance 12.71 meters; No. 2, azimuth 5° 54', distance 6.00 meters; No. 3, azimuth 142° 59', distance 8.75 meters.

McKay (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1912).—This station is on the highest point of Mount McKay, near Fort William, Ontario.

Station mark: A copper bolt stamped "G. S. C. 1912," referenced by three copper bolts.

**Macgregor** (Ontario, Thunder Bay District; Geodetic Survey of Canada, 1912).—In Macgregor Township, about 7 miles northwest of Mackenzie station on the Canadian Pacific Railway, on a rock outcrop on the highest part of a hill with slightly wooded sides. It is best reached by following the track westward to where a water pipe, covered by a dump of sand 10 feet high, joins the right of way; thence following the pipe  $1\frac{1}{4}$  miles to a dam, and from a place on the stream 100 meters west of the dam following a trail, about  $4\frac{1}{2}$  miles long, to the station.

Station mark: A copper bolt stamped "G. S. C. 1912," set in solid rock. Three reference bolts are set as follows: No. 1, azimuth 180° 29', distance 18.64 meters; No. 2, azimuth 322° 35', distance 14.37 meters; No. 3, azimuth 0° 29', distance 11.31 meters.

Isle Royal East (Michigan, Keweenaw County; U. S. Lake Survey, 1869; Geodetic Survey of Canada, 1911).—Situated near the east end of Isle Royal, about 1¼ miles north of the old mining company's landing in Rock Harbor. The height of the ground at the station is about 460 feet above the level of the lake and the height of the tower used was 34 feet.

Station mark: A copper bolt set in solid rock, referenced by a mark about 4 inches in diameter cut into a large bowlder. From this mark the station bearing is south  $18^{\circ}$  44' west, distance 2.23 meters. Thunder Cape Light bears north 55° 22' 40'' west.

NORTHWESTERNMOST POINT OF LAKE OF THE WOODS TO LAKE SUPERIOR, MAJOR SCHEME

**Buffalo** (Manitoba, Provencher District).—On the west side of Lake of the Woods at the high-water mark on Buffalo Point. This station has been destroyed.

Willow, 1913 (Minnesota, Roseau County.)—On a very narrow island in Lake of the Woods, 8 miles east of Warroad, Minn. This station has been destroyed.

Gull Island (Minnesota, Lake of the Woods County; C. H. Sinclair, 1913).—On the southern part of Lake of the Woods, on Cormorant Rock, which is a large rock in the lake, about  $3\frac{1}{2}$  miles west of Long Point, and about  $1\frac{1}{2}$  miles north of Rocky Point.

Station mark: A drill hole in the rock. Three other drill holes used for fastening signal guys are equally spaced about the station mark a few feet distant.

Gould (Manitoba, Provencher District; C. H. Sinclair, 1913).—On the west side of Lake of the Woods, about 1 mile south of the mouth of Reed River on the west shore of Buffalo Bay. The station is about 200 meters inland and is near the quarter post on the east line of section 18, township 2 north, range 17 east. The station is surrounded by heavy timber.

Station mark: A bronze disk marked "U. S. & C. B. S." set in concrete flush with the ground.

Long Point (Minnesota, Lake of the Woods County; C. H. Sinclair, 1913).—On the southern shore of Lake of the Woods, on Long Point, about 2 miles northwest of Lude, Minn. The station is on the rock ledge near the extreme end of the point.

Station mark: A bronze disk set in concrete in the rock.

Zippel (Minnesota, Lake of the Woods County; C. H. Sinclair, 1913).—On the south shore of Lake of the Woods, just east of the mouth of Zippel Creek. The station is the United States engineer's bench mark at Zippel, (Minn.), post office. It is also a transit point of the International Joint Commission. It is about 30 meters northwest of the store.

Station mark: A nail set in a lead plug in the top of a large bowlder.

**Big Point** (Ontario, Kenora District; J. J. McArthur, 1912).—On Big Island in Lake of the Woods, about 30 miles northeast of Warroad, Minn., and the same distance northwest of Rainy River, Ontario; on the northwest point of the small peninsula southwest of Sugar Point, on the highest part of the point. Reference monument 45 is on a small island about 600 feet northwest.

Station mark: A piece of drill steel 2 feet below surface.

Bigsby (Ontario, Kenora District; J. J. McArthur, 1912).—On Bigsby Island in Lake of the Woods, about 23 miles northwest of Rainy River, Ontario, and Baudette, Minn., 2½ miles east of The Three Sisters Islands; on the southwest end of the southwest point of the island.

Station mark: A piece of drill steel 2 feet below surface.

Hungry, 1917 (Ontario, Rainy River District; Jesse Hill, 1917).—At the mouth of Rainy River on the eastern bank about 1¾ miles south of Oak Point. The station is about 9 meters from the rise in the bank of the river, 100 meters southwest of some old buildings, and near the edge of the timber.

Station mark: A bronze disk set in a concrete base. A 45-foot tower was erected over the station.

Ben (Minnesota, Lake of the Woods County; J. J. McArthur, 1913; 1917).—About 1½ miles south of Four Mile Bay and the mouth of Bostick Creek. The station may be reached from a settler's house on Bostick Creek by going northeast on an old road, crossing one field. It is about one-half mile from the house to the station.

Station mark: A steel drill in the rock under a 12-foot scaffold.

Pitt (Minnesota, Lake of the Woods County; J. J. McArthur, 1913).—In section 23, township 161 north, range 32 west; about 500 feet from the north and 1,600 feet from the east boundaries; about 7 miles northwest of Baudette and 1¼ miles southwest of the school at the corner about a mile west of Wabanica Creek. This station has been destroyed.

Point (Ontario, Rainy River District; J. J. McArthur, 1913–14).—In the Wild Lands Reserve, section 51; on the right side of Rainy River, about 2½ miles northwest of the bridge between Baudette, Minn., and Rainy River, Ontario; close to the shore of the river just west of a small creek. Reference monument 77 is 206.5 meters west of the station.

Station mark: A bronze disk set in a square concrete base.

Rainy (Ontario, Rainy River District; C. H. Sinclair, 1913).—On the north shore of Rainy River about 1½ miles north of the mouth of Baudette River, and 1½ miles northwest of the town of Rainy River, Ontario. The station is on a gravel ridge about 450 meters west of a north-and-south road and 30 meters south of an east-and-west road in section 33, Atwood Township.

Station mark: A wooden stake. Subsurface mark is a bronze disk set in concrete 2 feet below the surface. A 55-foot tower was built over the station.

**Spooner** (Minnesota, Lake of the Woods County; C. H. Sinclair, 1913).—On the south side of Rainy River about 3 miles south of Spooner, Minn., and 1 mile east of Baudette River. The station is on the south side of the east-and-west road allowance between sections 14 and 23, township 160 north, range 31 west, and about 40 meters west of the north and south line between sections 23 and 24.

Station mark: No surface mark. Subsurface mark is a bronze disk set in a concrete block 2 feet below the surface of the ground. A 70-foot tower was erected over the station.

**Clementson** (Minnesota, Lake of the Woods County; C. H. Sinclair, 1913).—On the south side of Rainy River, about 425 meters east and a little south of the dam in Rapid River. The station is on a high isolated rock about 20 meters above the surface of Rainy River.

Station mark: A bronze disk set in concrete embedded in the rock. A 60-foot tower was erected over the station.

Sleeman (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River, about 4 miles north and one-half mile west of Sleeman Siding, Ontario. The station is on the northwest quarter of section 15, Blue Township, about 20 meters west of the center of the section and about one-fourth mile south of the north line. It is on a rock about 20 feet high.

Station mark: A bronze disk set in concrete embedded in the rock. A 70-foot tower was erected over the station.

**Pinewood** (Ontario, Rainy River District; C. H. Sinclair, 1913; 1925).—On the north side of Rainy River, about three-fourths mile northwest of Pinewood, Ontario. The station is on a rock about 45 meters above the surface of the river, in the northwest corner of section 27, Dilke Township.

Station mark: A bronze disk cemented in the rock.

**Darby** (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River, on section 27, Patullo Township. The station is on the higher of two prominent rocks known as Darby Rocks, just north of Pine River.

Station mark: A bronze disk cemented in a crack in the rock. A ½-inch drill hole one-half inch deep bears northeast by north 0.40 meter from the station. In 1921 the hole in which the disk was cemented was recovered, but the disk was reported gone.

Stratton (Ontario, Rainy River District; C. H. Sinclair, 1913; 1925).—On the north side of Rainy River, on the summit of a ridge about 1¼ miles north of Stratton, Ontario, and one-fourth mile west of a road. The station is in the northeast quarter of section 22, Morley Township. It is on a rocky mound on the south side of a lumber road running to the northwest.

Station mark: A bronze disk set in a rock 8 by 8 by 20 inches. A 45-foot tower was erected over the station.

**Partridge** (Ontario, Rainy River District; C. H. Sinclair, 1913).—On the north side of Rainy River, on the northwest quarter of section 29, Shenston Township. The station is on the highest point of the southeast part of a high rock ridge covered with scrub poplar and pine.

Station mark: A bronze disk cemented in a drill hole in the rock. A rock cairn, 5 feet in diameter and 5 feet high, was built 1.2 meters south of center of the station. The station mark was not found in 1921.

**Frontier** (Minnesota, Koochiching County; C. H. Sinclair, 1913).—On the west shore of Rainy River, near the Frontier (Minn.) school and in section 20, township 160 north, range 28 west. The station is about 200 meters west of the river, 40 meters south of the center of the east-and-west road, 80 meters west of the schoolhouse, and 50 meters west of the north and south section line. It is on high, level ground.

Station mark: A bronze disk set in a concrete base 9 by 9 by 20 inches. A 70-foot tower was erected over the station. The station mark was not recovered in 1921. The ground was cultivated, and no search was made below the surface of the ground.

Soo (Minnesota, Koochiching County; C. H. Sinclair, 1913; 1921).—About 1 mile south of Rainy River at Birchdale, Minn. The station is near the southeast corner of section 33, township 160 north, range 27 west, and is about 200 meters west of a north-and-south road, and 200 meters north of an east-and-west road. A 50-foot tower built by fire rangers is on a rock ridge about 150 meters south of the station.

Station mark: A bronze disk set in a concrete base 9 by 9 by 18 inches. A 75-foot tower was erected over the station.

Manitou (Minnesota, Koochiching County; C. H. Sinclair, 1913).—About 2½ miles south of Rainy River, on a high rock ridge near the south line of the south quarter of section 10, township 159 north, range 23 west. The station is on a crumbling rocky knoll about 80 meters east of the highest part of the ridge.

Station mark: A bronze disk cemented in the crumbling rock. A 40-foot tower was erected over the station. In 1921 the station mark was reported lost.

Tillet (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River, near the southwest corner of lot 7 of the third concession of Dobie Township, and just north of Indian Reservation No. 11. The station is on a rock called Tillets Rock which stands about 35 feet above the surrounding ground.

Station mark: A bronze disk cemented in a drill hole. A 40-foot tower was erected over the station.

Redford (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River in the northwest quarter of section 35, Aylsworth Township. The station is on William Redford's property about 150 meters south of his house. It is at a rise in a road and about 20 meters back from the east side of the road.

Station mark: A bronze disk set in a concrete base about 10 by 10 by 20 inches. A 75-foot tower was erected over the station.

**Cook** (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River, about 60 meters slightly south of east from the northwest corner of section 25, Lash Township. The station is on the highest point of a prominent rock, around which the section-line road detours.

Station mark: A bronze disk cemented in the rock. A 35-foot tower was erected over the station. In 1921 it was reported that the top of the mark had been broken off, leaving the shank still in place.

96030-31-33

Hill (Ontario, Rainy River District; C. H. Sinclair, 1913).—On the north side of Rainy River, near the southwest corner of the southeast quarter of section 33, Shenston Township. The station is on the highest point of a high rock on Mrs. Hill's property.

Station mark: A bronze disk cemented in the rock.

Indus (Minnesota, Koochiching County; C. H. Sinclair, 1913).—On the south side of Rainy River on the summit of a ridge about one-eighth mile south of the Indus (Minn.) store and post office.

Station mark: A bronze disk set in a concrete base about 10 by 10 by 18 inches. A 45-foot tower was erected over the station.

**Devlin** (Ontario, Rainy River District; C. H. Sinclair, 1913).—On the north side of Rainy River on a rock hill north of Devlin, Ontario, on the property of Mr. McDonald. The station is near the center of a slight depression at the summit of the rock hill.

Station mark: A bronze disk set in a concrete base. A 55-foot tower was erected over the station. In 1921 the station mark was reported lost.

**Daw** (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River, in the northwest quarter of section 33, Devlin Township. The station is on a high ridge about one-third mile east of the road between Devlin and Big Fork, and due east of Mr. Daw's house.

Station mark: A bronze disk set in a concrete block 2 feet below the surface of the ground. A 90-foot tower was erected over the station.

Fort Frances West Base (Ontario, Rainy River District; C. H. Sinclair, 1913; 1923).—About 5½ miles west of the Fort Frances (Ontario) railway station and about one-fourth mile west of the north-and-south road between sections 21 and 22, Crozier Township. The station is 54 meters south of the south rail of the Canadian National Railway.

Station mark: A bronze disk set in a concrete base 16 inches square and 2 feet deep. The subsurface mark is a United States and Canada Boundary Survey bronze bench-mark disk set in a concrete base 3 feet below the surface of the ground.

Johnson (Minnesota, Koochiching County; C. H. Sinclair, 1913; 1926).—About five-eighths mile south of Rainy River and about 7 miles southwest of International Falls, at a point where the river turns abruptly from south to west. The station is on the summit of a rise on J. K. Johnson's farm, and beside a trail leading south to the railroad station.

Station mark: A bronze bench-mark disk set in a concrete base 12 by 12 by 20 inches. An 85-foot tower was erected over the station.

Fort Frances East Base (Ontario, Rainy River District; C. H. Sinclair, 1913).—On the north side of Rainy River about one-third mile west of the Fort Frances railway station. The station is 54 meters south of the south rail of the Canadian National Railway in a grove of small spruce within the street limits paralleling the railway right of way.

Station mark: A bronze disk set in a concrete base 18 by 18 by 30 inches. Subsurface mark is a bronze benchmark disk set in a concrete block 3 feet below the surface of the ground. An 85-foot tower was erected over the station. In 1923 the surface mark was reported lost.

**Frog** (Ontario, Rainy River District; C. H. Sinclair, 1913; 1921).—On the north side of Rainy River, about 3 miles north and 1 mile west of Fort Frances, Ontario, and about one-half mile north of Frog Creek. The station is on a rock knoll on Napoleon Ducette's homestead about 170 meters southwest of his house.

Station mark: A bronze disk set in concrete in the sandy surface of the knoll. A 75-foot tower was erected over the station. In 1921 it was reported that the station mark was at the edge of a gravel pit and would probably soon be destroyed.

Squall Point (Ontario, Rainy River District; F. C. Warner, 1913).—On the north shore of Rainy Lake, about 2½ miles northeast of Ranier, Minn., on top of the small timbered hill on Squall Point. It is about 18 meters above the lake level, about 150 meters from the lake shore on the south, and about 260 meters on the east.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete base.

**Birch Point** (Minnesota, Koochiching County; F. C. Warner, 1913).—On the south shore of Rainy Lake, about 1½ miles east of Ranier, Minn., near the tip of Birch Point, a low timbered point. It is about 1 meter above the lake level, about 53 meters from the shore at the end of the point, about 23 meters from the west shore of the point, and about 53 meters from the east shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete base.

Lockhart (Ontario, Rainy River District; F. C. Warner, 1913).—On the north shore of Rainy Lake, about 6 miles northeast of Ranier, Minn., about one-half mile due north of the east end of Pukamo Island, and about three-fourths mile east of Lockhart's sawmill. It is about 33 meters above the lake level, about 260 meters from the point of the shore line to the southwest, and about 150 meters from the shore to the southeast.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Four iron bolts are set in the ledge at the following distances and directions from the station: 5.77 meters southwest, 4.44 meters southeast, 5.41 meters northeast, and 5.03 meters northwest.

Fransen (Minnesota, Koochiching County; F. C. Warner, 1913; 1921).—On Rainy Lake, about 4¾ miles east of Ranier, Minn., on the highest point of Victoria or Fransen Island. It is about 21 meters above the lake level, about 100 meters southeast of the north end of the island, and about 70 meters from the west shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Three iron bolts are set in the ledge at the following distances and directions from the station: 4.05 meters south, 5.15 meters west, and 4.51 meters north.

Island View (Minnesota, Koochiching County; F. C. Warner, 1913).—On the mainland on the south side of Rainy Lake, on the northeast side of a small hill about 2 miles west of the entrance to Black Bay. It is about one-half mile southwest of the head of the bay the entrance to which is just south of Grindstone Island. It is about 200 meters south of the winter road which runs from the head of the above bay to Tillson Bay, and is about 27 meters above the lake level. A native timber tower was erected at this point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Dunsmoore (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake, on the highest part of Dunsmoore Island, about 1¼ miles north of American Narrows. It is near the north end of the island at the site of a rustic observation tower, about 170 meters south of a summer cottage, about 130 meters from both the east and west shores of the island, and about 20 meters above the lake level.

Station mark: A 2-inch bronze disk set in the rock.

Lumber Camp (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake, near the center and on the highest ground of the northern peninsula of Sand Point Island, about one-half mile north of Goose Portage and the same distance north of an old lumber camp. It is in the timber, about 20 meters above the lake level, about 250 meters from the south shore, and about 400 meters from the east shore. A sawed-lumber tower was erected at the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete. The subsurface mark is a similar disk set in the rock. An iron bolt is set in ledge rock 2.32 meters northeast of the station.

**Bushyhead** (Minnesota, Koochiching County; F. C. Warner, 1913; 1921).—On the south shore of Rainy Lake, about 1 mile east of the entrance to Black Bay, about three-fourths mile southwest of Bushyhead Island. It is on the top of a rock ridge, about 24 meters above the lake level, and about 180 meters south of the lake shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Two iron bolts are set in ledge rock at the following distances and directions from the station: 6.90 meters north and 5.30 meters west.

Sand Point (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake on the highest point of Sand Point Island; about one-half mile northwest of the site of the old trading post, which is on a low point on the south shore; and about 300 meters northeast of the head of a small bay the mouth of which is about three-fourths mile northeast of Capstan Rock. The station is on the top of a cliff about 45 meters above the lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Berry (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake, on Berry Island, a long, irregularly shaped island on the south side of Swell Bay, the second large island east of Sand Point Island, and one-half mile west of Little Rocky Narrows. It is on a cleared area on the east end and the highest point of the island, about 27 meters above the lake level, about 120 meters from the south shore, and about 480 meters from the east end of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Two iron bolts are set in ledge rock at the following distances and directions from the station: 6.90 meters north and 5.36 meters west.

**Cranberry** (Minnesota, St. Louis County; F. C. Warner, 1913; 1921).—On Rainy Lake, on Cranberry Island, a high-timbered island about 5 miles east of the entrance to Black Bay and about 1 mile northwest of the entrance to Cranberry Bay. It is about 14 meters above the lake level, about 30 meters south of the north shore of the island, and about 140 meters from the northeast end of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron bolt is set in the ledge at a distance of 5.7 meters in azimuth 40° 55' from the station.

Lost (Minnesota, St. Louis County; F. C. Warner, 1913; 1921).—On Rainy Lake, on the south side of Lost Bay about 1 mile east of the entrance. It is on the summit of a knoll about 12 meters above the level of the lake and about 150 meters southeast of the first small bay on the south shore east of the entrance to Lost Bay. A native-timber tower was erected at the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Two iron bolts are set in the ledge at the following distances and directions from the station: 7.14 meters northwest and 4.40 meters a little south of west.

Baldy (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake, on the south side of the entrance to Seine Bay, near the highest point of a high, bald, barren island. It is near the center of the island and about 18 meters above the lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Three iron bolts are set in the ledge at the following distances and directions from the station: 5.90 meters east, 6.55 meters north, and 5.95 meters west. Reference monument 283 is set in the same ledge 0.43 meter distant.

Swell (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake, on the north side of Swell Bay, about 5 miles northeast of Sand Point Island and about three-fourths mile east of Bears Passage. It is on the highest part of a high, timbered, rocky hill about 45 meters above the level of the lake, about 270 meters northeast of the water's edge at the head of a small bay, and about 240 meters northwest of the northwest shore of Shelter Cove.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Scott (Ontario, Rainy River District; F. C. Warner, 1913).—On Rainy Lake, on the largest island of the group south of the entrance to Seine Bay. It is on the eastern part of the island south of the western part of Scott Island, in a grove of tall jack pines. It is on the highest point of the island, about 30 meters above the level of the lake, about 120 meters from the north shore of the island, and about 180 meters southwest of a small bay in the entrance to which there is a small island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in bare ledge rock.

Saginaw (Minnesota, St. Louis County; F. C. Warner, 1913).—On Rainy Lake, on the south shore of Saginaw Bay, on the northeast extremity of a prominent peninsula about one-half mile west of Finlander Bay and Finlander Island. It is about 13 meters above the lake level, about 60 meters south of the north shore of the peninsula, and about 160 meters west of the east shore. A native-timber tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. S." set in ledge rock and surrounded by trees. Two iron bolts are set in the ledge at the following distances and directions from the station: 4.90 meters northeast and 4.71 meters southeast.

Brule (Ontario, Rainy River District; F. C. Warner, 1913; 1921).—On Rainy Lake, about three-fourths mile northeast of the eastern entrance to Brule Narrows, and about 120 meters north of the lake shore at the east end of the north or canoe channel which parallels Brule Narrows. It is about 6 meters above the lake level. A native-timber tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

**Big Island** (Minnesota, St. Louis County; F. C. Warner, 1913).—On Rainy Lake near the highest point of Big Island, about 4 miles southeast of the eastern entrance to Brule Narrows. It is about 27 meters above the lake level and is about 150 meters southwest of the head of a small bay which is on the north shore of the island On Emerald Island in this bay is a summer home belonging to T. J. Lenander. A native-timber tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Two iron bolts are set in the ledge at the following distances and directions from the station: 5.65 meters west and 5.44 meters south.

Manitowoc (Ontario, Rainy River District; Jesse Hill, 1914; 1925).—On Rainy Lake, about 4 miles east of the eastern entrance to Brule Narrows, on an island covered with scattered timber, the most northern of a group of four islands. It is on the highest part of the southeastern part of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Two iron bolts are set in the ledge, one 5.02 meters north of the station, the other 6.13 meters west.

**Duck** (Minnesota, St. Louis County; Jesse Hill, 1914).—On Rainy Lake, about 6 miles east of the eastern entrance to Brule Narrows, and about 180 meters south of the head of Duck Bay, an indentation in the south shore of Rainy Lake due south of Manitou Rock and Anchor Island. There is a small timbered island at the middle of the entrance to Duck Bay and a small island at the west side of the entrance. The station is on a rocky ridge, about 31 meters above the lake level, sloping toward the bay.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete in a nail keg with small rocks piled around it. An iron reference bolt is set 8.06 meters east and a second bolt is set 6.05 meters north of the station.

Whitewash (Ontario, Rainy River District; Jesse Hill, 1914; 1925).—On Rainy Lake, about 6 miles east of the eastern entrance to Brule Narrows, on a rocky island covered with loose bowlders, the northeast island of a group of three called Gull Rocks which are near the middle of the lake. The station is on the north side of the island a little above the average lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. Four reference bolts are set as follows: 5.62 meters south, 7.89 meters west, 3.39 meters north, and 5.33 meters east of the station.

**Brown** (Minnesota, St. Louis County; Jesse Hill, 1914).—On Rainy Lake, about 6½ miles east of the eastern end of Brule Narrows, on the high rocky ridge just west of Browns Bay. It is about 40 meters above the lake level and about 180 meters south of the lake shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete. An iron reference bolt is set 4.52 meters north and a second bolt is set 6.08 meters west of the station.

Lake (Minnesota, St. Louis County; Jesse Hill, 1914).—Between Rainy Lake and Namakan Lake, on the northeast end of a high, rocky jack-pine ridge about 1¾ miles south of the south shore of Rainy Lake and about one-half mile west of Mica Bay, an arm of Lake Namakan. It is about 200 meters southwest of the shore of a small inland lake and about 100 meters south of a small creek which flows east.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is set 5.21 meters south and a second bolt is set 8.47 meters west of the station.

**Boundary.** (See first-order station "Late.")

**Moose** (Minnesota, St. Louis County; Jesse Hill, 1914; 1921).—Between Rainy Lake and Namakan Lake about 3¾ miles west of Kettle Falls, about 1 mile south of the shore line of Rainy Lake, and about 500 meters northeast of the head of the largest cove near the middle of the north side of Mica Bay. It is on a high jack-pine ridge. A 75-foot tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is set 5.71 meters northeast and a second bolt is set 6.70 meters west northwest of the station.

Sand Narrows (Minnesota, St. Louis County; Jesse Hill, 1914).—On Rainy Lake, about 2 miles northwest of Kettle Falls, on the southeast side of the bay which is south of Sand Narrows and Smith Island. It is on a high rocky ridge about 15 meters above the lake level and about 70 meters from shore. A 50-foot tower was erected over the station and the path to the station is indicated by the bare place on the ledge where the tower legs were hauled up. The reef across this arm of the bay can be crossed about two-thirds of the distance from the west end.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is set 4.94 meters north of the station and a second bolt is set 6.54 meters west.

**Bear** (Ontario, Rainy River District; Jeses Hill, 1914).—Between Rainy Lake and Namakan Lake, about 1½ miles east of Kettle Falls near the top of a ridge on the point of land which lies between the south end of the Canadian Channel and the entrance to Hale Bay. The station is among tall pines, about 26 meters above the lake level, about 240 meters east of the shore of the Canadian channel, and about 320 meters north of the shore of Hale Bay. A 70-foot tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete in a nail keg and partly buried in the earth. An iron reference bolt is set 6.67 meters south, and a second bolt is set 7.97 meters east-northeast of the station.

Snow (Ontario, Rainy River District; Jesse Hill, 1914).—On Namakan Lake, about 2½ miles south of Kettle Falls, about three-fourths mile northwest of Blackstone Island, and about 1¼ miles north of Randolph Island. It is about 220 meters from the shore on the east side of the point and about 270 meters from the south shore. A 65-foot tower was constructed here.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is 6.10 meters east, and a second bolt is 14.63 meters south of the station.

Squaw (Minnesota, St. Louis County; Jesse Hill, 1914).—On Namakan Lake, about 6 miles southwest of Kettle Falls and about three-fourths mile north of the bay which leads west from Lake Namakan to Lake Kabetogama. It is on a high, flat, timbered, rocky ridge and is reached from the second small bay west of a fisherman's house. A 25-foot tower was constructed, using the butt of a tree for an instrument stand. The station is about 10 meters east of the tower.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is 12.23 meters east and a second bolt is 18.46 meters south of the station.

Namakan (Minnesota, St. Louis County; Jesse Hill, 1914; 1925).—On Namakan Lake, about 6 miles southeast of Kettle Falls, about 1¾ miles southeast of Blackstone Island, on the highest point of an island near the south shore of the lake and opposite the entrance to a deep bay. The island is the largest of a group and can be identified by its high rock face and the dark timber which covers it.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is 7.88 meters north, and a second iron bolt is 5.51 meters east of the station. Reference monument 356 is 0.11 meter southeast of the station.

**Bump** (Ontario, Rainy River District; Jesse Hill, 1914).—Near Namakan Lake, about 5 miles east of Kettle Falls, and about 1½ miles east of the east end of Hale Bay. It is on the south side of the top of a dome-shaped

hill, the first one east of Hale Bay, and is on the north side of the eastern of two small lakes. It is reached by following a logging road from the east end of Hale Bay.

Station mark: A hole, 1 inch in diameter and 3 inches deep, drilled in a granite ledge. Four iron reference bolts are set as follows: 3.74 meters southeast, 3.05 meters southwest, 3.61 meters northwest, and 2.89 meters northeast of the station.

Bay (Minnesota, St. Louis County; Jesse Hill, 1914).-Between Namakan and Sand Point Lakes, on a high, rocky ridge southwest of Namakan Narrows, about 1 mile south of the south shore of Namakan Lake and about 1 mile west of the bay at the northwest corner of Sand Point Lake, from which a trail leads to the station. The ridge is covered with small pine. A 30-foot tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is 7.47 meters east and a second bolt is 7.25 meters north of the station.

Tower (Ontario, Rainy River District; Jesse Hill, 1914; 1924).-On the north shore of Namakan Lake on a very conspicuous high, rocky, timbered point, due north of Namakan Narrows and about three-fourths mile from the lake shore. A trail leads from a little bay at the mouth of a small creek north to the station which is on the southwest shoulder of the ridge. A 30-foot tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in cement and rock. An iron reference bolt is 9.12 meters east, and a second bolt is 5.60 meters south of the station. The United States Coast and Geodetic Survey station "Tower" was established about 50 meters northeast by north of the station in 1923 and marked with their standard station mark and reference mark disks.

Center I (Ontario, Rainy River District; J. J. McArthur, 1914) .- About one-half mile northwest of the small island in the little bay of David Lake that is 1 mile northeast of the western end of the narrows which connect David Lake with Clearwater Lake, an arm of Sand Point Lake. David Lake is about 3 miles east of reference monument 381.

Station mark: A bronze disk set in a drill hole in rock in place.

La Croix (Minnesota, St. Louis County; J. J. McArthur, 1915).—One-third mile south of the swampy shore of the narrows at the southeast corner of the bay of Lac La Croix just south of the west bend of the lake. Reference monument 512 is on a small island near the south side of the entrance to the bay.

Station mark: A bronze disk set in a drill hole in rock in place.

Ely (Minnesota, St. Louis County; J. J. McArthur, 1915).-Two-thirds mile south of the mouth of the creek at the south shore of the bay in Lac La Croix, 1 mile south of the large island due south of the entrance to Namakan River. The creek is  $1\frac{1}{4}$  miles southeast of the narrows between the island and the southern mainland, one-eighth mile south of the most southern island in the bay; a large stretch of open water lies to the northeast.

Station mark: A bronze disk cemented in a drill hole in rock in place. The point is referenced by two bronze disks, cemented in the rock, one east, 17.39 meters, and the other northwest, 20.22 meters; the distance between the reference disks is 31.27 meters.

Village (Ontario, Rainy River District; J. J. McArthur, 1915).-One-half mile north of the north shore of Lac La Croix and one-half mile east of Namakan River. Reference monument 548 is a little over one-half mile southeast.

Station mark: A bronze disk set in a drill hole in rock in place.

Winton (Minnesota, St. Louis County; J. J. McArthur, 1915).—On the highest part of the ridge 1<sup>1</sup>/<sub>2</sub> miles west of the west shore of Lac La Croix at the entrance to the bay leading to Agnes River, at the southwest corner of the east bend of the lake. There is an island one-fourth mile long which lies in a north and south direction at the mouth of this bay and Bottle River lies about 2 miles east.

Station mark: A bronze disk set in a drill hole in rock in place.

Center III (Minnesota, St. Louis County, J. J. McArthur, 1915) .-- On the northeast side of the highest hill on the west side of Iron Lake, one-fourth mile from the shore of the lake where a small bay projects northerly into the mainland. Reference monument 638 is about one-third mile due east of the bay. Station mark: A bronze disk set in drill hole in rock in place.

Curtain II (Ontario, Rainy River District; J. J. McArthur, 1916).-On the rocky ridge which runs parallel to the shore of the northwest corner of Crooked Lake. The station is two or three hundred meters from the shore. It may also be reached from Iron Lake, from the bay on the north side of the mouth of Curtain River, the trail running northeasterly for about a mile to the station. "Curtain" triangulation station is about half a mile south of Curtain II.

Station mark: A bronze disk cemented in a drill hole in rock in place; the point is referenced by two bronze disks, one 11.40 meters east and the other 10.21 meters south; the reference disks are 15.03 meters apart.

Curtain (Ontario, Rainy River District; W. B. Fairfield, 1915).-On the west side of Crooked Lake about 650 meters northeast of Curtain Falls. The station is on top of a heavily timbered ridge about 200 meters west of the shore line of a small bay.

Station mark: A bronze disk set in rock.

Mutt (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On the north side near the west end of Crooked Lake. The station is on the heavily timbered isolated hill on the point at the bend of the lake about 2<sup>3</sup>/<sub>4</sub> miles southeast of Curtain Falls. There is a Canadian forest ranger's cabin on the slope between the station and the shore.

Station mark: A drill hole within a triangle cut in the rock. A bronze disk set in rock marking triangulation station "Knit" is on the point of the shore at the foot of the hill about 100 meters southwest of the station.

Jeff (Minnesota, St. Louis County; W. B. Fairfield, 1915) .- On the south side, near the west end of Crooked Lake. The station is about 600 meters east-southeast from the head of the narrow bay of the southwest extremity of Crooked Lake. It is on the summit of a high rocky-topped hill.

Station mark: A drill hole within a triangle cut in the rock.

Gape (Ontario, Rainy River District; W. B. Fairfield, 1914; 1924).-On the north side of Crooked Lake, near the middle of the large irregular portion of the lake. The station is about one-half mile north of the north arm of the lake from which the narrow passage leads to Gardner Bay and about 1 mile west-northwest of the mouth of this narow passage. It is on a high bare hill, the highest in the vicinity, that rises steeply from the west shore of a small lake.

Station mark: A drill hole within a triangle cut in the rock.

Gorge (Ontario, Rainy River District; W. B. Fairfield, 1914).-On the north side of Crooked Lake about 7 miles north of Lower Basswood Falls. The station is on a high hill about 250 meters west of the north end of the large bay or inlet that extends north from the second and last long narrow north-and-south reach of the eastern part of the lake. A narrow inlet about 2 miles long extends southeast from Gardner Bay and heads against the foot of the hill on the west side of the station. The station is on the bare pinnacle of the hill. Station mark: A drill hole within a triangle cut in the rock.

Fave (Minnesota, Lake County; W. B. Fairfield, 1914).-About 3¼ miles north-northwest, air line, from Lower Basswood Falls. To reach the station, go north from Lower Basswood Falls via Crooked Lake for 4½ miles, thence follow the turn of the lake to the west about 1 mile, thence south one-half mile to the head of the large bay, near the southwest angle of which will be found a portage going south to Jackfish Lake; follow the portage about three-eighths mile, or nearly to Jackfish Lake, then turn to the right on a blazed trail up the hill three-eighths mile to the station. The station is on top of the hill among the young pines. Lines were cleared toward other stations.

Station mark: A drill hole within a triangle cut in the bare rock.

Flag (Minnesota, Lake County; W. B. Fairfield, 1914; 1924).-About 11/8 miles due north of Lower Basswood Falls, and about 600 meters west of Crooked Lake. The station is on a large rock about 3 meters higher than the surrounding ground. Lines were cut toward adjacent stations.

Station mark: A drill hole within a triangle cut in the rock.

German (Ontario, Rainy River District; W. B. Fairfield, 1914) .- About 3% miles northeast, on an air line, from Lower Basswood Falls and about 15% miles east of Moose Bay of Crooked Lake. The station is on a high bare point near a small lake. The station may be reached by leaving the head of Moose Bay by canoe, following the stream to Robinson Lake, portaging where necessary on account of rapids, thence via the portage which leaves Robinson Lake to the east of the creek which drains a small lake with a red bottom. Cross this small lake to a point at the left of a swamp, where there is a blazed trail along a small creek to another small lake; cross this last lake to another creek which is steep and bowlder-strewn, and dry at times; follow this creek to a bay in another lake, go around the right end of this last lake, which is long and narrow, to the highest bare point in sight, on which the station is located.

Station mark: A drill hole within a triangle.

Gosh (Ontario, Rainy River District; W. B. Fairfield, 1914) .- Three miles north of Basswood Lake and 5½ miles east of Crooked Lake. The station is reached by leaving the head of Moose Bay in Crooked Lake, taking a portage and a rapid stream to Robinson Lake, traveling with canoe; thence to the most eastern arm of Robinson Lake; thence by a portage to a small lake; thence by another portage to another small lake. From the sand beach on the southeast arm of this last lake a trail was blazed over the rough timbered and rocky hills to the station. Lines were cut at the station to see stations "Gill," "German," and "Glint."

Station mark: A drill hole within a triangle cut in the rock.

Gill (Ontario, Rainy River District; W. B. Fairfield, 1913; 1914).-On the west side of Basswood Lake, about 800 meters northeast of the head of the bay from which Basswood River flows, and about 700 meters northwest from the shore line of the main body of the lake. The station is on a high timbered hill, detached from the surrounding heights by low passes on all sides.

Station mark: A drill hole within a triangle cut in the smooth granite ledge of the summit.

Have (Minnesota, Lake County; W. B. Fairfield, 1913; 1914).—On the south side of Basswood Lake, southeast across the lake and about 2 miles distant from Basswood Falls. The station is on the summit of a high, detached hill just back of a small oval bay. It is on the bare, solid, ledge of the summit. Station mark: A bronze disk set in the ledge.

Fluke (Minnesota, Lake County; W. B. Fairfield, 1914; 1924).—On the south side of Basswood Lake, between Jackfish Bay and Leo Chosa Bay. The station is about one-half mile northeast of the bend in Pipestone Bay, on the highest point of a bare rock hill.

Station mark: A drill hole within a triangle cut in the rock.

Fear (Minnesota, Lake County; W. B. Fairfield, 1914).-On the south side of Basswood Lake. The station is on the northwest side of the large western arm of Jackfish Bay, about 3 miles northeast from Jackfish Bay hoist. The station is most easily approached via a trail which begins opposite the southwest end of a large island lying between this western arm and the main part of Jackfish Bay.

Station mark: A drill hole within a triangle cut in the rock.

Fote (Minnesota, Lake County; W. B. Fairfield, 1914) .- On the south side of Basswood Lake, between Pipestone and Jackfish Bays, about 3 miles southwest of the mouth of Pipestone Bay and about 2 miles east of the Swallow and Hopkins hoist and railroad.

Station mark: A drill hole within a triangle cut in the rock.

Finn (Minnesota, Lake County; W. B. Fairfield, 1914).-On the south side of Basswood Lake. The station is on the summit of a bare hill about 1½ miles northwest of the warehouse and hoist of the St. Croix Lumber & Manufacturing Co., and about one-half mile north of their railroad.

Station mark: A drill hole within a triangle cut in the rock.

Handy (Minnesota, Lake County; W. B. Fairfield, 1913; 1914).-On the south end of Basswood Lake, on the high bare rocky hill on the point 1,300 meters northeast across the bay from Hoist Camp and Hoist Portage. The station is on the highest part of the hill, on a solid granite ledge, about 200 meters back from the lake.

Station mark: A drill hole within a triangle cut in the ledge.

Fagin (Minnesota, Lake County; W. B. Fairfield, 1914).-On the south side of Basswood Lake, about 21/2 miles due west of Canadian Point. The station is about three-fourths mile north of the west end of the large southern bay of the lake. A marshy inlet extends north from the bay to a point about 400 meters from the station. The station is on the highest point of a bare rocky hill.

Station mark: A drill hole within a triangle cut in the rock.

Frump (Minnesota, Lake County; W. B. Fairfield, 1914; 1915).-On the south side of Basswood Lake, about 1% miles west of the St. Croix Co.'s hoist and railroad to Fall Lake. The station is on a high hill just south of a narrow channel in this south arm of the lake, and about 90 meters west of a gorge. It is about 20 meters above the lake.

Station mark: A drill hole within a triangle cut in the rock.

English (Ontario, Rainy River District; W. B. Fairfield, 1914).-On the north side of Basswood Lake, just west of Merriam Bay. The station is on Canadian Point just north of English Channel, and is opposite the northeast end of the large island that lies between the boundary channel and English Channel. It is on the highest rock in the Norway pine woods, about 100 meters north of the shore.

Station mark: A drill hole within a triangle cut in the rock.

Fate (Minnesota, Lake County; W. B. Fairfield, 1914).—At the south end of Basswood Lake, between Basswood and Wind Lakes, about 1¼ miles southeast of the mouth of Wind Lake. The station is on a high, bare rocky ridge between two poplar groves, one to the east and one to the west of it. The station is best approached via Wind Bay and a tote road along the north side of Wind Lake. About 1 mile east of Wind Bay a blazed trail leads up to the station.

Station mark: A drill hole within a triangle cut in the rock.

Echo (Ontario, Rainy River District; W. B. Fairfield, 1914).-Between Birch and Basswood Lakes, about 1¼ miles northeast of Prairie Portage. The station is on the crest of the west end of a densely wooded ridge, 500 meters east of the head of the first large bay in Basswood Lake, and 700 meters northwest from the shore line of Birch Lake.

Station mark: A drill hole within a triangle cut in the rock.

Ensign (Minnesota, Lake County; W. B. Fairfield, 1915).—About 3 miles south of the east end of Ensign Lake. The station is on the highest point of a very high, wooded hill. The station may be reached by following the small river that enters the lake near the east end to an old dam. Thence take a southwest course to the station.

Station mark: A bronze disk set in rock.

**Higher** (Minnesota, Lake County; W. B. Fairfield, 1915).—About 650 meters south of Melon Lake and about 1% miles southeast of Carp Portage. The station is on top of a prominent, nearly bare rock hill due south of reference monument 865.

Station mark: A bronze disk set in the rock.

**Driggs** (Minnesota, Cook County; W. B. Fairfield, 1912).—On Saganaga Lake, on a very large irregularly shaped island lying north of the point between the two long southern arms of the lake and next to the open water of the lake. The island is divided by inlets into an east and a west lobe. The western lobe is high, rocky, and covered with timber. The station is on the highest point and near the center of the western lobe. Station mark: A drill hole within a triangle cut in the solid granite ledge of the summit.

**Dunlap** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the highest timbered knoll on the ridge between Mariboeuf (Gneiss) Lake and the eastern of the two long southern arms of Saganaga Lake. The station is about 1,200 meters due west of the most western bay of the northern wide expanse of Mariboeuf Lake. It is 1,100 meters south of a large inclosed or nearly land-locked bay on the east shore of Saganaga Lake and 1,000 meters east of the main shore line of that lake. The station is on a solid granite ledge on the summit of the knoll.

Station mark: A drill hole within a triangle cut in the ledge.

**Domino** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, on the point between the two long southern arms of the lake, and about 2,000 meters northeast of the western of the two arms. The station is on the summit of a hill, about 100 meters back from the shore and about 18 meters above the level of the lake. A large island lies just off the shore a little to the northeast of the station.

Station mark: A drill hole within a triangle cut in the smooth granite ledge of the summit.

Dixie (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south side of Saganaga Lake, on the high, wooded ridge about 1,300 meters south 20° west of Rocky Point, and about 450 meters due south of the west arm of the bay that lies just west of Rocky Point. The station is on the smooth granite ledge on the summit of the ridge.

Station mark: A drill hole within a triangle cut in the ledge.

**Dicker** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, on Rocky Point which is the extreme point at the angle of the shore between the extreme western arm and the southern part of the lake. The station is on a large fixed rock about 3 meters from the water's edge.

Station mark: A bronze disk set in the rock.

**Dubois** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west side of Maraboeuf or Gneiss Lake, on the high rounding pine-covered hill 200 meters west of the lake, and 500 meters south of the most northern large bay indenting the west shore of the lake. The station is on the smooth granite ledge that forms the summit of the hill.

Station mark: A drill hole within a triangle cut in the ledge.

**Dye** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the summit of the high ridge west of Maraboeuf, or Gneiss Lake. The station is about 500 meters west of the south end of the lake and about 600 meters south of the first long narrow inlet on the west side of the lake. It is approximately west-southwest of the narrows at the entrance to the lake.

Station mark: A drill hole within a triangle cut in the smooth granite ledge of the summit.

Champ (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the summit of the high rocky ridge west of Round Lake and 700 meters north of the narrows at the outlet of the lake. The river, after leaving the lake, makes a big bend to the north and flows along the base of the ridge about 300 meters southwest of the station.

Station mark: A drill hole within a triangle cut in a solid ledge.

Droit (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south side of Maraboeuf or Gneiss Lake, almost directly south of the east end of the lake. The station is on the high ridge about 400 meters south of the lake shore at the most southeastern point of the lake. It is on the highest point of an extensive granite ledge on the summit and east end of the ridge.

Station mark: A drill hole within a triangle cut in the ledge.

**Dimple** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the east end of the high range known as Granite Hills that lies northwest of Magnetic Lake. The station is on a bare summit of almost solid granite with cliffs on all sides. It is about 650 meters northwest of the head of the little cove that lies just west of the rocky island in the northern part of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Chris (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the north side of Magnetic Lake, on the high, wooded, round-topped hill about one-half mile due east of the rapids at the outlet of the lake. The station is on the highest point of the hill, on a solid granite ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Carlos (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—About 400 meters north of Granite Lake and about 900 meters east of Granite River. The station is about 60 meters above the level of the lake, on the south spur of a high ridge overlooking the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Dotty** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south side of Gunflint Lake, a little east of the west end of the lake. The station is near the top of the west end of the high ridge one-half mile back from the lake shore. An old road from the lake tops the ridge about 200 meters east of the station.

Station mark: A bronze disk set in a rock ledge.

Dulce (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south shore of Gunflint Lake, on the first prominent timbered point 1<sup>3</sup>/<sub>4</sub> miles east of the west end of the lake. The station is on a large rock 3.5 meters back from the water's edge.

Station mark: A bronze disk set in the rock. Reference monument 1114 bears south, 59° 36' east, 5.5 meters distant from the station.

West Dotty (Minnesota, Cook County; Jesse Hill, 1917).—On the south side of Gunflint Lake at its west end. The station is near the top of a ridge about 700 meters south of the lake shore. It is among some small poplar trees on the north slope and near the west end of the ridge.

Station mark: A cross on a partly buried bowlder.

Caddie. (See description of reference monument 1117.)

**Dam** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west shore of Gunflint Lake, on the tip of the long point 300 meters south of the outlet of Gunflint Lake into Magnetic Lake. The station is on a large flat rock 2.5 meters back from the water's edge. A large poplar tree stands about 4.5 meters back from the station.

Station mark: A bronze disk set in the rock.

Dough. (See description of reference monument 1118.)

Chowder (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of Gunflint Lake, on the prominent point south of the large bay which lies 2¾ miles east of the outlet into Magnetic Lake. The station is on the most lakeward part of the point, on a solid rock ledge, 2.5 meters back from the lake shore and about 0.3 meter above the lake level. Island No. 8 lies about 375 meters to the northeast of the station.

Station mark: A bronze disk set in the ledge.

**Den** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of Gunflint Lake, 2¼ miles west of the mouth of the stream entering the lake from Little Gunflint Lake. The station is 800 meters west of the entrance to an inlet that lies back of a high islandlike ridge at the foot of which stations "Denby" and "Drone" are situated. It is on a large bowlder about 2 meters from the shore line.

Station mark: A bronze disk set in the bowlder.

Denby (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of Gunflint Lake, about 2¼ miles west of the mouth of the stream flowing from Little Gunflint Lake. At this point there is an islandlike ridge about one-half mile long, parallel to the general shore line, that stands out from the mainland and is only connected thereto by a low marshy isthmus. The station is on the north shore of this ridge about 200 meters from the west end. It is on a large rock, about 2 meters from the shore line, and 1 meter above the lake level. Station mark: A bronze disk set in the rock.

Cult (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of Gunflint Lake, on a prominent rounding point, 1¾ miles west of the stream entering the lake from Little Gunflint Lake. The station is on a large rock, 1.5 meters from the water's edge and 0.7 meter above the lake level.

Station mark: A bronze disk set in the rock.

**Drone** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of Gunflint Lake, about 2 miles west of the mouth of the stream from Little Gunflint Lake. There is an islandlike ridge about one-half mile long, parallel to the general shore line, that stands out from the mainland and is only connected thereto by a low marshy isthmus. The station is on the north shore of this ridge midway between its ends, on a large rock, about 1 meter from the shore line and 0.5 meter above the lake level.

Station mark: A bronze disk set in the rock.

# DESCRIPTIONS OF TRIANGULATION AND TRAVERSE STATIONS 507

Cutts. (See description of reference monument 1125.)

Card (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—On the south side of North Lake, on the high rock cliff 150 meters back from the shore line and 200 meters east of Height-of-Land Portage. The station is 2 meters back from the edge of the most western cliff, on a solid ledge of rock.

Station mark: A drill hole within a triangle cut in the rock.

Dally (Minnesota, Cook County; W. B. Fairfield, 1911).—On the divide between the west end of North Lake and Little Gunflint Lake. The station is on the summit of a high rocky knoll that has cliffs on its north and west sides. It is about 700 meters northeast of the west end of North Lake and about 500 meters north of the shore of North Lake.

Station mark: A drill hole within a triangle cut in the solid ledge.

**Double** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south side of South Lake, about 400 meters east of the west end of the lake and about 400 meters south of the shore line. The station is on the highest one of the first line of cliffs on the top of the ridge.

Station mark: A bronze disk set in a solid granite ledge.

Divide (Minnesota, Cook County; W. B. Fairfield, 1911).—On the highest point of the height of land between North and South Lakes, west of Height-of-Land Portage. The station is three-fourths mile west of Height-of-Land Portage. It is on the smooth rock ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Dime (Minnesota, Cook County; W. B. Fairfield, 1911).—On the top of the high ridge on the south side of South Lake, directly opposite Height-of-Land Portage. The station is on a large rock about 150 meters west of the highest part of the ridge.

Station mark: A drill hole within a triangle cut in the rock.

Crane (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of South Lake, almost midway between the ends of the lake, on the fourth prominent point from the east end. The station is on a large rock, about 2 meters from the water's edge and 1 meter above the level of the lake.

Station mark: A drill hole in the rock.

Dandy (Minnesota, Cook County; W. B. Fairfield, 1911).—On the north side of South Lake, just west of the second point west of Height-of-Land Portage. The station is west of the little bay, which is west of the point, on the summit of a rock cliff about 150 meters back from the lake shore, and about 40 meters above the level of the lake. A deep canyon to the north of the station cuts it off from the higher cliffs to the north.

Station mark: A bronze disk set in the smooth granite ledge.

**Dade** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of South Lake, about midway between the ends of the lake. The station is on a prominent point one-half mile west of a gorge and small stream breaking through the regular steep hillside along the lake. It is on a large rock, on the most northern part of the point, 1.5 meters from the water's edge, and 0.7 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Back** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south side of Rose Lake, one-half mile east of Rat Portage, and 400 meters south of the lake, on the high bluff overlooking the lake. The station is on the first wooded ridge west of station "Blatz," about 100 meters below the top of the ridge. There is a high cliff near the top of the ridge.

Station mark: A drill hole within a triangle cut in the rock.

Blatz (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south side of Rose Lake, on the summit of the high rock cliff 1 mile east of Rat Portage, and about 350 meters south of the lake shore. The station is on the smooth rock ledge about 7.5 meters back from the edge of the cliff.

Station mark: A drill hole within a triangle cut in the ledge. Station "Bully" is on the same ridge about 120 meters east of the station.

Cap. (See description of reference monument 1183.)

Agile (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north side of Rose Lake. The station is on the spur ridge, 400 meters north of the Bishop Lumber Co.'s camp, which is on the narrowest part of that portion of the lake known as Mud Lake. It is on a large, white rock on the ridge or crest of the spur.

Station mark: A drill hole within a triangle cut in the rock.

**Bully** (Minnesota, Cook County; W. B. Fairfield, 1911; 1917).—On the south side of Rose Lake, on the summit of the high rock cliff 1 mile east of Rat Portage and 300 meters south of the lake shore. The station is on the same ridge as station "Blatz" and about 120 meters east of "Blatz." A line was cleared between the two stations.

Station mark: A drill hole within a triangle cut in the rock.

**Bold** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south side of Rose Lake just after entering the narrow part of the lake known as Mud Lake. The station is 200 meters south of the shore at its nearest point, and is on the summit of the high ridge that breaks into cliffs and bluffs toward the lake. It is at the east end of the ridge, about 2 meters back from the edge of the cliff.

Station mark: A drill hole within a triangle cut in the rock.

Balsam (Minnesota, Cook County; W. B. Fairfield, 1910).—On the south side of Rose Lake, 1% miles west of the east end of the lake, and about 300 meters back from the shore line. The station is on the summit of a high ridge, on a ledge just back from the edge of a cliff.

Station mark: A drill hole within a triangle cut in the ledge.

Arthur (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north shore of Rose Lake, about 200 meters west of the prominent point at the entrance to the narrow part of the lake. The station is on a large rock about 2 meters from the water's edge and 0.7 meter above the lake level.

Station mark: A bronze disk set in the rock. Reference monument 1197 bears north  $9^{\circ}$  west, 1.64 meters distant from the station.

Antrim. (See description of reference monument 1201.)

Atom (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north side of Rose Lake, threefourths mile west of the east end of the lake and about one-fourth mile east of the stream that flows into Arrow Lake. The station is on the high rock cliff just back from the concave bend of the shore line. It is on the highest part of the cliff, about 4 meters back from the edge.

Station mark: A drill hole within a triangle cut in the rock.

**Belt** (Minnesota, Cook County; W. B. Fairfield, 1910).—On the south shore of Rose Lake, 1,100 meters from the east end of the lake. The station is on the most western of several small points of the rounding shore line. The shore is a mass of large irregularly shaped bowlders. The station is on a large flat bowlder, near the water's edge, and 0.5 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock. Reference monument 1196 bears south  $17^{\circ}$  west, 7.5 meters distant from the station.

Argot (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the east end of Rose Lake, on the high rocky point, 750 meters north of the mouth of the boundary stream from Watap Lake and 150 meters east of the lake shore. There is a very high cliff about 400 meters north of the station on the same ridge. The station is on a ledge on a projecting spur about 75 meters above the lake level.

Station mark: A drill hole within a triangle.

West Bone (Minnesota, Cook County; Jesse Hill, 1917).—On the south side of Rose Lake, nearly due south of the east end of the lake, about 750 meters southeast of the mouth of the stream from Watap Lake to Rose Lake, and about 400 meters south of the portage trail where it passes through a small marshy place. The station is on a ridge on a small summit. A higher point of the ridge, heavily timbered, is southwest of the station. Lines of sight were cleared through heavy timber in four directions.

Station mark: A drill hole within a triangle cut in the rock.

**Bay** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south side of Watap or Rove Lake, about 400 meters east of the west end of the lake and about 300 meters from the lake shore, on the summit of the high wooded hill above reference monument 1206.

Station mark: A drill hole within a triangle cut in a solid ledge of rock.

**Best** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south side of Watap or Rove Lake, 1½ miles west of the east end of the lake, on the summit of the high rock cliff that is abreast of the narrows. Reference monument 1220 is on the same cliff some 300 meters to the east. The station is on the smooth rock ledge of the summit.

Station mark: A bronze disk set in the ledge.

Angus (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north side of Watap or Rove Lake, 1½ miles west of the east end of the lake, one-half mile back from the shore line, on the first high timbered ridge. The station is on the south slope of the ridge near the summit, on a smooth flat rock ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Aborn (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—About 750 meters northeast of the east end of Watap or Rove Lake, on the southern slope of the first high wooded ridge very near the top of the ridge. The station is on a large, smooth, flat ledge.

Station mark: A drill hole within a triangle cut in the ledge.

**Blow** (Minnesota, Cook County; W. B. Fairfield, 1910).—Four hundred meters south of the east end of Rove Lake, on the high wooded bluff and cliff. The station is on the slope, back from the cliff on the point that

projects out to the north, and is almost on top. It is on a flat, smooth ledge. A drill hole within a triangle was cut in the ledge about 50 meters to the east, and then abandoned for this station.

Station mark: A bronze disk set in the ledge.

Bronx (Minnesota, Cook County; W. B. Fairfield, 1910).—On the south side of Mountain Lake, 2 miles east of the west end of the lake, on the summit of the high rocky bluff point that is opposite two small adjoining bays on the north shore. The station is on the solid rock ledge above the cliff on the lake side of the point. Station mark: A drill hole within a triangle cut'in the rock.

Abner (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north side of Mountain Lake, on the summit of the ridge about 400 meters north of the large bay that indents the north shore about 2½ miles east of the west end of the lake. The station is about 400 meters from the lake, on a large, flat, smooth ledge. Station mark: A drill hole within a triangle cut in the ladge.

Station mark: A drill hole within a triangle cut in the ledge.

**Burke** (Minnesota, Cook County; W. B. Fairfield, 1910; 1918).—On the south side of Mountain Lake, on the summit of the high rounding knoll with a cliff face toward the lake and is just opposite the narrows. The station is on a large, flat, smooth ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Amber (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1918).—On the north side of Mountain Lake, on the second ridge back from the first large bay from the east on the north side of the lake. The ridge is high and covered with a dense growth of jack pine. The station is on the end of the ridge near the highest part, and is on a large smooth ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Nell (Minnesota Cook County; Jesse Hill, 1918).—Near the east end of Mountain Lake, about 450 meters due south of the outlet of the lake. The station is on the summit of the high flat-topped ridge, about 20 meters east of the slope toward Mountain Lake.

Station mark: A bronze disk set in a granite outcrop.

Bluffer (Minnesota, Cook County; W. B. Fairfield, 1910; 1918).—On the south side of Mountain Lake, 1¼ miles distant and on the third high rocky cliff from the east end of the lake. The station is on the solid rock summit of the cliff-like ridge.

Station mark: A drill hole within a triangle cut in the solid rock.

Alfred (Ontario, Thunder Bay District; Jesse Hill, 1918).—About 1 mile due north of the Moose Portage trail where it leaves Moose Lake for North Fowl Lake. The station is on the west end of the summit of the high ridge.

Station mark: A bronze disk set in solid rock.

Arrow (Ontario, Thunder Bay District; Jesse Hill, 1918).—About one-half mile north of Moose Lake and about northwest of the east end of the lake. The station is near the west end of the summit of a high hill. There is a small peak or shoulder on the east side of the hill and a high ridge about three-eighths mile to the west.

Station mark: A bronze disk set in solid rock.

Alta (Ontario, Thunder Bay District; W. B. Fairfield; 1910; 1918).—On the south side of South Fowl Lake, on the first high rock cliff east of the dam, and just east of the place where the portage leaves the lake. The station is on the highest part of the cliff, about 2 meters back from the edge of the west face.

Station mark: A bronze disk set in the solid ledge. A <sup>3</sup>/<sub>4</sub>-inch steel drill driven in a crack in the rock and marking station "Alta ecc. 1918" is 9.64 meters south of the station.

Seven (Ontario, Thunder Bay District; Jesse Hill, 1918).—About 2½ miles east of South Fowl Lake and about one-third mile north of the tote road between Camp Seven and the slide at South Fowl Lake. The station is on the south side of a high pine-covered ridge about one-half mile west of a small lake that lies on the north side of the tote road. A bowlder 1.5 meters high lies 6 meters northwest of the station.

Station mark: A bronze disk set in a rock outcrop.

Pete (Ontario, Thunder Bay District; Jesse Hill, 1918).—Between Pigeon and Arrow Rivers, about 1½ miles northwest of The Cascades of Pigeon River. The station is on a high bluff, which overlooks the Arrow River Valley to the north and east, and is about one-half mile north of the ridge that parallels Pigeon River. It is on the southeast corner of the top of the bluff, where there is an abrupt slope to the edge of the bluff about 8 meters east of the station.

Station mark: A bronze disk set in the rock.

Spike (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River and the west side of Swamp River, about 300 meters from Swamp River and about 600 meters from the junction of the two rivers. The station is on the highest point of the first high peak on the west side of Swamp River.

Station mark: A bronze disk set in solid rock.

Partridge (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River, about 1 mile west of Partridge Falls. The station is on the summit of the high, timbered bluff 300 meters south of the river. Station mark: A bronze disk set in solid rock.

Butte (Ontario, Thunder Bay District; Jesse Hill, 1918).-On the north side of Pigeon River and in the forks of Pigeon and Arrow Rivers, about 2 miles northwest of the forks. The station is on a high burnt peak with precipitous rocky slopes on all sides but the eastern, which has a moderate slope. The peak is on a straight east-and-west ridge of some extent through which the Arrow River has cut a deep gap.

Station mark: A bronze disk set in solid rock.

Auto (Ontario, Thunder Bay District; Jesse Hill, 1918).-On the north side of Pigeon River, about one-half mile north of Little Falls. The station is on the southwest end of the high bluff ridge west-northwest of the sharp bend in the river where the Scott Highway leaves the river.

Station mark: A drill hole in rock.

Mt. Josephine (Minnesota, Cook County; U. S. Lake Survey, 1869; Department of Marine and Fisheries of Canada, 1902; Jesse Hill, 1918).-About 11/2 miles northeast of the village of Grand Portage, on the shore of The station is on the summit of the hill known as Mount Josephine. It is on the eastern side Lake Superior. of a bare rock top overlooking Wauswaugoning Bay to the east. The station was first established by the lakes survey in 1869, but no permanent mark was left. It was reestablished in 1902 by W. J. Stewart, a hydrographer for the Dominion Government, Mr. Stewart thinks within 10 feet of the original position. M. J. Graves, of the United States Engineers, occupied it in 1906 and further marked the station.

Station mark: The marks as described by Mr. Graves are: A 3/s-inch brass bolt cemented into the bare rock. The letters "U. S. 1906" are scribed on a cement pat adjoining the bolt on the west. Twenty-eight feet west of the geodetic point a sixtypenny iron spike is set in a cement pat with the point of the spike toward the station. This pat is scribed  $\frac{\text{``R M''}}{\text{``R M''}}$ .

### 28.0

W. B. Fairfield occupied the station for the International Boundary Commission in 1908 and reports finding the marks of 1906 intact. Jesse Hill occupied the station for the boundary commission in 1918 and records "a 3/s-inch steel rod set in the rock" as the station mark he found. He also reports finding a triangle cut in the rock 180 feet a little north of west from the station. He says the mark might have been corroded copper, and that he might have mistaken it for steel without careful examination. He did not observe the cement pats and the lettering described in 1906, but did not look for them, as he had no copy of the former description with him. He verified Mr. Fairfield's station by duplicating his angles to distant stations.

Morris (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River, about one-fourth mile up the river from its mouth and about southwest of the Pigeon River Lumber Co.'s old camp buildings, which are on the north side of the mouth of the river. The station is on a small peak which overlooks the river bottom, though the bluff rises to a higher level southeast of the station.

Station mark: A bronze disk set in solid rock.

Between (Ontario, Thunder Bay District; W. B. Fairfield, 1908; 1918) .- On the Canadian side of Pigeon Bay of Lake Superior. The station is on the west peak of the range of rocky hills that lies between the north and south arms of Pigeon Bay. It is on the highest point of the peak, which is very rocky and rises to a height of about 60 meters above the lake.

Station mark: A drill hole within a triangle cut in the rock.

West End (Ontario, Thunder Bay District; W. B. Fairfield, 1908).—On the sharp, rocky western peak of the range of hills that extends west from Pine Bay of Lake Superior. The peak is about 1 mile north of the head of North Arm Bay and it shows prominently as the first one from the head of the bay. The summit of the peak is rocky with cliffs on the north and on the south sides. The station is on the solid rock of the highest point of the hill, about 120 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Danger (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River, about 1 mile southwest of High Falls and about one-half mile northwest of the head of Wauswaugoning Bay of the Lake Superior coast line. The bay is visible from the station. The station is on the highest point of a rock knob about one-fourth mile northeast of a higher peak.

Station mark: A bronze disk set in solid rock.

Mollie (Ontario, Thunder Bay District; W. B. Fairfield, 1908) .- About one-half mile northwest of Big Trout Bay of Lake Superior. The station is on the summit of the high, rocky hill known as Mount Mollie. This station had been previously used by some Canadian survey, and the signal was found still standing and used by Mr. Fairfield.

Station mark: No record available.

#### DESCRIPTIONS OF TRIANGULATION AND TRAVERSE STATIONS 511

N. W. Royal (Michigan, Keweenaw County; U. S. Engineers, 1906; W. B. Fairfield, 1908) .- On Isle Royal, Lake Superior. The station is on the summit of the narrow ridge along the west shore of the island just north of Washington Harbor. It is reached by a trail leading up from the little bay northeast from an isolated rock, which is about three-fourths mile north of the channel between the mainland and the island just north of the entrance to Washington Harbor. About 27 meters of the ridge summit was cleared. The station is about 4.8 meters from the northeast end of the ridge and about 2.5 meters from the bold north edge of the ridge.

Station mark: A 5%-inch drift bolt driven into hard pan until its top is 0.5 meter below the surface of the ground. The surface mark is a %-inch steel boiler tube. An 8-inch blazed balsam tree, marked with nails and spikes driven in the blaze in the form of a triangle, bears east 7.9 meters distant from the mark.

Knob (Ontario, Thunder Bay District; U. S. Lake Survey, 1869; Canadian Department of Marine and Fisheries, 1902; U. S. Engineers, 1906; W. B. Fairfield, 1908).-On Lake Superior on Victoria Island, just south of Victoria Cove. The station is on the high knob on the south side of the bare and rocky island. No permanent mark was left in 1869. In 1902 a signal was built and determined to be within 2 feet of the position of 1869. A Canadian penny, placed under the center pole of the signal in 1902, was recovered in 1906, at which time the permanent mark was set.

Station mark: A 3/s-inch brass bolt leaded into the rock.

### LAKE OF THE WOODS AND RAINY RIVER, MINOR SCHEMES

Center (Ontario; Kenora District; J. J. McArthur, 1912).-On the highest part of the island between Oak and Cyclone Islands, in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 35 miles southwest of Kenora, Ontario. Reference monument 33 is about 800 feet south on the same island. Station mark: Drill hole in rock.

Brush (Minnesota, Lake of the Woods County; J. J. McArthur, 1912).-On the west end of Brush Island, in Lake of the Woods, near Northwest Angle Inlet, about 35 miles southwest of Kenora, Ontario, and the same distance northeast of Warroad, Minn.; on a ledge 10 feet from shore about 300 feet south of the western end of the island. Reference monument 26 is on the northeast end of the same island.

Station mark: Bolt driven at intersection of two crevices.

Mass (Ontario, Kenora District; J. J. McArthur, 1912).-On the highest part of Massacre Island, in Lake of the Woods, about 36 miles northeast of Warroad, Minn., and 36 miles southwest of Kenora, Ontario. Station mark: Drill hole in rock.

Target (Minnesota, Lake of the Woods County; J. J. McArthur, 1912).-On a small island, in Lake of the Woods, about 31 miles northeast of Warroad, Minn., and 39 miles southwest of Kenora, Ontario, on the highest part of the middle one of three small islands about 11/2 miles northwest of Little Oak Island.

Station mark: Drill hole in rock.

Furman (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .- On the south bank of Rainy River, at Spooner, Minn., about 300 meters east of the mouth of Baudette River, about 6 meters above and 6 meters back from the water. The station is 2 meters back from the edge of the river bank, in the Spooner lumber-mill yard, about 120 meters west of the steam hoist, and 200 meters east of the mill.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Creamery (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .- In Spooner, Minn., on the east bank of the Baudette River, about 8 meters above and 55 meters back from the water. The station is about 17 meters southeast of a red ice-house, 40 meters east of the creamery building, and 210 meters west-southwest of Spooner water tank.

Station mark: A bronze disk set in concrete.

Empress (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about onehalf mile west of the town of Rainy River, Ontario, and about 500 meters east of the Canadian National Railway bridge. The station is about 1 meter above and 5 meters back from the water; 2 meters south of the south rail of the railroad; 2 meters east of a switch block; and 80 meters east of the barrel-stave factory.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Emma (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .-- On the south bank of Rainy River, near Spooner, Minn., about one-half mile east of the mouth of Baudette River. The station is about 6 meters above and 11 meters back from the water, 13 meters north of the northwest corner of a small red building, and 24 meters east of a skidway.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Ashes (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about onethird mile west of the town of Rainy River, Ontario. The station is about 1 meter above and 2 meters back from the water, 1.5 meters south of the south rail of the railroad, at a point just east of the east switch of the Y and 21 meters east-southeast of a small frame house.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Brooks (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about one-third mile west of the center of the town of Rainy River, Ontario. The station is about 75 meters back from the river's edge, 27 meters east of an old incinerator, and 22 meters north of a small frame building. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Rydberg (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainy River, opposite and about one-third mile downstream from the town of Rainy River, Ontario. The station is about 90 meters south of the river's edge, and about 18 meters south and 1.3 meters west of Rydberg's house.

Station mark: No surface mark. Subsurface mark is a bottle and a ball of wire.

Baraba (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .- On the south bank of Rainy River, opposite the town of Rainy River, Ontario. The station is about 8 meters above and 37 meters back from the river, 9 meters west of the line of an old north-and-south fence, and 15 meters west of the line of Fourth Street produced of the town of Rainy River.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Pounder. (See description of reference monument 90.)

Carson (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, in the town of Rainy River, Ontario. The station is about 2 meters west of the center of the north-and-south street passing the school building, 1 meter above and 12 meters back from the river's edge, 8 meters south of the prolongation of the line of the south rail of a bridge, which is 100 meters west of the station.

Station mark: A bronze disk set in concrete.

Bachtel. (See description of reference monument 91.)

Fuzzy (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainy River about 1½ miles east of Spooner, Minn., and about two-thirds mile east of the Rainy River dock. The station is about 5 meters above and 15 meters back from the river, and 13 meters west of the corner of a house.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Phone (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 1 mile east of Fourth Street, Rainy River, Ontario. The station is about 5 meters above and 15 meters back from the river's edge, about 100 meters east of a large slough inlet, 12 meters southeast of a small slough, and 4 meters southeast of a telephone pole.

Station mark: No surface mark. Subsurface mark is a stone and a ball of wire.

Steam (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .- On the south bank of Rainy River, about seven-eighths mile above the dock at the foot of Fourth Street, Rainy River, Ontario. The station is opposite the mouth of a wide slough, about 4 meters above and 6 meters back from the river, in front of a house with blue trim, and 21 meters east of a root house.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Crow (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 11/4 miles from the foot of Fourth Street, Rainy River, Ontario. The station is about 5 meters above and 20 meters back from the river's edge, 58 meters east of a fence, on the west side of a slough inlet, and opposite the boom crew's boarding house.

Station mark: A cross cut in a stone. Subsurface mark is a stone and a ball of wire.

Tunnel (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about 11/2 miles southeast of the town of Rainy River, Ontario. The station is in a hay field, about 14 meters west of a section-line fence and 73 meters south of the fence corner. It is about 4 meters above and 41 meters back from the river's edge.

Station mark: No surface mark. Subsurface mark is a stone and a ball of wire.

Tent (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainy River, about 1¼ miles southeast of the town of Rainy River, Ontario. The station is in a field of stumps, about 80 meters north of a house, and is 5 meters above and 6 meters back from the river's edge.

Station mark: A cross cut in outcropping rock.

Branch (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about 1% miles southeast of the town of Rainy River, Ontario. The station is on the edge of a grain field, and is opposite and about 30 meters north of the south end of a long, narrow island. A 20-inch oak bears west-southwest 6 meters distant, and a triple oak bears west-northwest from the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

#### DESCRIPTIONS OF TRIANGULATION AND TRAVERSE STATIONS 513

Object (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainv River, about 2 miles southeast of the town of Rainy River, Ontario. The station is about 46 meters southeast of a small house, 91 meters north-northeast of a barn, and about 300 meters due east of the northwest corner of section 8, township 160 north, range 30 west. It is 8 meters above and 11 meters back from the river's edge. Station mark: A bronze disk set in concrete.

Level. (See description of reference monument 95.)

Palm (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainy River, about 2¼ miles southeast of the town of Rainy River, Ontario, opposite a long, narrow island, and between two small streams. The station is about 5 meters above and 9 meters back from the river's edge, and 5 meters northnorthwest of a 12-inch oak tree.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Arrow (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about 21/4 miles southeast of the town of Rainy River, Ontario. The station is about 46 meters southwest of a house. It is about 1 meter above and 4 meters back from the river's edge, and just behind a pile of rocks. An 18-inch oak tree is about 24 meters east of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Derrick. (See description of reference monument 96.)

Five Roses (Ontario, Rainy River District; Jesse Hill, 1914) .-- On the north bank of Rainy River, about 2½ miles east of the town of Rainy River, Ontario, at Cedar Pole Landing. The station is about 5 meters above and 18 meters back from the river's edge and is 12 meters north of two 14-inch elm trees. Station mark: A cross cut in outcropping granite.

Stewart (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 2¾ miles east of the town of Rainy River, Ontario, and about 200 meters east of Stewart's house and 280 meters west of the mouth of a creek. The station is about 2 meters above and 6 meters back from the river's edge. A 3-foot bowlder is west-southwest 23 meters distant, and a large rock is southwest 5 meters distant from the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Picnic (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about 31% miles east of the town of Rainy River, Ontario, 180 meters east of the pier which is near the mouth of a creek. The station is on the edge of the bank, about 1 meter above and 6 meters back from the river's edge. Three piles bear southwest 45 meters from the station.

Station mark: No surface mark. Subsurface mark is a cross cut in a buried granite bowlder.

Roof (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .- On the south shore of Rainy River, about 3¼ miles west of Clementson, Minn. The station is about 4 meters south of a trail, 36 meters west of a fence. and 100 meters northwest of a red house. It is about 5 meters above and 12 meters back from the river's edge. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Calf (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainy River, about 3 miles west of Clementson, Minn. The station is southwest of the west end of the lumber company's sorting boom, and is about 12 meters west of the slough. It is about 1 meter above and 4 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Board (Minnesota, Lake of the Woods County; Jesse Hill, 1914) .-- On the south bank of Rainy River, about 2½ miles west of Clementson, Minn. The station is in a pasture, about 30 meters west of an old pier and 200 meters west of the lumber company's boarding house at the mouth of Silver Creek. It is about 1 meter above and 4 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Dean (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about 25% miles west of Clementson, Minn. The station is about 14 meters east of Robinson's house and is 3 meters above and 14 meters back from the river's edge.

Station mark: A bronze disk set in concrete.

Company (Minnesota, Lake of the Woods County; Jesse Hill, 1914).-On the south bank of Rainy River. about 2½ miles west of Clementson, Minn. The station is about 75 meters east of the lumber company's boarding house at the mouth of Silver Creek and 30 meters east of a fence.

Station mark: A bronze disk cemented in a granite bowlder.

96030-31-34

Walk (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 2<sup>3</sup>/<sub>8</sub> miles west of Clementson, Minn. The station is in a hay field, 30 meters from the river bank and 4 meters above the water. Walk's house bears west-northwest about 125 meters from the station.

Station mark: No surface mark. Subsurface mark is a ball of wire and a cross on a stone. Reference monument 99, an 8-inch manganese-bronze post, is 28.96 meters southwest of the station.

Tassel (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 2 miles west of Clementson, Minn., and about 200 meters east of the mouth of Gormley Creek. The station is on Van Tassel's place, about 14 meters east of a fence, and about 2 meters back from the top of the river bank. It is about 4 meters above and 6 meters back from the river's edge. A white house is due south on the United States shore.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Roberts** (Minnesota, Lake of the Woods County; Jesse Hill, 1914).—On the United States shore of Rainy River opposite the mouth of Gormley Creek, about 2 miles west of Clementson, Minn. The station is on the slope of the bank about 3 meters above and 21 meters back from the river's edge. It is about 24 meters northnorthwest of a white building and 12 meters due north of a log stable.

Station mark: No surface mark. Subsurface mark is a bottle and a ball of wire.

Ray (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1% miles west of Clementson, Minn. The station is in a hay field about 3 meters above and 15 meters back from the river's edge, 38 meters east of an old pier and about 100 meters south of a large barn.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Solid. (See description of reference monument 100.)

Buffy. (See description of reference monument 101.)

Lid (Minnesota, Lake of the Woods County; Jesse Hill, 1914).—On the south bank of Rainy River, about 1¼ miles west of Clementson, Minn. The station is in a clearing on the Johnson place, about 3 meters above and 6 meters back from the river's edge and 80 meters east of a fence.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Wilson (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1 mile west of Clementson, Minn. The station is about 73 meters west of the mouth of a creek and is 3 meters above and 24 meters back from the river's edge. Wilson's house is about 15 meters northeast of the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Gus. (See description of reference monument 102.)

Scotch (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about threefourths mile west of Clementson, Minn. The station is 5 meters south of the edge of a grain field and is about 2 meters above and 21 meters back from the river's edge, on a gentle slope. A house is northeast 100 meters and an old pier is east-southeast 80 meters from the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Cane (Minnesota, Lake of the Woods County; Jesse Hill, 1914).—On the south bank of Rainy River, about three-fourths mile west of Clementson, Minn. The station is 6 meters above and 11 meters back from the river's edge, on a narrow ridge between the river and a creek bed to the southeast. It is about 100 meters east of a fence. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Pasture.** (See description of reference monument 103.)

Sand (Minnesota, Lake of the Woods County; Jesse Hill, 1914).—On the south bank of Rainy River, about one-fourth mile west of the mouth of Rapid River. The station is opposite the second ice breaker near the boom and is on a slide in the bank, 2 meters above and 4 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Sutherland (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about one-fourth mile west of the mouth of Rapid River on the opposite side. The station is on the point of a ridge between the river and a swale 6 meters to the west. It is 5 meters above and 5 meters back from the river's edge. A 12-inch birch tree is 3 meters north of the station.

Station mark: A bronze disk set in concrete.

**Rapid.** (See description of reference monument 104.)

Second (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, opposite the mouth of Rapid River. The station is in a hayfield, 5 meters inside of the fence and 5 meters northwest

by west from a braced post in the fence. It is 11 meters from the edge of the top of the bank and about 45 meters east of Billy Sleeman's house.

Station mark: No surface mark. Subsurface mark is a cross cut in a stone over a ball of wire.

Lucy (Minnesota, Lake of the Woods County; Jesse Hill, 1914).—On the south bank of Rainy River, about one-third mile northeast of the mouth of Rapid River. The station is on a slope about 18 meters south of the top of the bank at a point about 150 meters southwest of the northeast corner of section 12, township 160 north, range 30 west. Lines were cut through the woods to adjacent stations.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Billy** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, opposite and one-fourth mile upriver from the mouth of Rapid River. The station is in a hayfield, property of Billy Sleeman, 4 meters northwest of a fence and 37 meters southwest of the fence corner at a gate. It is 9 meters above the river and 12 meters from the edge of the top of the bank.

Station mark: No surface mark. Subsurface mark is a cross cut in a stone over a ball of wire.

Williams (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about three-fourths mile northeast of Clementson, Minn. The station is on the point of a ridge in front of Williams's house and about 280 meters northeast of the intersection of the county line with the river. It is about 6 meters above and 9 meters back from the river's edge. A 24-inch pine tree is 3 meters northwest of the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Mill (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about seveneighths mile northeast of Clementson, Minn. The station is near the section line and in the edge of a field, the property of George Sleeman. It is about 50 meters east of a small creek, 8 meters above and 9 meters back from the river's edge. A 10-inch oak tree is about 5 meters southeast of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Lunch (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River about 1 mile northeast of Clementson, Minn. The station is about 6 meters above and 9 meters back from the river's edge, on the slope of the bank about 1 meter below the top. It is 2 meters north of the ridge between the river and a creek 12 meters wide.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

McCutcheon (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River about 1½ miles northeast of Clementson, Minn. The station is on top of the bank about 9 meters above and 15 meters back from the river's edge. It is about 4 meters east of an old fence and about 35 meters east of McCutcheon's house.

Station mark: A bronze disk set in concrete.

Milne. (See description of reference monument 106.)

Kearney. (See description of reference monument 107.)

Fender (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River about 1¾ miles northeast of Clementson, Minn. The station is 2 meters south of a wire fence, 4 meters above, and 9 meters back from the river's edge. There is a pile of rock 8 meters northwest of the station and Milne's house is 100 meters west.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Pitch (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River about 220 meters west of the mouth of Hanson Creek and about 2 miles east of Clementson, Minn. The station is about 8 meters above and 15 meters back from the river's edge. A small washout is 9 meters east of the station and a house is 100 meters south.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Steffenson (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River about 2½ miles east of Clementson, Minn. The station is in a pasture about 80 meters from the river, 100 meters northeast of a house, 23 meters west of a fence corner, and 6 meters south of the top of a ridge.

Station mark: No surface mark. Subsurface mark is a cross cut in a stone over a ball of wire.

Clean (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River about 2½ miles east of Clementson, Minn. The station is in the center of a clearing, on the slope of the bank, about 4 meters above and 6 meters back from the river's edge. The mouth of Bunting Creek, on the opposite side of the river, is about 400 meters northeast of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Broad (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 2½ miles east of Clementson, Minn., and 200 meters west of the mouth of Bunting Creek. The station is on the

summit of a ridge in a hayfield on Armstrong's property, about 75 meters west of a road and 55 meters north of the east-and-west part of the same road.

Station mark: No surface mark. Subsurface mark is a cross cut in a stone over a ball of wire.

Lipkie. (See description of reference monument 109.)

**Turnquist** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River about 2% miles east of Clementson, Minn. The station is about 8 meters above and 21 meters back from the river's edge at the east end of a timber landing. It is about 30 meters east of the section line between sections 5 and 6, township 160 north, range 29 west.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Robinson. (See description of reference monument 110.)

Straw (Ontario, Rainy River District; Jesse Hill, 1914).—On the north shore of Rainy River about 3¼ miles east of Clementson, Minn. The station is about 9 meters above and 15 meters back from the river's edge, on a small point of bank opposite the west end of a boom. It is about 300 meters east of the mouth of Budrow Creek.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Horse (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River about 3% miles east of Clementson, Minn. The station is about 9 meters above and 45 meters back from the river's edge. It is about 5 meters south of the southeast corner of a small hewed-log shack.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Trap** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 2 miles west of Central, Minn. The station is about 3 meters above and 3 meters back from the river's edge in the timber. A skidway is about 30 meters west of station and an old log cabin is across the river.

Station mark: No surface mark. Subsurface mark is a bottle and a ball of wire.

Limb (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about  $1\frac{5}{8}$  miles west of Central, Minn. The station is about 1 meter above and 3 meters back from the river's edge on a small, flat projection below a house which is about 45 meters distant.

Station mark: No surface mark. Subsurface mark is a bottle and a ball of wire.

**Reef** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 1¼ miles west of Central, Minn. The station is on the point of land on the west side of the entrance to a bay and creek. It is about 1 meter above and 2 meters back from the river's edge.

Station mark: No surface mark. Subsurface mark is a ball of wire.

Smart. (See description of reference monument 113.)

King (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about seven-eights mile west of Central, Minn. The station is about 2 meters above and 9 meters back from the river's edge on a little bench, and is about 11 meters east of King's boat landing.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

McGee (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1¾ miles west of Pinewood, Ontario, and 650 meters west-northwest of Central, Minn. The station is on the slope of the bank about 3 meters above and 8 meters back from the river's edge. It is about 17 meters west of a fence, 11 meters southeast of a 24-inch oak tree, and 11 meters east of 3 12-inch oak trees.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Central (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 9 meters northeast of the corner of the Central (Minn.) post office and store. The station is about 9 meters above the river.

Station mark: A bronze disk set in concrete.

Shade (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1½ miles west of Pinewood, Ontario, and opposite Central, Minn. The station is about 2 meters above and 6 meters back from the river's edge and about 15 meters west of the mouth of a creek. It is about 5 meters west of a fence.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Colvin (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about  $1\frac{1}{4}$  miles west of Pinewood, Ontario. The station is on a bench about 2 meters above and 11 meters back from the river's edge. It is about 8 meters east of a fence corner and 45 meters south by east from Colvin's house.

Station mark: A bronze disk set in concrete.

516

Bee (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about seveneighths mile southwest of Pinewood, Ontario. The station is about 5 meters above and 18 meters back from the river's edge, on a small ridge between the river and a slough. The slough is about 18 meters east of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Treau** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about seveneighths mile west of Pinewood, Ontario. The station is on top of the bank about 5 meters above and 8 meters back from the river's edge. There is a swale about 8 meters northeast of the station and an old stump about 12 meters west.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Poisson** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about onehalf mile west of Pinewood, Ontario, and about 380 meters west of the mouth of Pine Creek. The station is in a hayfield about 8 meters above and 27 meters back from the river's edge. It is about 14 meters from the south side of the field and a scrub oak, and about 50 meters west of a fence.

Station mark: A cross cut in a rock. Subsurface mark is a ball of wire.

**Pargie** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about one-half mile southwest of Pinewood, Ontario. The station is about 8 meters above and 30 meters back from the river's edge. It is on the edge of a field about 1 meter west of a fence and 9 meters north of a trail.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Camp** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River in the western part of Pinewood, Ontario. The station is south-southwest of the Roman Catholic Church, about 1 meter south of the church-lot fence and 23 meters east of the southwest corner post.

Station mark: A bronze disk set in concrete.

Fuel (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River opposite and southeast of the mouth of Pine Creek and southwest of the Pinewood (Ontario) Roman Catholic Church. The station is about 6 meters above and 11 meters back from the river's edge, and about 30 meters from the east side of a small clearing.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Pine.** (See description of reference monument 116.)

Tank (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 250 meters east of the Pinewood (Ontario) pier. The station is about 2 meters above and 3 meters back from the river's edge. It is about 30 meters west of an old pier, 45 meters southwest of an old cabin, and 75 meters southwest of a barn.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Stoltze (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about one-third mile south-southeast of Pinewood, Ontario. The station is on the edge of a bank, about 8 meters above and 45 meters back from the river's edge. It is about 45 meters northwest of a house and about 40 meters east of the road on the range line between ranges 28 and 29.

Station mark: A bronze disk set in concrete.

**Bend** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about one-half mile east of Pinewood, Ontario, and about 300 meters east of a small creek. The station is about 2 meters above and 3 meters back from the river's edge, behind the old piling of a pier.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

John. (See description of reference monument 117.)

Gilson (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about threefourths mile east of Pinewood, Ontario. The station is about 5 meters above and 11 meters back from the river's edge, and is about 1.5 meters from the corner of a fence and 12 meters from an old slide in the bank. Gilson's house is about 18 meters east of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Flynn** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about seven-eighths mile east of Pinewood, Ontario. The station is on the top of the river bank at the north side of an old road, about 12 meters above and about 45 meters back from the edge of the river. Flynn's house is about 50 meters west of the station.

**Terrace** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1% miles east of Pinewood, Ontario. The station is about 8 meters above and 17 meters back from the river and about 40 meters west of an old building.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Trail** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the United States shore of Rainy River. about 1½ miles southeast of Pinewood, Ontario, and one-fourth mile east of Border, Minn. The station is on a trail, at the top of the bank, about 9 meters above and 24 meters back from the river's edge. The station is about 9 meters south of the center of an east-and-west road.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Kerosene** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the United States shore of Rainy River, about 1% miles southeast of Pinewood, Ontario. The station is on a low wooded flat about one-third meter above and 5 meters back form the river's edge. It is nearly due south of Snyder's barn on the opposite side of the river.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Norland (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1¾ miles southeast of Pinewood, Ontario. The station is in a hayfield, about 1 meter inside a fence, 8 meters north of the top edge of the river bank, and 35 meters east of another fence.

Station mark: A bronze disk set in concrete.

Albert (Minnesota, Koochiching County; Jesse Hill, 1914).—On the United States shore of Rainy River, about 2 miles southeast of Pinewood, Ontario. The station is about two-thirds meter above and 5 meters back from the river's edge, and west of a timbered point north of Kavanagh's house.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Birch (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 2½ miles southeast of Pinewood, Ontario. The station is on a slope of the bank, about 2 meters above and 3 meters back from the river's edge. It is opposite Kavanagh's Point.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Kavanagh (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 1% miles north of the Frontier (Minn.) school. The station is about 12 meters above and 18 meters back from the river's edge. It is about 150 meters south-southeast of Kavanagh's house.

Station mark: A bronze disk set in concrete. Subsurface mark is a buried bottle.

Craigen. (See description of reference monument 122.)

Trulson (Minnesota; Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about 1<sup>3</sup>/<sub>8</sub> miles north of the Frontier (Minn.) schoolhouse. The station is in the brush near the top of the bank, about 11 meters above and 23 meters back from the river's edge. It is about 20 meters north of the edge of some cleared land.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Hart (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank of Rainy River, about 1% miles north of the Frontier (Minn.) schoolhouse. The station is in a pasture about 15 meters east of the edge of the bank and is about 6 meters above and 24 meters back from the river's edge. Lockhart's house is about 175 meters south of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Lock (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank of Rainy River, about 1¼ miles north of the Frontier (Minn.) schoolhouse and about 400 meters north of the mouth of Clement Creek. The station is in front of Lockhart's house, about 2 meters south of the line of the south side of the house and 11 meters from its southwest corner. It is about 5 meters above and 6 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Pearson. (See description of reference monument 124.)

End (Minnesota, Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about 1 mile north of the Frontier (Minn.) schoolhouse and opposite Pearson's house on the Canadian side. The station is about 8 meters north of a trail up the ridge, and is on a bench about 4 meters above and 9 meters back from the river's edge.

Station mark: A bronze disk set in concrete.

Window (Minnesota, Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about two-thirds mile north of the Frontier (Minn.) schoolhouse. The station is near the edge of a field, about 5 meters above and 6 meters back from the river's edge. It is about 30 meters south of a fence in a swale.

**Earl** (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank of Rainy River, about threeeighths mile northeast of the Frontier (Minn.) schoolhouse. The station is on a low bench about 2 meters above and 8 meters back from the river's edge. An old log cabin is south-southeast about 40 meters from the station and a large barn bears southeast about 90 meters distant.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Leave (Minnesota, Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about one-half mile north of the Frontier (Minn.) schoolhouse. The station is on a slope of the bank about 5 meters above and 9 meters back from the river's edge. A large barn across the river bears southeast from the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Loyd (Minnesota, Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about onefourth mile northeast of the Frontier (Minn.) schoolhouse. The station is on a slope of the bank about 1 meter above and 6 meters back from the river's edge. An 18-inch oak tree is about 3 meters east of the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

**Raft** (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank about one-fourth mile east by north of the Frontier (Minn.) schoolhouse. The station is on a bench about 6 meters above and 9 meters back from the river's edge. It is about 40 meters north of an old pier.

Station mark: A bronze disk set in concrete.

Cut. (See description of reference monument 126).

Wave (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank of Rainy River, about threeeighths mile southeast of the Frontier (Minn.) schoolhouse. The station is about 40 meters south of a swampy lake and is on a slope of the bank about 6 meters above and 18 meters back from the water's edge. There is an old log house about 20 meters east of the station and a barn about 30 meters to the south.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Bark (Minnesota, Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about fiveeighths mile north of the Frontier (Minn.) store. The station is about 80 meters north of a fence and about 6 meters east of a north-and-south road. It is about 8 meters above and 11 meters back from the river's edge. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Malone (Minnesota, Koochiching County; Jesse Hill, 1914).—On the west bank of Rainy River, about one-half mile north of the Frontier (Minn.) store. The station is about 125 meters north of the mouth of White-fish Creek, in a hayfield on Malone's place. It is about 6 meters from the top of the bank and 7 meters above the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Arnold (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank of Rainy River, about threeeighths mile north of the Frontier (Minn.) store. The station is in a hayfield, about 8 meters east of the top of the bank. It is about 50 meters north of Arnold's house and about 15 meters north of a small creek. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Vacant (Ontario, Rainy River District; Jesse Hill, 1914) .- On the east bank of Rainy River, about one-

fourth mile northeast of the Frontier (Minn.) store. The station is on the edge of a hayfield about 8 meters above and 12 meters back from the river's edge. An old barn bears south by east about 40 meters from the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Slough (Ontario, Rainy River District; Jesse Hill, 1914).—On the east bank of Rainy River, about one-fourth mile east of the Frontier (Minn.) store. The station is on the low grassy bank about 1 meter above and 2 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Spruce (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about one-third mile southeast of the Frontier (Minn.) store. The station is on the west side of the top of a round bench about 5 meters above and 6 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Son (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about threefourths mile southeast of the Frontier (Minn.) store and about 90 meters east of the mouth of a small creek. The station is on a low bench about 2 meters above and 6 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Hugh (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about threefifths mile east of the Frontier (Minn.) store. The station is near the south edge of a grainfield, about 30 meters from its east end. It is about 3 meters above and 5 meters back from the river's edge.

Meadow. (See description of reference monument 132.)

Clear. (See description of reference monument 133.)

Arbor (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 15% miles east of the Frontier (Minn.) store. The station is on a point between the river and a creek, about 30 meters east of the creek. It is about 8 meters above and 12 meters back from the river's edge. Station mark: A bronze disk set in concrete.

Tie (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 134 miles east of the Frontier (Minn.) store. The station is on a bluff about 15 meters above and 24 meters back from the river's edge, and about 50 meters east of the mouth of a creek.

Station mark: A bronze disk set in concrete.

Nose (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 1% miles east of the Frontier (Minn.) store. The station is on the east end of a small ridge, about 5 meters above, and 11 meters back from the river's edge. A 20-inch oak tree is about 8 meters south of the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Snag (Minnesota, Koochiching County; Jesse Hill, 1914).-On the south bank of Rainy River, about 2 miles east of the Frontier (Minn.) store. The station is on the first bench of the bank about 6 meters above and 15 meters back from the river's edge. An old barn is about 200 meters east of the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Hay (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 21/8 miles east of the Frontier (Minn.) store and just east of a section line. The station is about 8 meters above and 24 meters back from the river's edge, and is about 5 meters from the top of the slope. An old large barn is nearly due south, across the river from the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Blossom (Minnesota, Kcochiching County; Jesse Hill, 1914) .-- On the south bank of Rainy River, about 2% miles east of the Frontier (Minn.) store. The station is on a low bench about 2 meters above and 6 meters back from the river's edge. An old large barn bears west by south about 200 meters from the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Cameron (Ontario, Rainy River District; Jesse Hill, 1914) .- On the north bank of Rainy River, about 1% miles west of the Boucherville (Ontario) post office. The station is on a slope of the bank about 5 meters above and 6 meters back from the river's edge, and about 3 meters below a pile of rock. Cameron's house bears east-northeast about 90 meters from the station.

Station mark: A bronze disk set in concrete.

Blank (Minnesota, Koochiching Courty; Jesse Hill, 1914).-On the south bank of Rainy River, about 1¼ miles west of the Boucherville (Ontario) post office. The station is about 8 meters above and 18 meters back from the river's edge and about 50 meters east of a section line. Cameron's house bears north-northwest across the river from the station.

Station mark: A bronze disk set in concrete.

Joe (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about seveneighths mile west of the Boucherville (Ontario) post office. The station is on a small bench about 3 meters square, about 3 meters above, and 4 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Weed (Minnesota, Koochiching County; Jesse Hill, 1914).-On the south bank of Rainy River, about 1 mile west of the Boucherville (Ontario) post office and about 200 meters west of the mouth of McCloud Creek. The station is on the top of a slope about 9 meters above and 21 meters back from the river's edge. A house is about 140 meters east of the station.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Fire (Minnesota, Koochiching County; Jesse Hill, 1914).-On the south bank of Rainy River, about threes fourths mile west of the Boucherville (Ontario) post office. The station is about 8 meters above and 11 meterback from the river's edge, and about 15 meters west of a small creek.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Farm (Ontario, Rainy River District; Jesse Hill, 1914).-On the north bank of Rainy River, about fiveeighths mile west of the Boucherville (Ontario) post office. The station is on a bench about 2 meters above and 5 meters back from the river's edge. An old farm-implement shed is about 12 meters east of the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Brindle (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about one-half mile west of the Boucherville (Ontario) post office. The station is about 9 meters above and 18 meters back from the river's edge and about 200 meters west of Brindle's house.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Mullen (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 500 meters west of the Boucherville (Ontario) post office. The station is about 1 meter above and 2 meters back from the river's edge, and about 6 meters west of a small creek.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Bilyew. (See description of reference monument 137.)

**Vipont** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 175 meters east of the Boucherville (Ontario) post office, which is Vipont's house. The station is on a bench about 3 meters above and 5 meters back from the river's edge. It is about 8 meters west of a small gulch.

Station mark: A bronze disk set in concrete.

Charlie (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, opposite Boucherville, Ontario, and about 30 meters east of Charlie Kennedy's store. The station is about 11 meters above and 18 meters back from the river's edge.

Station mark: A bronze disk set in concrete.

**Bare** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about three-eighths mile southwest of the Boucherville (Ontario) post office. The station is about 2 meters above and 3 meters back from the river's edge and is in a swale in the bank.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Del. (See description of reference monument 138.)

**Muldoon** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about one-half mile east of the Boucherville (Ontario) post office and about one-fourth mile west of an island. The station is at the base of an 8-meter bank and south of a small cabin belonging to Mr. Muldoon. It is about 2 meters above and 2 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Oster (Ontario, Rainy River District; Jesse Hill, 1914).—On the south side near the west end of an island in Rainy River, about two-thirds mile east of the Boucherville (Ontario) post office. The station is about one-third meter above and 2 meters back from the river's edge, between a willow and an oak tree.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Obil (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 15% miles west of Birchdale Landing, Minn. The station is a little west of a rounded point and about 15 meters west of a fence running to the river. McLoud's house bears north by west across the river from the station. Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Isle (Ontario, Rainy River District; Jesse Hill, 1914).—On a sandy projection on the west end of a large island in Rainy River, about 1 mile east of the Boucherville (Ontario) post office. The station is about one-third meter above the water.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire. Reference monument 140 is 39.79 meters east of the station.

McLoud (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1¾ miles west of Birchdale Landing, Minn., and about one-fourth mile east of the east end of a large island in the river. It is on a low bank about 2 meters above and 2 meters back from the river's edge. McLoud's house is about 150 meters northeast of the station.

Station mark: A bronze disk set in concrete.

**Boy** (Ontario, Rainy River District; Jesse Hill, 1914).—On the north bank of Rainy River, about 1% miles west of Birchdale Landing, Minn., and about one-half mile east of a large island in the river. The station is on the Indian reserve about 150 meters east of the southwest corner.

Station mark: A cross cut in a stone. Subsurface mark is a ball of wire.

Curve. (See description of reference monument 141.)

**Peal** (Minnesota, Koochiching County; Jesse Hill, 1914).—On the south bank of Rainy River, about 1 mile west of Birchdale Landing, Minn. The station is at a cedar-pole landing about 70 meters west of the line between sections 32 and 33, township 160 north, range 27 west, about 1 meter above and 2 meters back from the river's edge.

Storm. (See description of reference monument 142.)

Break. (See description of reference monument 143.)

Nito (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about one-half mile west of Birchdale Landing, Minn., and about 70 meters west of the mouth of a small creek. The station is at the edge of a clearing, about 2 meters above and 3 meters back from the river's edge. A house occupied by an Indian named Nito is about 275 meters distant from the station.

Station mark: A bronze disk set in concrete.

Howard. (See description of reference monument 144.)

Birchdale West Base (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River 253 meters west of the northwest corner of the old Birchdale (Minn.) post office. The station is about 3 meters from the river's edge and about 3 meters from several ash trees.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete post 1 foot square.

Parson. (See description of reference monument 145.)

**Birchdale East Base** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 2 meters north of the northwest corner of the old Birchdale (Minn.) post office and about 6 meters from the river's edge.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Tar (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about onehalf mile east of Birchdale Landing, Minn., and just opposite the west end of a wooded island. The station is about 3 meters above and 5 meters back from the river's edge and about 2 meters from a fence line. It is about 60 meters southwest of an Indian house covered with tar paper.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Cave. (See description of reference monument 146.)

**Spawn** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about four-fifths mile east of Birchdale Landing, Minn. The station is on a projecting point of the shore line on a large rock, about 3 meters from the river's edge. It is about 15 meters east of a fish house and 9 meters from a breakwater.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" cemented in the rock.

Lean. (See description of reference monument 148.)

Rough (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1½ miles east of Birchdale Landing, Minn., and about one-half mile below the head of Long Sault Rapids. The station is on a projecting point of a rocky bluff about 8 meters above the water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" cemented in the rock.

Cochran (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1¾ miles east of Birchdale Landing, Minn. The station is on a rocky point about 180 meters west of the west end of an island about 140 meters long near the United States shore.

Station mark: A cross cut in the rock.

Tom. (See description of reference monument 150.)

Muck. (See description of reference monument 152.)

**Right.** (See description of reference monument 153.)

Left. (See description of reference monument 154.)

Cat. (See description of reference monument 156.)

Dog. (See description of reference monument 155.)

Colt. (See description of reference monument 157.)

Frame (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-half mile east of the head of Long Sault Rapids. The station is on a small, low, prominent rocky point, just above high-water mark.

Station mark: A cross cut in a rock.

**Rod** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about three-fourths mile east of the head of Long Sault Rapids and about 60 meters west of the mouth of Sturgeon River. A leaning ash tree is about 9 meters east of the station.

Ogren. (See description of reference monument 158.)

(See description of reference monument 159.) Plumb.

Olsen. (See description of reference monument 160.)

Gun (Ontario, Rainy River District; E. R. Martin, 1913) .- On the north bank of Rainy River, about 11/2 miles east of the head of Long Sault Rapids. The station is near high-water mark on one of several large rocks imbedded in the sand.

Station mark: A cross cut in the rock.

Pistol. (See description of reference monument 161.)

Muir (Ontario, Rainy River District; E. R. Martin, 1913).-On the north bank of Rainy River, about 2 miles east of the head of Long Sault Rapids and 11/2 miles west of Barwick, Ontario. The station is about 2 meters northeast of a frame house owned by William Muir. It is about 6 meters above the water. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Square. (See description of reference monument 162.)

Dan (Minnesota, Koochiching County; E. R. Martin, 1913) .-- On the south bank of Rainy River, about 1 mile west of Barwick, Ontario. The station is across the river from D. Smith's house and is about one-half meter above the water level.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Westover (Ontario, Rainy River District; E. R. Martin, 1913) .- On the north bank of Rainy River, about three-fourths mile west of Barwick, Ontario, in a field on the farm of W. J. Westover about 140 meters west of his house. The station is about 6 meters above the water and about 2 meters from a field fence, near a gate. Station mark: A cross cut in a solid rock.

Hansen. (See description of reference monument 163.)

Hartley. (See description of reference monument 164.)

Rondo (Minnesota, Koochiching County; E. R. Martin, 1913) .- On the south bank of Rainy River, about one-half mile west of the Manitou (Minn.) post office, and opposite the west end of a long sandy island. The station is at the edge of the woods, about 1 meter above high-water mark and about 28 meters east of the sectionline road.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Watts. (See description of reference monument 166.)

Office. (See description of reference monument 165.)

Bat (Minnesota, Koochiching County; E. R. Martin, 1913) .- On the south bank of Rainy River, about 300 meters east of the Manitou (Minn.) post office. The station is near high-water mark.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Feron (Ontario, Rainy River District; E. R. Martin, 1913).-On the north bank of Rainy River, about five-eighths mile east of Barwick, Ontario. The station is on the upper bank of the river, next to a field, and about 7 meters above the water.

Station mark: A cross cut in a stone.

Wick. (See description of reference monument 167.)

Bar (Ontario, Rainy River District; E. R. Martin, 1913) .- On the north bank of Rainy River, about three-fourths mile east of Barwick, Ontario. The station is on the property of Mr. Feron, near a field fence, and about 100 meters east of his house. It is about 2 meters above the water.

Station mark: A cross cut in solid granite rock.

Fern (Ontario, Rainy River District; E. R. Martin, 1913) .- On the north bank of Rainy River, about 1% miles east of Barwick, Ontario. The station is in the edge of the brush and about 45 meters south from a log house. It is near high-water level.

Station mark: A cross cut in a granite outcrop, near a larger black rock. Reference monument 168, an 8-inch manganese-bronze post, is 39.44 meters northeast of the station.

Bow (Minnesota, Koochiching County; E. R. Martin, 1913).-On the south bank of Rainy River, about 1 mile east of the Manitou (Minn.) post office. The station is in the brush and burnt timber and about 2 meters above the water. A log house on the Canadian shore is opposite the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Lock (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1 mile east of the Manitou (Minn.) post office. The station is at high-water mark and will probably be lost during a high stage of the river.

Station mark: A cross cut in a stone. Subsurface mark is a bottle. Reference monument 169, an 8-inch manganese-bronze post set in concrete, is 34.37 meters south of the station.

**Beaver** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about  $1\frac{1}{2}$  miles east of Barwick, Ontario, and about 150 meters east of the mouth of Sims Creek. The station is at the edge of the timber and about 2 meters above high-water mark.

Station mark: A cross cut in a stone. Subsurface mark is a bottle. Reference monument 170, an 8-inch manganese-bronze post set in concrete, is 20.12 meters north of the station.

**Know** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1% miles east of the Manitou (Minn.) post office and about 325 meters east of the mouth of Burton Creek. The station is nearly on a level with the water, at a place where the river bank is steep. There is a log roll near the station.

Station mark: A cross cut in a stone. Subsurface mark is a bottle. Reference monument 171, an 8-inch manganese-bronze post set in a concrete base, is 31.96 meters southwest of the station.

Stimson (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1¾ miles east of Barwick, Minn., and about 425 meters east of the mouth of Sims Creek. The station is on the property of Mr. Stimson, about 120 meters west of his house. It is on a slope about 1 meter above the water. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Woodward (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1 mile west of Manitou Rapids. The station is on a sandy stretch of the shore and about 45 meters from a clearing on the property of Mr. Woodward.

Station mark: A cross cut in a stone.

Lewis. (See description of reference monument 173.)

Paddle (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about three-eighths mile west of Manitou Rapids. The station is on a grassy flat about two-thirds meter above the water.

Station mark: A cross cut in a large flat-topped rock.

Over. (See description of reference monument 175.)

Canoe. (See description of reference monument 176.)

Mound (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, overlooking Manitou Rapids and an Indian village. The station is on top of an old Indian mound. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Rapid. (See description of reference monument 177.)

McGauley (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about five-eighths mile east of Manitou Rapids. The station is on a flat covered by water at flood stages, on the property of Mr. McGauley and about 15 meters east of a fence.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Hunt (Ontario, Rainy River District; E. R. Martin, 1913) —On the north shore of Rainy River, about three-fourths mile east of Manitou Rapids. The station is at the river's edge near high-water mark. Station mark: A cross cut in a round-topped rock.

Flat. (See description of reference monument 179.)

**Donovan** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1 mile east of Manitou Rapids, about 1½ miles west of the Indus (Minn.) school, and opposite a long narrow island lying near the shore. The station is on the property of Mr. Donavan, at the edge of a field, about 8 meters above and 30 meters back from the river's edge. The ruins of an old sawmill are just east of the station and a new sawmill is about one-eighth mile west. A fence is about 18 meters west of the station.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Lang (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1% miles east of Manitou Rapids and about 1 mile west of the Indus (Minn.) school. The station is on the property of George Lang, about 50 meters east of the section line between sections 5 and 6, township 160 north, range 25 west, and just above high-water mark.

Spring. (See description of reference monument 180.)

Yellow (Ontario, Rainy River District; E. R. Martin, 1913).—On the Canadian shore of Rainy River, about seventh-eighths mile west of the Indus (Minn.) school and about 200 meters west of the southeast corner of the Indian reservation. The station is near the water's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

George. (See description of reference monument 181.)

Shut (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about three-eighths mile northwest of the Indus (Minn.) school. The station is in front of Benjamin Wilcox's house, near high-water mark, and about 10 meters from a very large rock.

Station mark: A cross cut in a flat rock nearly level with the ground. Reference monument 182, an 8-inch manganese-bronze post set in a concrete base, is 30.70 meters north of the station.

Steel (Minnesota, Koochiching County; E. R. Martin, 1913.)—On the south bank of Rainy River, about 550 meters west of the Indus (Minn.) school and about 270 meters east of the mouth of a small creek. The station is near the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Sunder. (See description of reference monument 183.)

**Rail** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 450 meters northeast of the Indus (Minn.) school and about one-half mile west of the mouth of Rice's Creek. The station is near the river's edge and about 45 meters east of a fence line.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a large rock.

**Thompson** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about five-eighths mile west of the hotel in Emo, Ontario, and about one-fourth mile west of a sawmill owned by W. J. Thompson. The station is near the river's edge and is about 120 meters west of the mouth of Rice Creek.

Station mark: A cross cut in a round-topped rock.

Ash (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-half mile west of the Indus (Minn.) store. The station is opposite the sawmill of W. J. Thompson and is near the northeast corner of a clearing in front of Alex Snyder's house.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

**Emo West Base** (Ontario, Rainy River District; E. R. Martin, 1913; 1925).—On the north shore of Rainy River in the western part of Emo, Ontario. The station is about 10 meters above the water, back of the Canadian National Railways pump house. It is distant from the pump house 17.68 meters from the northeast corner, 14.70 meters from the northwest corner, and 18.35 meters from the southwest corner.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" cemented in the rock. Reference monument 184, an 8-inch manganese-bronze post set in concrete, is 1.49 meters southwest of the station.

Land (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-half mile west of the Indus (Minn.) store. The station is on a sand bank opposite the pump house of the Canadian National Railways.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

**Emo East Base** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, on the main street of Emo, Ontario, near the post office. The station is 30 meters from the southwest corner of the post office, 21.77 meters from the southeast corner of the adjoining building, and 20.05 meters from the southeast corner of the adjoining building.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a rock nearly level with the ground.

Crook. (See description of reference monument 186.)

Boucher. (See description of reference monument 187.)

Shanks (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 90 meters southeast of the Indus (Minn.) wharf.

Station mark: A cross cut in a rock ledge near the water's edge.

**Durand** (Minnesota, Koochiching County; E. R. Martin; 1913).—On a small island in Rainy River near the west shore and about five-eighths mile southeast of Indus, Minn. The station is on the northeastern part of the island, on the property of John Durand. It is just above the water and about 5 meters southwest of a large flat rock.

**Extra** (Ontario, Rainy River District; E. R. Martin, 1913; 1918).—On the east bank of Rainy River about 1½ miles downstream from the Emo (Ontario) hotel. The station is near the shore line on the property of Thomas Shortrede about 90 meters northwest of his house.

Station mark: A bottle buried in the ground with a rock marked with a cross placed over it.

Vega. (See description of reference monument 189.)

Shortrede (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about 1½ miles downstream from Emo, Ontario. The station is on the bank below high-water mark, and is a little upstream from Smoot Island. It is on the property of Thomas Shortrede.

Station mark: A bottle buried in the ground and a rock, marked with a cross, placed over it.

Steer (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about 2 miles below the Emo (Ontario) hotel, about three-fourths mile south of Smoot Island, and about three-fourths mile north of Conmee Island. The station is on a grassy slope on the property of Alex Luttrell, about 4 meters above the river.

Station mark: A cross cut in a stone. Subsurface mark is a bottle

McComb. (See description of reference monument 190.)

Boat. (See description of reference monument 191.)

Taylor (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west bank of Rainy River, about 2¾ miles south of the Emo (Ontario) hotel and opposite the north end of Conmee Island. The station is about 40 meters north of the mouth of a small stream on the property of Mr. Taylor, near the river's edge, and is submerged at high water.

Station mark: A cross cut in a stone measuring about 0.6 by 1 meter in cross section.

Brown (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about 2¾ miles south of the Emo (Ontario) hotel and opposite the north end of Conmee Island. The station is on a hillside on the property of Frank Brown. It is about 6 meters above and 18 meters back from the river's edge. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

**Dock** (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about  $3\frac{1}{2}$  miles south of the Emo (Ontario) store and about one-fourth mile south of the south end of Conmee Island. The station is below high-water mark and on the property of Mr. Redden.

Station mark: A cross cut in a granite rock about 1 by 0.6 by 0.5 meter in size.

Green (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west bank of Rainy River, about 35% miles south of the Emo (Ontario) hotel and about 530 meters south of the south end of Conmee Island. The station is about 1 meter above and 2 meters back from the river's edge, on the property of Mr. Morceau. It is about 150 meters south of the mouth of a small stream.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete block 1 foot square.

**Cow** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west bank of Rainy River, about 4 miles south of the Emo (Ontario) hotel and about three-fourths mile south of the south end of Conmee Island. The station is about 9 meters above and 30 meters back from the river's edge, on top of the bank at the northeast corner of a clearing.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Uncle. (See description of reference monument 194.)

**Paul** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the United States shore of Rainy River, about 4½ miles south of the Emo (Ontario) hotel. The station is near the top of the river bank, about 9 meters above and 30 meters back from the river's edge. It is in a cultivated field, the property of Mr. Morceau, and near the end of the cast-and-west section-line road between sections 23 and 26.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Francois. (See description of reference monument 195.)

Edge (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about 1 mile north of the Aylesworth (Ontario) post office. The station is at the river's edge, about opposite a rock in the middle of the river and about 120 meters north of a section line.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Hard (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west bank of Rainy River, about three-fourths mile north of the Aylesworth (Ontario) post office. The station is near the river's edge, about 300 meters north of the south line of section 26.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Swan. (See description of reference monument 197.)

Leaf (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west bank of Rainy River, about one-eighth mile south of the Aylesworth (Ontario) post office and about 60 meters south of the mouth of a small stream. The station is near the river's edge.

Station mark: A cross cut in a stone.

Linquist. (See description of reference monument 198.)

Red (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west shore of Rainy River, about one-fourth mile south of the Aylesworth (Ontario) post office. The station is at the river's edge, below high-water mark, on the property of Mr. Degraw. It is about 175 meters south of the mouth of a small stream and about 250 meters north of the line between townships 158 and 159 north.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Luttrell (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about three-eighth mile south of the Aylesworth (Ontario) post office and about 100 meters north of the mouth of a small stream. The station is on the edge of a bank about 7 meters above and 40 meters back from the river's edge, in a meadow. A large jack pine tree is about 90 meters south of the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete block about 1 foot square.

Degraw. (See description of reference monument 199.)

**Tree** (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, about onehalf mile north of the Loman (Minn.) school. The station is about 2 meters above the river, on the property of H. W. Ogden, and southwest of a small house.

Station mark: A cross cut in a flat stone. Subsurface mark is a bottle.

Kennedy (Minnesota, Koochiching County; E. R. Martin, 1913).—On the west bank of Rainy River, about three-eighths mile north of the Loman (Minn.) school. The station is about 3 meters above the river, on F. W. Kennedy's property.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Tip. (See description of reference monument 200.)

School. (See description of reference monument 201.)

**Pass** (Ontario, Rainy River District; E. R. Martin, 1913).—On the east bank of Rainy River, opposite the Loman (Minn.) school. The station is about 8 meters above and 30 meters back from the river's edge on a high bank on the property of H. J. Ogden.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

McIntosh. (See description of reference monument 202.)

Ogden (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about three-fourths mile northwest of the mouth of Black River, at Loman, Minn. The station is about 250 meters southeast of Mr. Ogden's house and about 70 meters west of the edge of the woods. It is about 8 meters above and 15 meters back from the river's edge.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Shore. (See description of reference monument 203.)

Mistake (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, opposite and slightly west of the hoisting plant at Loman Station, Minn. The station is about 30 meters southeast of an old log house and near a path parallel to the river. It is about 5 meters above the river.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Metcalf. (See description of reference monument 204.)

Tepee. (See description of reference monument 205.)

Armstrong. (See description of reference monument 206.)

Simp. (See description of reference monument 207.)

Lumber (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1¼ miles east of the mouth of Black River, at Loman, Minn., and opposite the lower part of Watrous Island. The station is on lot 17, River Range, and at the river's edge below high-water mark.

Station mark: A cross cut in a flat rock. Subsurface mark is a bottle.

Lamb (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1<sup>3</sup>/<sub>4</sub> miles east of the mouth of Black River, at Loman, Minn. The station is about 7 meters above the river and

about 5 meters north of the top of the bank. It is about 90 meters west of the line between lots 14 and 15, River Range, and about 20 meters southwest of a house.

Station mark: A cross cut in a rock about 1 foot square.

Field (Minnesota, Koochiching County; E. R. Martin, 1913).—On Watrous Island, in Rainy River, about 1¾ miles east of the mouth of Black River, at Loman, Minn. The station is about 270 meters west of the eastern end of the island, about 1 meter from the edge of the bank and 3 meters above high-water mark. Station mark: A cross cut in a flat stone.

Clark. (See description of reference monument 208.)

Main (Minnesota, Koochiching County; E. R. Martin, 1913).—In the southern part of the channel of Rainy River, about  $1\frac{1}{2}$  miles west of the mouth of Big Fork River. The station is on the most eastern of four piers in the river, on a 50-pound stone placed about 1 meter from the northwest corner.

Station mark: A cross cut in the stone.

Slope (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about three-fourths mile west of the mouth of Big Fork River. The station is about halfway up the river bank, about 4 meters above the water. It is about 30 meters west of the line between lots 7 and 8, River Range, on the property of Mr. Aylesworth.

Station mark: A cross cut on a reddish stone about the size of a loaf of bread.

High. (See description of reference monument 209.)

Sand (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, on the point at the east side of the mouth of Big Fork River. The station is below high-water mark, on a round stone about 7 inches in diameter—the only stone found on the point.

Station mark: A cross cut in the stone.

Fence. (See description of reference monument 210.)

Vine (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about three-fourths mile east of the mouth of Big Fork River, opposite and about 100 meters upstream from the dock at Laurel, Minn. The station is about 6 meters above and 20 meters back from the river's edge and about 3 meters south of a fence

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete block about 1 foot square.

**Fred.** (See description of reference monument 213.)

Henry (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the north bank of Rainy River, about three-fourths mile west of Big Fork, Ontario. The station is on the property of Alex Henry, about 50 meters west of his house and just outside his field fence. It is about 8 meters above and 20 meters back from the river's edge.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete block about 1 foot square.

**Bull** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-half mile west of Big Fork, Ontario, and about 1 mile east of the Laurel (Minn.) wharf. The station is at the edge of the timber, just above high-water mark.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Hotel, 1913 (Ontario, Rainy River District; E. R. Martin, 1913).—On the Canadian shore of Rainy River in the town of Big Fork, Ontario. The station is on top of the hotel owned by Patrick O'Connell.

Station mark: The top of the flagpole on the roof.

Anderson (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, across from Big Fork, Ontario. The station is on a high bank about 9 meters above and 20 meters back from the river's edge. A black poplar tree is about 1 meter northwest of the station.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Spencer. (See description of reference monument 215.)

Mac (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about three-fourths mile east of Big Fork, Ontario. The station is on the property of Thomas McKinstry, about 65 meters northeast of his house. It is about 4 meters above the water.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Burnt. (See description of reference monument 216.)

**Frasier** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1¼ miles east of Big Fork, Ontario, and about 150 meters east of a north-and-south section-line road. The station is in a field on the property of Duncan Frazier, about 50 meters east of an old wharf. It is about 1 meter above and 10 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Law (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1½ miles east of Big Fork, Ontario, about one-half mile southwest of the mouth of La Vallee River, and about 130 meters southwest of the mouth of a small creek. The station is about 2 meters above and 6 meters back from the river's edge.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Dun. (See description of reference monument 217.)

Plain. (See description of reference monument 218.)

Walton (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 320 meters northeast of the mouth of La Vallee River. The station is on the property of Mr. Walton, at the south edge of the woods. It is about 7 meters above and 10 meters back from the river's edge. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Clay (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about three-eighths mile east of the mouth of La Vallee River. The station is at the edge of the timber, near the river's edge and about 3 meters above the water.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Ward. (See description of reference monument 219.)

**Point.** (See description of reference monument 220.)

Cad (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River about fiveeighths mile upstream from the mouth of La Vallee River. The station is in George Ward's barnyard, directly south of his house. It is about 2 meters above and 10 meters back from the river's edge. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Station mark. It closs cut in a stone. Subsultace mark is a both

Move. (See description of reference monument 222.)

Certes (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River about 1¼ miles downstream from the mouth of Little Fork River. The station is on the edge of a field on the property of John Certes. It is about 3 meters above the water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Cadden (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the south bank of Rainy River, about seven-eighths mile downstream from the mouth of Little Fork River and about 420 meters east of the line between range 25 and range 26 west. The station is on the property of W. R. Cascadden, in the northeast corner of his field along the river. It is about 3 meters above the water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete.

Peter. (See description of reference monument 223.)

Cass. (See description of reference monument 224.)

Reserve (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about three-fourths mile downstream from the mouth of Little Fork River and about one-half mile east of the west line of an Indian reservation. The station is about 35 meters south of a house and nearly at the water's edge. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

**Boom** (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about three-fifths mile downstream from the mouth of Little Fork River. The station is near some bushes and below high-water mark.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Indian. (See description of reference monument 225.)

Ran (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-fourth mile downstream from the mouth of Little Fork River. The station is about 280 meters west of the section line between sections 29 and 30, near some timber at the edge of the river and below high-water mark. Station mark: A cross cut in a stone. Subsurface mark is a bottle.

96030-31-35

Turn (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-fourth mile downstream from the mouth of Little Fork River. The station is at the river's edge, below high-water mark.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Chief (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, opposite the west end of a small sandy island lying off the mouth of Little Fork River. The station is about 8 meters above and 18 meters back from the river's edge. Several Indian graves are about 20 meters northwest of the station.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Run (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about one-third mile downstream from the mouth of Little Fork River. The station is below high-water mark, near some timber.

Station mark: A cross cut in a rock with a bottle buried under it.

Fork (Minnesota, Koochiching County; E. R. Martin 1913).—On the south bank of Rainy River a short way downstream from a small sandy island lying off the mouth of Little Fork River. The station is near the edge of the river below high-water mark.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Little. (See description of reference monument 226.)

Hathway (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, opposite and about 300 meters east of the mouth of Little Fork River, about 130 meters west of the east line of Indian Reservation No. 10 and about 100 meters east of the mouth of a small creek. The station is about 9 meters above and 30 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Watrous. (See description of reference monument 227.)

Bowen. (See description of reference monument 228.)

Stick (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the south bank of Rainy River, about 1 mile east of the mouth of Little Fork River. The station is at the river's edge, below high-water mark. Station mark: A cross cut in the solid rock.

Hammer (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the south bank of Rainy River, about 1½ miles east of the mouth of Little Fork River. The station is at the river's edge, below high-water mark.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in solid rock.

Grove. (See description of reference monument 229.)

Roll (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the south bank of Rainy River, about 1¼ miles east of the mouth of Little Fork River. The station is about 150 meters west of a clearing on which there is a house. It is at the river's edge, below high-water mark.

Station mark: A cross cut in the solid rock.

Axe. (See description of reference monument 230.)

Sheep (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about three-fourths mile west of the Isherwood (Ontario) post office, and about three-eights mile west of Wilson Creek. The station is in a pasture on the property of Alfred McPhee, about 40 meters east of the section line and about 8 meters above and 20 meters back from the river's edge. It is 61.6 meters from the southwest corner of a house, 64.1 meters from the northwest corner, and 66.4 meters from the southeast corner.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete block about 1 foot square.

Saw. (See description of reference monument 231.)

Drill (Minnesota, Koochiching County; E. R. Martin, 1913; 1926).—On the United States shore of Rainy River, about five-eighths mile west of the Isherwood (Ontario) post office. The station is at the river's edge, below high-water mark, at a point about 50 meters west of the mouth of a small stream.

Station mark: A drill hole within a triangle cut in a large, round-topped rock.

Small. (See description of reference monument 233.)

Isherwood. (See description of reference monument 232.)

Stiller (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1 mile east of the Isherwood (Ontario) post office. The station is on a lawn in front of John Stiller's house, about 9 meters above and 30 meters back from the river's edge. It is 5.6 meters from the northwest corner of Stiller's house, 12.6 meters from the southwest corner, 9.4 meters from the northeast corner.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in a concrete block about 1 foot square.

Beach. (See description of reference monument 234.)

Twig. (See description of reference monument 235.)

Jackson (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 1¾ miles east of the Isherwood (Ontario) post office, and about 60 meters west of a small creek that flows into the river at the termination of the line between range 25 and range 24. The station is on the property of George Shaw, about one-fourth mile up the river from his house. It is near the river's edge, about 3 meters above the water.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in a concrete block about 1 foot square.

Berry. (See description of reference monument 238.)

Elm (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 6½ miles downstream from the dam at Fort Frances, Ontario, and just west of where the river turns from a southerly to a westerly course. The station is about 150 meters west and 300 meters south of the angle of the river road, where it turns from south to west. It is in a field on Mr. Lowe's property, about 200 meters west of the mouth of a small stream. It is about 6 meters above and 40 meters back from the river's edge. Four elm trees are near the station, as follows: One 36.9 meters southwest, one 34.5 meters southwest, one 30.8 meters southeast, and one 31.0 meters southeast. Station "Timothy" is about 80 meters east of it.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Timothy (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 6½ miles downstream from the dam at Fort Frances, Ontario. The station is in a field on the property of Mr. Lowe, about 100 meters west of the mouth of a small stream. It is about 6 meters above and 50 meters back from the river's edge. Two elm trees are southeast of the station, one 44 meters and the other 58 meters distant. Station "Elm" is about 80 meters west of it.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Woods (Ontario, Rainy River District; E. R. Martin, 1913).—On the west bank of Rainy River, about 6¼ miles downstream from the dam at Fort Frances, Ontario, and about 360 meters east of the turn of the river road from south to west. The station is at the northeast end of a timber tract, on the property of Alfred Wilson. It is about 9 meters above and 25 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Rasp. (See description of reference monument 239.)

Bush. (See description of reference monument 241.)

Wilson. (See description of reference monument 240.)

Clover (Ontario, Rainy River District; E. R. Martin, 1913).—On the west shore of Rainy River, about 5½ miles downstream from the dam at Fort Frances, Ontario, and about 330 meters north of the mouth of a small creek. The station is in a field about 100 meters south of the township line. It is about 10 meters above and 40 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Creek (Minnesota, Koochiching County; E. R. Martin, 1913).—On the east bank of Rainy River, about 5½ miles downstream from the dam at International Falls, Minn., about 330 meters north of the south line of section 8, township 70 north, range 24 west, and about 30 meters south of the mouth of a small stream. The station is at the edge of the timber on a high bank about 5 meters above and 10 meters back from the river's edge. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a concrete block about 1 foot

square.

Hole. (See description of reference monument 242.)

Cut (Ontario, Rainy River District; E. R. Martin, 1913).—On the west bank of Rainy River, about 5½ miles downstream from the dam at Fort Frances, Ontario, and about 300 meters south of the mouth of a small creek. The station is in the woods, about 5 meters above and 20 meters back from the river's edge.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

**Open.** (See description of reference monument 243.)

Log (Minnesota, Koochiching County; E. R. Martin, 1913).—On the United States shore of Rainy River, about 4 miles downstream from the dam at International Falls, Minn., about 380 meters north of the south line of section 5, township 70 north, range 24 west, and about 80 meters south of the mouth of a small creek. The station is near the river's edge, about 1 meter above the water.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

Swede (Ontario, Rainy River District; E. R. Martin, 1913; 1926).—On the west bank of Rainy River, about 4 miles downstream from the dam at Fort Frances, Ontario. The station is on the property of Albert Haney, 27.9 meters from the southeast corner and 34.4 meters from the southwest corner of Angelo Marlson's house. It is about 12 meters above and 40 meters back from the river's edge.

Station mark: A drill hole within a triangle cut in solid rock.

Third. (See description of reference monument 245.)

Short. (See description of reference monument 246.)

Gillian (Ontario, Rainy River District; E. R. Martin, 1913; 1926.)—On the north bank of Rainy River, on the big bend of the river 3 miles downstream from the dam at Fort Frances, Ontario, and about midway between a small wharf to the west and the mouth of a small stream to the east. The station is near a grove of trees and about 100 meters southeast of Mr. Gillian's house. It is near the river's edge, about 1 meter above the water.

Station mark: A cross cut in a stone. Subsurface mark is a glass jar.

Wire (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, in the big bend of the river 3 miles downstream from the dam at International Falls, Minn. The station is about 30 meters northeast of the northwest corner of section 5, township 70 north, range 24 west, near the river's edge and about 4 meters above the water. It is between two large red oak trees.

Station mark: A cross cut in a stone. Subsurface mark is a bottle.

English. (See description of reference monument 247.)

Cedar (Minnesota, Koochiching County; E. R. Martin, 1913).—On the south bank of Rainy River, about 2½ miles downstream from the dam at at International Falls, Minn. The station is near several cedar trees and about 2 meters above high-water mark.

Station mark: A cross cut in a granite stone. Subsurface mark is a glass jar.

**Dump.** (See description of reference monument 249.)

Stone (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1% miles downstream from Fort Frances, Ontario, and about 170 meters below the mouth of a creek. The station is about 3 meters above and 10 meters back from the river's edge. A dumping ground on the United States shore is nearly opposite the station.

Station mark: A drill hole in a stone. Subsurface mark is a bottle.

**Pop** (Ontario, Rainy River District; E. R. Martin, 1913).—On the north bank of Rainy River, about 1% miles downstream from the dam at Fort Frances, Ontario, and about 90 meters below the mouth of a creek. The station is on the last point of the north bank of the river visible from the first rocky island below Fort Frances. It is about 1 meter above the water.

Station mark: A drill hole in a rock about 8 by 10 inches in size.

Fish. (See description of reference monument 250.)

National. (See description of reference monument 252.)

Falls. (See description of reference monument 251.)

Rock. (See description of reference monument 257.)

Koochiching Court House (Minnesota, Koochiching County; F. E. Ryus, 1913).—In the town of International Falls.

Station mark: The flagpole on the tower of the Koochiching County court house.

U. S. G. S. Bench Mark. (See description of reference monument 254.)

**River.** (See description of reference monument 255.)

Bridge. (See description of reference monument 256.)

Cabin. (See description of reference monument 258.)

Transformer. (See description of reference monument 260.)

Jamison. (See description of reference monument 261.)

Muskrat. (See description of reference monument 263.)

Canoe. (See description of reference monument 262.)

Hubbard. (See description of reference monument 264.)

## RANIER, MINN., TO CURTAIN FALLS, MINOR SCHEMES

Rainy Lake 2. (See description of reference monument 268.)

Rainy Lake 3. (See description of reference momument 267.)

Rainy Lake 1. (See description of reference monument 266.)

Rainy Lake 5 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, about 2¼ miles northeast of Rainer, Minn., on the south side of the most southern of the group of islands to the southeast of Squall Point. It is about 1.5 meters above the level of the lake and about 3 meters from the water's edge. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 6 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, about 3 miles east of Rainer, Minn., on the north end of the long narrow island which lies just north of Crystal Beach. It is about 3 meters above the lake level and about 6 meters from the north shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 7 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, about 3½ miles northeast of Ranier, Minn., on the southwest point of Lost Island. It is about 1 meter above the lake level and about the same distance from the water's edge.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 12. (See description of reference monument 272.)

**Rainy Lake 10** (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, about 6 miles east of Ranier, Minn., on the small bare rocky island which is about 1 mile northeast of the Fransen Islands, about 220 meters south of a small timbered island and about 60 meters east of a small rocky island. The island on which the station is located measures about 60 meters from north to south and about 10 meters from east to west. The station is on the highest point of the island, about 2 meters above the water and 1.5 meters west of a pine stump.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge.

Rainy Lake 8. (See description of reference monument 269.)

Rainy Lake 11 (Minnesota, Koochiching County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, about 6½ miles east of Ranier, Minn., on the small high island just north of the middle of Jackfish Island. It is on the highest part of the north end of the island, about 7 meters above the lake level, about 30 meters from the west shore, 45 meters from the north shore, and 15 meters from the east shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete in the sandstone ledge.

Rainy Lake 9. (See description of reference monument 270.)

Rainy Lake 29 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, about 6½ miles east of Rainer, Minn., on the southern point of a large island about one-half mile northwest of Eightmile Island and about 1½ miles west of Dunsmore Island. The station is about 45 meters due west of a very small island; is about 3 meters above the water, about 6 meters from the east shore, 15 meters from the south shore, and 12 meters from the west shore of the point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 31 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, about 6 miles east of Ranier, Minn., on the southern end of Scott Island. It is about 2.5 meters above the lake level and about 5 meters from the south shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 28. (See description of reference monument 271.)

Rainy Lake 30 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, about 6 miles east of Ranier, Minn., on the most northern of a group of 3 small islands which are about three-quarters mile north of the steamboat channel. It is on a rock projecting from the northern end of the island. It is about

15 meters north of a blazed tree which is marked "91225." It is about 1 meter above the lake level, 2 meters from the west shore, 3 meters from the north shore, and 1.5 meters from the east shore of the point. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge.

Rainy Lake 32 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, about 5½ miles east of Ranier, Minn., on a small, low, timber-covered island which is just north of the boundary line and 1¼ miles nearly due north of the Fransen Islands, with no other islands between. It is on the eastern end of the island, about 5 meters from the east shore and 1.5 meters from the north and south shores. The island is about 60 meters long and has an average width of about 30 meters.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge.

Rainy Lake 33 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, about 5½ miles east of Rainer, Minn., on a small, high, timber-covered island which is 1½ miles nearly due north of the Fransen Islands, with only one small, low island between. It is on the south end of the island, about 1.5 meters above the lake level and about 9 meters from the south shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge.

Rainy Lake 13 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on Red Sucker Island, on a timbered point on the north shore. It is about 2.5 meters above the lake level, about 15 meters from the end of the point, and 8 meters from the water on either side.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 14. (See description of "Raney (U. S. C. & G. S.)."

Rainy Lake 35. (See description of reference monument 273.)

Rainy Lake 34. (See description of reference monument 274.)

Rainy Lake 37. (See description of "Water (U. S. C. & G. S.)."

Rainy Lake 36. (See description of reference monument 275.)

Rainy Lake 17 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the extreme western tip of Angling Island and on the east side of the steamboat channel through Pine Narrows. It is on a rock whose dimensions are 1 by 1 by 2 meters, about 1.5 meters above the water surface, and about 2.5 meters from the water's edge.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the rock.

Rainy Lake 16 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the south end of the timbered island which lies about one half mile north of Pine Narrows. It is about 1.5 meters above the lake level, about 45 meters from the east shore, 1.5 meters from the south shore, and 15 meters from the west shore of the point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 15 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the northeast point of Red Pine Island and on the west side of Pine Narrows. It is about 2 meters above the lake level and about 6 meters from the north, east, and south shores of the point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 18 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a point on the east end of Red Pine Island on the west side of Pine Narrows, about 330 meters south of the end of the long narrow point on which "Rainy Lake 15" is located. It is on the first point south of the one on which there is an old cabin. The station is about 6 meters from the end of the point and about 2.5 meters from the shore on either side.

Station mark: A 2-inch bronze disk marked "U.S. & C. B. Survey" set in ledge rock.

Rainy Lake 38 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the extreme southern point of Red Pine Island. It is on the middle of the end of the flat rocky point which extends into the lake and is at the edge of some small pines. It is about 0.7 meter above the lake level and about 9 meters north of the shore line.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 39. (See description of reference monument 276.)

Rainy Lake 19 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the most southern point of Angling Island. It is about 6 meters from the south shore and 1.5 meters north of a 10-inch pine stump.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 20 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on a small narrow island which lies about 110 meters north of the northeast part of Grindstone Island and about 1¼ miles north of the entrance to Black Bay. It is on the highest point of the east end of the island, about 5 meters above the lake level, about 30 meters from the east shore and 15 meters from the north and south shores.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Grindstone (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on the east end of Grindstone Island, 1¼ miles south of Pine Narrows and 1 mile north of the entrance to Black Bay. It is on approximately the highest part of the east end of the island, about 23 meters above the lake level, about 380 meters from the extreme eastern point of the island, and about 150 meters from the north shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Dryweeds (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on the southwest end of Dryweeds Island about one half mile north of the entrance to Black Bay. It is about 12 meters above the lake level, about 49 meters from the end of the point, about 38 meters from the shore on either side, and about 114 meters southwest of an old mine shaft.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Dove (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, at the west side of the entrance to Black Bay, about 250 meters northwest of Mr. Dove's house on Dove Point. It is about 11 meters above the lake level, about 45 meters from the water's edge on the north and 60 meters from the water's edge on the east.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in bare ledge rock.

City (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on the east side of the entrance to Black Bay, about 420 meters southeast of Mr. Dove's house on Dove Point. It is on a high bald nose, about 11 meters above the lake level and about 45 meters east of the water's edge. Station mark: A 2-inch bronze disk marked ''U. S. & C. B. Survey'' set in ledge rock.

Pick (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on the west side of the entrance to Black Bay, on the point about 330 meters southwest of Mr. Dove's house on Dove Point. It is about 9 meters above the lake level, about 38 meters from the water's edge on the east and 120 meters from the water's edge on the south.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 1 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the east side of the entrance to Black Bay, at a narrow place in the channel about three-fourths mile south of Mr. Dove's house on Dove Point. It is about 1 meter above high-water mark and about 2.5 meters east of the shore line.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 2 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the peninsula on the west side of the entrance to Black Bay, about three-fourths mile south of Mr. Dove's house on Dove Point. It is on a high, sparsely timbered knoll and is about 9 meters above the lake level and about 150 meters from the shore line at the end of the peninsula.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in ledge rock.

Black Bay 3 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the west end of a small, timbered island at the south end of the narrow entrance to Black Bay near the east shore. It is about 1 meter above high water and about 5 meters east of the west shore of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 4 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on a small, low, bare island on the west side of Black Bay just inside the narrow entrance and at the tip of a marshy point. The station is about 1 meter above high water.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in ledge rock.

Black Bay 5 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the highest bare part of a large, timbered island on the east side of Black Bay, about 2½ miles south of Mr. Dove's house on Dove Point. It is about 15 meters southwest of the head of a small bay on the northwest side of the island and is about 5 meters above high water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 6 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the northwest point of a small, timbered island which measures about 60 meters northeast and southwest and about 30 meters northwest and southeast and which is about 2¼ miles south of Mr. Dove's house on Dove Point. It is about 0.6 meter above high water.

Station mark: A 2-inch bronze disk marked"U.S. & C.B. Survey" set in ledge rock

West (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the bare southeast point of a large heavily timbered island just north of the mouth of Rat Root River. It is about 1.5 meters above high water and about 5 meters west of the shore line.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 7 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on a small brushy island about 3 meters in diameter at the end of a sharp point of reeds on the south shore of Black Bay. It is about 0.3 meter above high water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 8 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on a small, timbered island about 90 meters from the south shore of Black Bay, nearly due south of Dove Point. The island measures about 30 meters northwest and southeast and about 12 meters northeast and southwest. The station is about 0.8 meter above high water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 9 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, off the north shore of the east arm of Black Bay, on the southwest point of a sparsely timbered island about 30 meters in diameter which is about 40 meters southeast of a narrow, timbered island about 260 meters long. The station is about 1 meter above high water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Black Bay 10 (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the cleared west end of a heavily timbered point on the south shore of the east arm of Black Bay. The station is about 0.3 meter above high water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Interior (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, near the middle of the east arm of Black Bay, on the highest point of a heavily timbered island which measures about 180 meters northwest and southeast and about 120 meters northeast and southwest. The station is about 4.5 meters above high water. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Tall (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the highest point of the most western of a group of islands which are off the point between the two prongs of the eastern arm of Black Bay. It is on the cleared end of a timbered point on the south shore of the island, about 3.5 meters from the shore and about 5 meters above high water.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Southeast (Minnesota, Koochiching County; F. S. Ryus, 1913).—On Rainy Lake, on the cleared end of a timbered point on the south side of a long narrow channel through the marsh in the southeast corner of Black Bay. The station is about 1 meter above high water and about 3.5 meters east of the shore line at the end of the point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 21 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, about 240 meters north of the west end of Dryweed Island, on the nearest small rock island to the south of Capstan Rock from which it is distant about one-half mile. The rock is about 6 meters wide and 18 meters long, and the station is on the highest point of the east end of the rock.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in a soft, vertically stratified ledge.

Rainy Lake 23 (Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a small rocky island about 2 miles east of American Narrows, about 300 meters south of Sand Point Island and about 350 meters north of Capstan Rock. The island is the nearest to Capstan Rock of a group of islands, and the station is near the highest point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge.

Rainy Lake 22 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on Capstan Rock, about 2 miles east of American Narrows and about 600 meters south of Sand Point Island. The rock is about 45 meters long and the station on its highest part.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the ledge.

Rainy Lake 24 (Minnesota, Koochiching County; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island about 2½ miles east of American Narrows and about 50 meters from the middle of the north shore of Dryweed Island. The island is about 80 meters wide and 100 meters long and rises about 3.5 meters above the lake level. The station is on the highest point of the island, about 38 meters from the east shore, 15 meters from the north shore, 12 meters east of the concrete foundation of an old engine bed, and 38 meters northeast of a mine shaft.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 25 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the most southern point of Sand Point Island, about 1 mile east of Capstan Rock. It is in the timber about 5.5 meters above the lake level and about 9 meters from the shore.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in ledge rock.

Rainy Lake 26. (See description of reference monument 278.)

Rainy Lake 27. (See description of reference monument 277.)

Rainy Lake 40 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a small island about three-fourths mile south of the extreme eastern tip of Sand Point Island, about 1 mile north of the steamboat channel and about 1<sup>3</sup>/<sub>4</sub> miles northeast of Powder Island. The island is the most southeastern of the islands in this vicinity and is about 50 meters wide and 180 meters long. The station is about 10 meters east of the highest point of the island, about 3 meters above the lake level, about 12 meters from the north shore, 45 meters from the east shore, and 30 meters from the south shore.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in ledge rock.

Rainy Lake 41. (See description of reference monument 279.)

Rainy Lake 42. (See description of reference monument 285.)

Rainy Lake 44. (See description of reference monument 281.)

Rainy Lake 43 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a bare, flat rock about 600 meters north of the western entrance to Brule Narrows and about 70 meters west of the island which is just west of Mackenzie Island. The rock is about 30 meters long and the station is on the eastern end, 0.5 meter above the normal lake level, 3 meters from the east end of the rock and 4.5 meters from the north and south sides.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in ledge rock.

Rainy Lake 45. (See description of reference monument 282.)

Rainy Lake 46 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a small, high, timbered island, one of the northern islands of the group northwest of the west entrance to Brule Narrows. It is about one-half mile southwest of Bald Island, a high barren island, and about 2¼ miles northwest of the west entrance to Brule Narrows. The station is on the southeastern part of the island, on the highest point, about 6 meters above the lake level, about 30 meters from the east shore and 15 meters from the south shore. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 47. (See description of reference monument 280.)

Rainy Lake 48. (See description of reference monument 284.)

Rainy Lake 49 (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on a rock about 3 meters in diameter just west of the group of islands which are northwest of the west entrance to Brule Narrows. It is about one-half mile due south of Bald Island a high, bold, barren island on which reference monument 283 is located. The station is about 0.7 meter above the normal lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 50. (See description of reference monument 286.)

Rainy Lake 51 (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on the mainland near the west entrance to Brule Narrows and about 1 mile southwest of Mackenzie Island. It is about 45 meters south of the shore line and about 4.5 meters above the lake level on a smooth rocky knoll surrounded by dead jack-pine timber.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 52 (Minnesota, St. Louis County; James H. Van Wagenen, 1913; 1925).—On Rainy Lake, on a point of the mainland near the west entrance to Brule Narrows, northwest of a fisherman's cabin and due south of the west side of the island just west of Mackenzie Island. It is about 1 meter above the lake level, about 6 meters from the north shore of the point, and 36 meters from the west shore.

Station mark: A 2-inch bronze disk marked "U.S. & C.B. Survey" set in ledge rock.

Rainy Lake 53 (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, in Brule Narrows, near the west entrance, on the north shore of the mainland, about one-half mile south of Mackenzie Island and about one-half mile northwest of the lone tree in the narrows. It is about 1 meter above the lake level, about 6 meters from the north shore of the point, and about 24 meters from the east shore. Station mark: A 2-inch bronze disk marked "U.S. & C. B. Survey" set in ledge rock.

Rainy Lake 54. (See description of reference monument 287.)

## APPENDIX V

Rainy Lake 55 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the north side and near the middle of Brule Narrows, on an island which is about one-fourth mile north of the lone tree used as a range by steamboat pilots. It is on the southwest side of the island, on its highest point, about 3.5 meters above the lake level, about 45 meters from the north shore, 60 meters from the west shore, and 15 meters from the south shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 56. (See description of reference monument 288.)

Rainy Lake 57 (Minnesota, St. Louis County; James H. Van Wagenen, 1913).—On Rainy Lake, on the east end of a long narrow island which is on the south side of Brule Narrows, about 600 meters south of the lone tree which is used as a range by steamboat pilots. It is on the highest part of the ridge, about 3 meters above the lake level and about 30 meters from the east end of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 58 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the west end of a small island on the north side of Brule Narrows and about one-fourth mile east of the lone tree used as a range mark by steamboat pilots. It is about 2 meters above the lake level, about 21 meters from the south shore of the island, 36 meters from the west shore, and 6 meters from the north shore. Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 59. (See description of reference monument 290.)

Rainy Lake 61. (See description of reference monument 289.)

Rainy Lake 62. (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the large island on the north side of the east entrance to Brule Narrows, at the end of a point projecting toward the west—the most southern point of the island. It is about three-fourth mile southeast of Lone Tree Island, about 1 meter above the lake level, and about 15 meters from the west end of the point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 60. (See description of reference monument 291.)

Rainy Lake 66. (See description of reference monument 292.)

Rainy Lake 63 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on the west point of a small, low, timbered island near the north shore of the lake, about 1½ miles east of the east entrance to Brule Narrows. It is about 0.4 meter above the lake level, northeast of two jack-pine stumps, and northwest of a single stump.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 64 (Ontario, Rainy River District; James H. Van Wagenen, 1913).—On Rainy Lake, on a small, low, bowlder-covered island, about 1 mile east of the east entrance to Brule Narrows and about 300 meters southeast of Pater Noster Island. The station is near the center of the island and about 0.3 meter above the lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 65. (See description of reference monument 293.)

Rainy Lake 67 (Minnesota, St. Louis County; James H. Van Wagenen, 1914; 1925).—On Rainy Lake, about 5 miles southeast of the east entrance to Brule Narrows, on the northeast end of Blueberry Island. It is about 3 meters above the lake level, about 30 meters from the northeast point of the island, and about 6 meters from the north shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 73 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 6 miles east of the eastern entrance to Brule Narrows, on a rocky island covered with loose bowlders, the south-west island of a group of three called Gull Rocks, which are near the middle of the lake. The station is about 1.5 meters above the lake level and is on the eastern end of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock and surrounded by loose bowlders.

Rainy Lake 69 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Rainy Lake, about 7 miles southeast of the east entrance to Brule Narrows, about 2 miles south of Gull Rocks, on a point of the mainland about 1 mile east of Browns Bay. The station is about 4 meters above the lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 72 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 8 miles southeast of the east entrance to Brule Narrows, on the south end of a small, lone island lying in the

open lake about due south of the west extremity of Deer Horn Point. The island is covered with small jack pines. The station is about 2 meters above the lake level, about 15 meters from the west shore, 15 meters from the south shore, and 23 meters from the east shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 77 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 9 miles east of the eastern entrance to Brule Narrows, about 5 miles northwest of Kettle Falls, and about 1,000 meters southwest of Blackpoint Island; on the most eastern of the small islands in this vicinity. The island is a white rock about 30 meters in diameter, bare for the greater part of its area and with one tall white pine and a few smaller trees on it. The station is on the highest point near the center of the island.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

**Vague** (Ontario, Rainy River District; Jesse Hill, 1914).—On Rainy Lake, on Vague Point, about 12 miles east of the eastern entrance to Brule Narrows, about 1¼ miles northwest of Breezy Island, and about 1¼ miles northeast of Sand Narrows. It is in burnt jack-pine timber, about 3 meters above the lake level, about 45 meters north of the south shore of the point, and about 340 meters east of the southwest extremity of the point.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is set in ledge rock 4.85 meters northwest of the station and a second bolt is set 5.60 meters southwest. Boundary reference monument 300 is set in the same ledge at a distance of 0.31 meter.

Stokes (Ontario, Rainy River District; Jesse Hill, 1914).—On Rainy Lake, about 3 miles northeast of Kettle Falls. on the second small bay south of the entrance to Stokes Bay and east of the northern end of the Canadian Channel and the northern end of Oak Point Island. It is on the top of a ridge, about 20 meters above the lake level, and about 100 meters southwest of the head of the long narrow bay. A native-timber tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in concrete. An iron reference bolt is set in ledge rock 5.28 meters north of the station, and a second bolt is set in ledge rock 6.52 meters east.

Oak (Ontario, Rainy River District; Jesse Hill,1914).—On Rainy Lake, about 1¼ miles northeast of Kettle Falls, on Oak Point Island. It is near the highest point on the island, about 40 meters above the lake level, about 360 meters west of the west shore of the Canadian Channel, and 600 meters north of the most northern islands in the channel. A native-timber tower was erected over the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock. An iron reference bolt is 2.39 meters south and a second bolt is 3.25 meters east of the station, both set in ledge rock.

Rainy Lake 82 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, about 2 miles north of American Kettle Falls, on the north shore of Oak Point Island, about midway between the Canadian and American channels, on the most prominent point along this side of the island. It is about 4 meters above the lake level, about 15 meters from the end of the point, 6 meters from the northeast shore, and 24 meters from the southwest shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 90 (Ontario, Rainy River District; James H. Van Wagenen, 1914; 1925).—On Kettle River, on the Oak Point Island shore, about 750 meters south of Surveyors Island and of the mouth of the river. It is on the hillside about 20 meters above the water surface of the river, about 100 meters from the shore, and nearly due east of the first narrow place in the river above its mouth.

Station mark: A 2-inch bronze disk set in ledge rock. Triangulation station "Dog," marked by a United States Coast Survey bronze triangulation disk, is 16.29 meters from the station in azimuth 324° 31′, and a bronze disk with an arrow pointing toward "Dog" is 10 meters from the station in azimuth 322° 44′, and 6.30 meters from "Dog" in azimuth 147° 21′.

**Rainy Lake 92** (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on Oak Point Island, about three-fourths mile northeast of American Kettle Falls and about one-half mile south of Surveyors Island and the mouth of the river. It is on a high bare rock on the point where the channel makes a big bend to the left coming up the river. It is about 215 meters from the end of the point, about 130 meters from the south shore, about the same distance from the northwest shore of the point, and about 22 meters above the water surface.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 94 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the mainland, about one-half mile south of Surveyors Island and the mouth of the river and about three-fourths mile north of American Kettle Falls. It is on the southeast end of a rocky ridge which runs parallel with the river and is about 90 meters from the shore. There is a deep canyon running along the west side of this ridge and another canyon cuts across the ridge just south of the station. The station is about 15 meters above the water surface.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 96 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the mainland, about three-fourths mile south of Surveyors Island and the mouth of the river and about one-half mile north of American Kettle Falls. It is northwest of two islands between which the boundary runs and also northwest of a sharp bend in the boundary channel. It is about 9 meters above the water surface.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 98 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, on the Oak Point Island shore, about three-fourths mile south of Surveyors Island and the mouth of Kettle River and about one-half mile northeast of American Kettle Falls, and about 120 meters north of the nearer of the two small islands between which the boundary passes. It is on the east side of a small point, on the highest part of the rock, about 3 meters above the water surface and about 3 meters from shore.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in the rock.

River (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, on the long high peninsula which extends northeast from the mainland, and about 560 meters northeast of Kettle Falls (American Falls). It is about 70 meters from the north shore of the point, about 100 meters from the south shore, about 250 meters from the end of the point, and about 14 meters above the lake level. It is on the highest ground in this vicinity with the exception of a ledge which runs northeast and southwest about 30 meters south of the station.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Knox (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Rainy Lake, on a high, rocky point about one-half mile east of the Canadian Kettle Falls, and about 500 meters northeast of Randolph's House. It is on the central one of the three most prominent ledges on the highest ground on the point, about 18 meters above the lake level.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 113 (Ontario, Rainy River District; James H. Van Wagenen, 1914).—On Kettle River, at the outlet of Namakan Lake, on the steep, timber-covered hillside and near the top of the slope. It is about 180 meters upstream from the south end of the dam in the boundary channel at Kettle Falls. It is about 15 meters from the shore and about 10 meters above the water surface in the river above the falls.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

Rainy Lake 114 (Minnesota, St. Louis County; James H. Van Wagenen, 1914).—On Kettle River, at the outlet of Namakan Lake, on the highest part of a high point of the mainland, about 190 meters upstream from the north end of the dam in the boundary channel at Kettle Falls. It is on a rock which slopes in all directions from the station. It is about 15 meters from the south shore of the point, about 40 meters from the west shore, and about 11 meters above the water surface above the dam.

Station mark: A 2-inch bronze disk marked "U. S. & C. B. Survey" set in ledge rock.

## CURTAIN FALLS TO PIGEON RIVER, MINOR SCHEMES

Johnny (Minnesota, St. Louis County; W. B. Fairfield, 1914).—On the west shore of Crooked Lake, about three-fourths mile southeast of Curtain Falls. The station is on the northeast point of the third headland above Curtain Falls. It is on top of the white granite cliff about 12 meters above the water.

Station mark: A bronze disk set in the rock.

Ipse (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the north shore of Crooked Lake, about 1% miles southeast of Curtain Falls. The station is on the western tip of the rocky point on the south side of the narrow entrance to a bay extending eastward from the lake for about three-fourths mile, with an extreme breadth of about three-eighths mile. It is on the smooth granite ledge, about 18 meters from the tip of the point, and about 6 meters west of the highest part.

Station mark: A drill hole within a triangle cut in the ledge.

Jingle (Minnesota, St. Louis County; W. B. Fairfield, 1914).—In Crooked Lake, about 1¾ miles southeast of Curtain Falls. The station is on the northern one of two small rocky islands lying in the entrance to the great southwest bay of the lake. There are some outlying rocks to the northwest of the station, about in line with the west end of the large island in the center of the large open body of water. The station is on the north end of the island, on top of the sloping granite ledge, about 9 meters from the water.

Station mark: A drill hole within a triangle cut in the ledge.

Knit (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the north shore of Crooked Lake, about 2¾ miles southeast of Curtain Falls. The station is on the extreme southwest point of the shore where the lake turns from a westerly course to a northwesterly course into the last open body of water before reaching Curtain Falls. It is on a large fixed rock on the sloping hillside, about 15 meters back from the water. There is a forest ranger's cabin on the slope just above the station.

Station mark: A bronze disk set in the rock. A drill hole within a triangle cut in the rock, marking triangulation station "Mutt," is about 100 meters northeast of the station. Jerry (Ontario, Rainy River District; W. B. Fairfield, 1914).—In Crooked Lake, about 3 miles southeast of Curtain Falls. The station is on the east end of an island, about 600 meters long, lying in the main channel of the lake going east. South of and parallel to this island is another much longer and larger island. The international boundary passes between the two islands. The station is on the top of the highest part of the ledge and at the edge of the young pine growth. The shore line extends farther out to the south and east, but is not so high as at the station.

Station mark: A bronze disk set in the rock.

India (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the north shore of Crooked Lake, about 3 miles southeast of Curtain Falls. The station is on the first point east of the point, around which the lake makes the last turn from west to north into the open water of the west end of the lake. It is on a little rock knob surrounded by muskeg, about 250 meters east of the most southwest point of the turn of the shore line.

Station mark: A drill hole within a triangle cut in the rock.

Luck (Minnesota, St. Louis County; W. B. Fairfield, 1914).—In Crooked Lake, about  $3\frac{1}{2}$  miles southeast of Curtain Falls. The station is on the most eastern point of the very large long island that lies in the main channel of the lake just east of the most southwestern great bay of the lake. It is on the granite ledge, about 6 meters from the water's edge and about 3 meters above the lake level.

Station mark: A bronze disk set in the rock.

Lofty (Minnesota, St. Louis County; W. B. Fairfield, 1914).—On the south side of Crooked Lake, about 4¼ miles southeast along the boundary channel from Curtain Falls. The station is on the high and steep pine-covered hill on the west end of the peninsula, which lies at the east side of the entrance to the second great southern bay of the lake as counted from Curtain Falls. The hill is not on the extreme end of the peninsula, but it is the highest one. The top of the hill is a bare ledge of considerable extent. The station is on this bare ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Yet (Minnesota, St. Louis County; W. B. Fairfield, 1915).—On the south side of Crooked Lake. The station is on the summit of the very high isolated hill that rises from the lake shore at the southeast side of the great southwestern bay of the lake. It is about 300 meters back from the lake shore and about 50 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Not (Minnesota, St. Louis County; W. B. Fairfield, 1915).—On the south side and about the middle of Crooked Lake. The station is on the summit of the high hill on the west side of the entrance to the third from the west (and largest) of the great southern bays of the lake. It is about 400 meters back from the shore and almost due west of the large island lying in the entrance to the bay.

Station mark: A drill hole within a triangle cut in the rock.

**Trouble** (Minnesota, St. Louis County; W. B. Fairfield, 1915).—On the south side and near the middle of Crooked Lake. The station is on the summit of a rocky-topped hill about three-fourths mile southwest of the head of the third from the west (and the largest) of the great southern bays of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Lady (Minnesota, St. Louis County; W. B. Fairfield, 1914).—In Crooked Lake, about 4¾ miles east along the boundary channel from Curtain Falls. The station is on a small double island, the east and west parts of which are connected by a low rock ridge that lies just north of a little bay near the middle of the east and west shore line of this part of the lake. It is on the highest point of the eastern part of the island, on the solid ledge, about 6 meters from the water and about 4 meters above the lake level.

Station mark: A bronze disk set in the ledge.

Lander (Minnesota, St. Louis County; W. B. Fairfield, 1914).—In Crooked Lake, about 4¾ miles east along the boundary channel from Curtain Falls. The station is on the north point of a small island lying close offshore to the west of the high northern headland of the south shore.

Station mark: A bronze disk set in the rock just above high-water mark.

Lash (Minnesota, St. Louis County; W. B. Fairfield, 1914; 1921).—In Crooked Lake, about 5 miles southeast along the main channel of the lake from Curtain Falls. The station is on a small island about 100 meters west across the boundary channel from the west end of a very large island, and about 50 meters north from a high headland of the south shore of the lake. It is on the southeast end of the island about 10 meters from the shore and about 3 meters above the water.

Station mark: A bronze disk set in the rock.

Large (Minnesota, St. Louis County; W. B. Fairfield, 1914).—On the south shore of Crooked Lake, about 5 miles southeast along the boundary channel from Curtain Falls. The station is on a projection point of the

shore between two small bays directly opposite reference monument 676, which is on the southwest point of the largest island in this part of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Love (Minnesota, St. Louis County; W. B. Fairfield, 1914).—Near the middle of Crooked Lake and about 3 miles west of the east entrance to the main body of the lake. The station is on the highest point of a small rocky islet about 200 meters off the United States shore at the west side of the entrance to the second great southern bay of the lake, counting from the east.

Station mark: A bronze disk set in the rock.

Knoll (Ontario, Rainy River District; W. B. Fairfield, 1914).—On Crooked Lake, about 6 miles southeast along the main channel of the lake from Curtain Falls. The station is on a small island that lies about 100 meters southeast of a very large island just east of the entrance to the most western east and west channel of the lake. There is a very large bay to the south of the large island and another to the north of it. The station is on the bare rock on the southern end of the island, about 4 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

Lame (Minnesota, St. Louis County; W. B. Fairfield, 1914).—On the south shore of Crooked Lake, near the middle of the lake, and about 3 miles west of the east entrance to the main body of the lake. The station is at the foot of the bluff on the bold shore line at the west side of the entrance to the second great southern bay of the lake, counting from the east. It is about 300 meters west of the large island lying in the entrance to the bay, on top of a rock about 1 meter across, and 2 meters above the water level.

Station mark: A drill hole within a triangle cut in the rock.

Left (Minnesota, Lake County; W. B. Fairfield, 1914).—On Crooked Lake, about 2 miles west of the east entrance to the large irregular main body of the lake. The station is on the small round island that lies south of and between two large islands in the main east-and-west channel of the lake. It is on the highest point of the island, about 4.5 meters above the water. The second great southern bay, as approached from the east, begins just west of the island.

Station mark: A drill hole within a triangle cut in the rock.

Lamb (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south shore of Crooked Lake, about 15% miles west-southwest of the east entrance to the main body of the lake, and near the north shore of the great headland that separates the two most eastern of the great southern bays of the main body of the lake. The station is on the timbered sidehill just up from the head of a little marshy cove. It is about 18 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Lax (Minnesota, Lake County; W. B. Fairfield, 1914).—On an island in the eastern part of the main body of Crooked Lake, about 1¾ miles west of the east entrance thereto. The station is on the summit of the hill on the south toe of the large L-shaped island that lies in the main east-and-west channel of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Laddy (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south shore of Crooked Lake, about 1½ miles west-southwest of the east entrance to the main body of the lake and on the north shore of the great headland that separates the two most eastern of the great southern bays of the main body of the lake. The station is on a rock cliff about midway of the headland and just east of a small marshy cove. It is about 12 meters above the water. There is a large island in the channel north of the station.

Station mark: A drill hole within a triangle cut in the rock.

Lagoon (Minnesota, Lake County; W. B. Fairfield, 1914).—On an island in the eastern part of the large and irregular main body of Crooked Lake, about 1½ miles west of the east entrance thereto. The station is on a small rock islet that lies south of and just within the angle of the large L-shaped island in the main east-and-west channel of the lake. It is on the highest part of the islet, less than a meter above the water.

Station mark: A drill hole within a triangle cut in the rock.

Law (Minnesota, Lake County; W. B. Fairfield, 1914).—On an island in the eastern part of the large irregular main body of Crooked Lake, about 1% miles west of the east entrance into this part of the lake. The station is on the southeast point of the large L-shaped island lying in the main channel. It is about 200 meters southwest of station "Jehu," which is on the most eastern point of the island.

Station mark: A drill hole within a triangle cut in the rock.

Jump (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south shore near the east end of the main irregular part of Crooked Lake, about 1¼ miles west of the east entrance. Leaving the east entrance, the main channel of the lake passes west around the north end of a very long narrow peninsula. Just west of this is a shorter and smaller peninsula. The station is on the most western prominent point of this second peninsula,

on a large fixed rock on the bluff, about 6 meters above the water. The east end of a large island bears north  $20^{\circ}$  west, about 250 meters distant from the station.

Station mark: A drill hole within a triangle cut in the rock.

Lass (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south shore of Crooked Lake, about 1¼ miles west of the east entrance to the large irregular main body of the lake. The station is on the most northwestern point of a high and rugged peninsula that projects into the main channel as one goes west through the lake. The channel divides at the east end of a large L-shaped island about 200 meters northwest of the station. The station is on the extreme point, on a large fixed rock, about 4.5 meters back from the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

Jehu (Minnesota, Lake County; W. B. Fairfield, 1914).—On an island in the eastern part of the main body of Crooked Lake, known as the lower lake, about 1¼ miles west of the east entrance to the main body of the lake. The station is on the east end of a large L-shaped island, the top of the L being to the east, having narrow passages around it both to the north and to the south. The international boundary line runs through the passage to the north and then passes around the west end of the island, between it and another large island. The station is on the highest point of the granite ledge that makes up from the water to a height of about 4.5 meters.

Station mark: A drill hole within a triangle cut in the ledge.

Jasper (Minnesota, Lake County; W. B. Fairfield, 1914).—On Crooked Lake, near the east side. The station is on the double point of the long fingerlike peninsula, that makes up from the south shore, about three-fourths mile west of the east entrance to the main body of the lake. It is on a large fixed rock on the highest part of the north end of the eastern of the two points.

Station mark: A drill hole within a triangle cut in the rock.

Kid (Ontario, Rainy River District; W. B. Fairfield, 1914).—About three-fourths mile northwest of the east entrance to the large irregular main body of Crooked Lake. The station is on the north shore of a little bay on the east side of the entrance to the great northern bay that leads up to the part of the lake known as Gardner Bay. It is beside a large round bowlder on top of the conspicuous white bluff of the north shore of the bay, about 12 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

Ken (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the east shore of the large irregular main body of Crooked Lake and about one-half mile northwest of its east entrance. The station is on the headland that lies east and opposite, about 300 meters distant across the channel, from the high double point of the long peninsula which forms the west side of the most eastern of the great southern bays of the main body of the lake. There is a small bay to the northeast of the point and a small island lies in the entrance to the bay. The station is on the extreme northwest point of the headland on a fixed rock about 5 meters back from the edge of the water. Station mark: A bronze disk set in the rock.

Lag (Minnesota, Lake County; W. B. Fairfield, 1914).—About three-fourths mile west of the east entrance to the large irregular main body of Crooked Lake. The station is on the east side of the north end of the long narrow peninsula that reaches up from the south. It is on the granite ledge on top of the rock bluff, about 15

narrow peninsula that reaches up from the south. It is on the granite ledge on top of the rock bluff, about 15 meters above the lake level. Station mark: A drill hole within a triangle cut in the rock. Reference monument 691, an 8-inch manga-

Station mark: A drill hole within a triangle cut in the rock. Reference monument 691, an 8-inch manganese-bronze post, is on top of the hill, about 50 meters west of the station.

King (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the east shore of the large irregular main body of Crooked Lake and about one-half mile northwest of its east entrance. The station is on the headland that lies east and opposite, about 300 meters distant across the channel, from the high double point of the long peninsula which forms the west side of the most eastern of the great southern bays of the main body of the lake. There is a small bay to the northeast of the point and a small island lies in the entrance to the bay. The station is on the most western part of the headland about midway of the length of the channel in front of it. It is on a fixed rock about 1 meter from the shore line.

Station mark: A drill hole within a triangle cut in the rock.

Jar (Minnesota, Lake County; W. B. Fairfield, 1914).—On the east shore of the main body of Crooked Lake, near the east entrance. The station is on the point of the mainland about 350 meters south of the mouth of the channel passing around the north and west sides of the large island lying in the entrance to the lake, and about 200 meters west of the narrow passage at the south end of the same island. There is a small hill on the point. The station is on the highest point of the ledge on the summit of the hill.

Station mark: A drill hole within a triangle cut in the ledge.

Lad (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south side of Crooked Lake. The station is on the bold rocky point about seven-eighths mile southwest across the bay from the east entrance to the large irregular main body of the lake. A rocky wooded island lies about 150 meters off the point to the southeast. The station is on top of the rock point, about 7 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

Jaxe (Minnesota, Lake County; W. B. Fairfield, 1914) .- On the east shore of the eastern south arm of the main body of Crooked Lake. This is about 1½ miles west of the long narrow north and south reaches of the lake which connect it with Basswood River. The station is on a point of the shore about one-half mile south of the south end of the narrow passage with rapids in it that extend around the north and west sides of a large island and through which the international boundary passes.

Station mark: A drill hole within a triangle cut in the rock near the shore line.

Last (Minnesota, Lake County; W. B. Fairfield, 1914) .- On Crooked Lake, on the west shore of the large island lying in the east entrance to the large irregular main body of the lake. It is about midway between the ends of the narrow north-and-south part of the boundary channel around the north and west sides of the island. It is on a low point just above high water.

Station mark: A drill hole within a triangle cut in the rock.

Kitty (Ontario, Rainy River District; W. B. Fairfield, 1914) .- On the north shore of Crooked Lake, near the east end. The station is on the west side of the narrow boundary channel around the north and west sides of the large island that lies in the east entrance to the large irregular main part of the lake. It is about one-fourth mile below the rapids in the channel and about midway between the ends of the north-and-south section of the channel. It is about 5 meters above the water, on a rock in front of a larger rock.

Station mark: A drill hole within a triangle cut in the rock.

Lamp (Minnesota, Lake County; W. B. Fairfield, 1914; 1921) .- On the eastern part of Crooked Lake, on the northwest point of the large island lying in the east entrance to the large irregular main body of the lake. It is on that part of the narrow boundary channel known as the boundary rapids. It is on a bare rock just about the high-water mark, about 50 meters east of the extreme northwest point of the island.

Station mark: A bronze disk set in the rock.

Koble (Ontario, Rainy River District; W. B. Fairfield, 1914) .- On the north shore of Crooked Lake. The station is on the north shore of the narrow channel of swift water that passes around the large island lying in the east entrance to the main or lower body of the lake. It is upstream from swift water and about 30 meters upstream from a rock awash at high water. It is on an igneous rock, a little above high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

Jock (Minnesota, Lake County; W. B. Fairfield, 1914) .- On the south end of the large island that lies at the east entrance to the main body of Crooked Lake. A narrow channel, through which the boundary line runs, passes around the north and west sides of the island, and there is a very narrow passage, not more than 2 meters wide and 15 meters long, around the south end of the island. There are small rapids in both channels and the part of the lake to the west is often called the lower lake, and the part to the east the upper lake. The station is on the summit of the hill on the south end of the island.

Station mark: A drill hole within a triangle cut in the large granite ledge of the summit.

Jaw (Minnesota, Lake County; W. B. Fairfield, 1914) .- On the south shore of the eastern part of Crooked Lake. The station is on the high steep wooded hill that rises on the point just south from the most southern point of the large island lying in the east entrance to the large irregular main body of the lower lake. It is on a bare rock shoulder, on the northwest slope of the hill, some distance below the summit.

Station mark: A drill hole within a triangle cut in the ledge at its highest point.

Jig (Minnesota, Lake County; W. B. Fairfield, 1914) .- On the eastern part of Crooked Lake, on the southeast point of the large round island around the north side of which, and the north and west side of the larger island just west, are the narrows leading into the large and lower part of the lake. The station is on the highest part of the point on the granite top.

Station mark: A bronze disk set in the rock.

Jane (Minnesota, Lake County; W. B. Fairfield, 1914) .-- On the eastern part of Crooked Lake, about 51/2 miles north of Lower Basswood Falls. The station is on the summit of the highest point near the center of the largest island in the north end of the long narrow north-and-south part of the lake.

Station mark: A drill hole within a triangle cut in the ledge.

In (Ontario, Rainy River District; W. B. Fairfield, 1914) .- On the east shore of Crooked Lake, about 5 miles north of Lower Basswood Falls. The station is on a rocky and wooded bluff, about 350 meters south of the south end of the largest island in the north end of the long narrow north-and-south reach of the eastern part of the lake. It is on a granite point among the pines, about 15 meters above the lake level and directly overlooking the lake.

Station mark: A drill hole within a triangle cut in the rock.

Gum (Ontario, Rainy River District; W. B. Fairfield, 1914) .- On the east shore of Crooked Lake, about 4% miles north of Lower Basswood Falls. The station is on the north end of the cliff on the prominent point about one-half mile south of the largest island in the north end of the long narrow north-and-south reach of the eastern part of the lake. It is on the solid granite top of the highest point on the cliff.

Station mark: A bronze disk set in the rock. A drill hole within a triangle cut in the rock, marking triangulation station "Ice," is about 50 meters south of the station.

Ibex (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the east shore of Crooked Lake, about 4¾ miles north of Lower Basswood Falls. The station is on the high cliff about 300 meters north of the narrows that are just north of where the lake runs west for about 1 mile and then again turns to the north. It is on the north end of the cliff on the lower rock bluff that rises shere from the water.

Station mark: A drill hole within a triangle cut in the rock.

Ice (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the east shore of Crooked Lake, about 47% miles north of Lower Basswood Falls. The station is on the south end of the cliff on the prominent point about one-half mile south of the largest island in the north end of the long narrow north-and-south reach of the eastern part of the lake. It is on the bare ledge on the summit of the cliff.

Station mark: A drill hole within a triangle cut in the rock. A bronze disk set in the rock, marking triangulation station "Gum," is about 50 meters north of the station.

**Genus** (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the east shore of Crooked Lake, about 4½ miles north of Lower Basswood Falls. The station is on the north end of the cliffs at the narrows, which are just north of where the lake has made a jog of about a mile to the west and then turned north again. It is on the smooth rock summit of the cliffs.

Station mark: A drill hole within a triangle cut in the rock.

George (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the north shore of Crooked Lake, about 4¼ miles north of Lower Basswood Falls. The station is on the narrow peninsulalike point around which the lake turns into the second and last narrow north reach. It is on the highest part of the bluff, about 100 meters north of the extreme tip of the point.

Station mark: A drill hole within a triangle cut in the rock.

Honk (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south shore of Crooked Lake, about 4 miles north of Lower Basswood Falls. The station is on a prominent point on the west shore of the large bay from which the lake turns into the second and last narrow north reach. About 100 meters northwest of the station, across a small cove, there is another rocky point on which is a large round boulder about 3 meters in diameter. The station is on top of the granite ledge, about 4.5 meters from the water's edge and about 1.5 meters above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

**Hire** (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south side of Crooked Lake, about 4 miles north of Lower Basswood Falls. The station is on the summit of the hill on the point around which the lake makes a big bend from the north toward the west. It is about 300 meters back from the rounded shore line of the point.

Station mark: A drill hole within a triangle cut in the rock.

Herd (Minnesota, Lake County; W. B. Fairfield, 1914).—On the south end of a small rocky island, in Crooked Lake, about 4 miles north of Lower Basswood Falls. The island is near the west shore of the wide expanse of the lake just before it turns to the west.

Station mark: A drill hole within a triangle cut in the smooth granite ledge.

**Hide** (Minnesota, Lake County; W. B. Fairfield, 1914).—On the west shore of Crooked Lake, about 3<sup>3</sup>/<sub>4</sub> miles north of Lower Basswood Falls. The station is on a granite point about 300 meters north of the narrows, north of which the lake widens out into an open expanse about 1 mile long and one-half mile wide. It is on the north end of the granite ledge forming the point, and is about 1.5 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Grog** (Ontario, Rainy River District; W. B. Fairfield, 1914).—On the east shore of Crooked Lake, about  $3\frac{1}{2}$  miles north of Lower Basswood Falls. The station is on the cliff near the north end of the narrows, north of which the lake widens into an open expanse about 1 mile long and one-half mile wide. It is about 130 meters north of reference monument 728 and on a continuation of the same cliff.

Station mark: A bronze disk set in the rock on the highest part of the cliff.

**Hint** (Minnesota, Lake County; W. B. Fairfield, 1914; 1915).—On the west side of Crooked Lake, about  $3\frac{1}{2}$  miles north of Lower Basswood Falls. The station is on the ridge that extends west from the narrows, north of which the lake widens into an open expanse about 1 mile long and one-half mile wide. It is about 300 meters west of the narrows. Two bays, one to the north and one to the south, extend inland, each to within 200 meters of the station. The station is on the first high rock ledge west from the bluff at the narrows. It is surrounded by timber.

Station mark: A drill hole within a triangle cut in the rock.

96030-31-36

. Goal (Ontario, Rainy River District; W. B. Fairfield, 1914; 1921).—On the north shore of Crooked Lake, about 2¼ miles north of Lower Basswood Falls. The station is on the point that lies about 70 meters northwest of the western island off the mouth of Moose Bay. It is on a large flat place on top of the high rock on the point.

Station mark: A drill hole within a triangle cut in the rock.

Hall (Minnesota, Lake County; W. B. Fairfield, 1914).—On the west shore of Crooked Lake, about 2 miles north of Lower Basswood Falls. The station is on the point around which the lake turns toward the west. It is about 50 meters southwest of the rocky southern point of an island, on a granite ledge about 1.5 meters from the water's edge, and 1.5 meters above the lake level.

Station mark: A bronze disk set in the ledge.

Hen (Minnesota, Lake County; W. B. Fairfield, 1914).—On the west shore of Crooked Lake, about 1¾ miles north of Lower Basswood Falls. The station is on a low granite point at the foot of the steep rocky bluff, 110 meters north of reference monument 745 on the bluff on the opposite shore of the lake. It is about 3 meters back from the water's edge.

Station mark: A drill hole within a triangle cut in the rock ledge.

Hilt (Minnesota, Lake County; W. B. Fairfield, 1914).—On the west shore of Crooked Lake, about 1½ miles north of Lower Basswood Falls. The station is on the first rocky point north of the rock cliff with drawings on it, known as Indian Rock. It is on the shelflike granite ledge, about 2 meters back from the water's edge and 0.7 meter above the lake level. The bank rises steeply back of the station.

Station mark: A bronze disk set in the ledge.

Hades (Minnesota, Lake County; W. B. Fairfield, 1913; 1915).—At the head of Crooked Lake, about 450 meters west of Lower Basswood Falls. The station is on top of the ridge, about 150 meters west of the lake shore, on the highest point of a large ledge that is partly open towards the east, but heavily timbered in other directions. Station mark: A bronze disk set in the ledge.

**Grab** (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the north side of Basswood River, about three-fourths mile northeast of Lower Basswood Falls. The station is on the timbered and rocky ridge that rises from the river, about 300 meters northwest across the little bay from Wheelbarrow Portage. It is on the solid granite ledge on the highest part of the ridge overlooking the river.

Station mark: A drill hole within a triangle cut in the ledge.

Harem (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south side of Basswood River, just south of the first large island above Crooked Lake. The station is about 200 meters south of the river, on a large fixed rock, on the summit of the west end of the ridge.

Station mark: A bronze disk set in the rock.

Halter (Minnesota, Lake County; W. B. Fairfield, 1913).—On the last large island in Basswood River, above Lower Basswood Falls and Crooked Lake. The station is near the center, and on the highest point of the island.

Station mark: A bronze disk set in a large fixed rock.

Girl (Ontario, Rainy River District; W. B. Fairfield, 1913; 1915).—On the north side of Basswood River. The station is on the high hill that lies in the bend of the river between the two wide expansions in the last and lower north-and-south reach. It is across the river and one-half mile north of the lower end of the long portage trail. It is on the highest point of the ledge on the summit of the hill.

Station mark: A bronze disk set in the ledge.

Gout (Ontario, Rainy River District; W. B. Fairfield, 1913; 1915).—On the north side of Basswood River, on the north side of the large bay or wide expanse of the river that is at the north end of the last north reach of the river above Lower Basswood Falls. The station is about 1¼ miles east by north of Lower Basswood Falls, on the summit of the high granite ledge, about 300 meters north from the shore of the river.

Station mark: A drill hole within a triangle cut in the ledge.

Gong (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the north side of Basswood River, about 1 mile below Basswood Lake. The station is on the summit of the high ridge that rises from the north shore of the river along the north side of the first big loop in the river below the lake. It is on the bare granite top on the west end of the ridge.

Station mark: A drill hole within a triangle cut in the rock.

Gift (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the north side of Basswood River, about 1 mile northwest of Basswood Lake. The station is on the high bare granite ridge that rises from the north bank of the river on the north side of the first big loop in the river below Basswood Lake. It is on the highest and second bare point east of the west end of the ridge.

Station mark: A drill hole within a triangle cut in the ledge.

Havoc (Minnesota, Lake County; W. B. Fairfield, 1913).-On the west side of Basswood Lake, southwest of Basswood Falls, and west of the mouth of the bay from which Basswood River flows. The terrain rises from the bay in a succession of granite ridges. The station is on one of the highest of these ridges, on a smooth granite ledge clear of timber, although there is timber on all sides. It is about 600 meters back from the west shore of the bay.

Station mark: A drill hole within a triangle cut in the highest part of the ledge.

Good (Ontario, Rainy River District; W. B. Fairfield, 1913) .- On the north side of Basswood River, about 1,400 meters north of Basswood Falls. The station is on the ridge that rises from the north shore of the small bay that lies to the east of the north end of the first north stretch of the river after leaving Basswood Lake. It is on the east end of the ridge, on a granite knoll, about 35 meters above the lake, and about 300 meters back from the edge of the lake.

Station mark: A bronze disk set in the rock.

This (Ontario, Rainv River District; W. B. Fairfield, 1915; 1921).-On the north bank of Basswood River, about 50 meters below the middle of Wheelbarrow Falls. The station is on a large rock about 2.4 meters above the ground, about 22 meters back from the river's edge, and about 6 meters above the water.

Station mark: A bronze disk set in the rock.

Isle (Minnesota, Lake County; W. B. Fairfield, 1915).-On Basswood River. The station is on the highest point of a small island that lies on the west side of the large island just above Wheelbarrow Falls. Station mark: A drill hole within a triangle cut in a rock.

Little (Minnesota, Lake County, W. B. Fairfield, 1915) .- On Basswood River. The station is on a roundtopped rock on the west shore of the large island that lies just above Wheelbarrow Falls. There is a small island about 50 meters offshore, just opposite the station.

Station mark: A drill hole within a triangle cut in the rock.

Point (Ontario, Rainy River District; W. B. Fairfield; 1915).-On the north bank of Basswood River, about 220 meters north of Wheelbarrow Falls. The station is on a ledge of rock about 6 meters back from and about 6 meters above the shore line.

Station mark: A bronze disk set in the ledge.

Lefty (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On the north bank of Basswood River, about 500 meters upstream from Wheelbarrow Falls. The station is on a sloping ledge about 12 meters back from the shore line and about 7 meters above the water level.

Station mark: A drill hole within a triangle cut in the ledge.

Round (Minnesota, Lake County; W. B. Fairfield, 1915).-On Basswood River, on the north side of the large island that lies just above Wheelbarrow Falls. The station is near the top of the north slope of the hillside, about 50 meters from the shore and about 27 meters above the water level.

Station mark: A drill hole within a triangle cut in the rock.

Up (Minnesota, Lake County; W. B. Fairfield, 1915).-On Basswood River, on the north side of the large island that lies just above Wheelbarrow Falls. The station is on a round-topped rock about 30 meters back from the shore and about 15 meters above the river.

Station mark: A drill hole within a triangle cut in the rock.

Cut (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On the north bank of Basswood River opposite the upper end of the large island that lies just above Wheelbarrow Falls. The station is on a ledge about 30 meters back from the shore line.

Station mark: A drill hole within a triangle cut in the ledge.

Log (Ontario, Rainy River District; W. B. Fairfield, 1915) .-- On the north bank of Basswood River. The station is on the point about 150 meters northeast of the northeast point of the large island that lies immediately above Wheelbarrow Falls. It is on a ledge 3.6 meters back from the shore line and 1 meter above the water.

Station mark: A drill hole within a triangle cut in the ledge.

Black (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On the north bank of Basswood River. The station is on the northeast side of the bay or pond that lies above Wheelbarrow Falls. It is on a black, flat, rock point, near the shore line and about 2.4 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

Fine (Ontario, Rainy River District; W. B. Fairfield, 1915).-On the east bank of Basswood River, about 1 mile upstream from Wheelbarrow Falls. The station is on a rock bluff about 6 meters above the water, about 250 meters north of a sharp turn in the river.

Station mark: A drill hole within a triangle cut in the rock.

Wood (Minnesota, Lake County; W. B. Fairfield, 1915).—On the west bank of Basswood River, about 1 mile upstream from Wheelbarrow Falls. The station is on a rock bluff about 6 meters above the river and about 200 meters north of a sharp bend of the river.

Station mark: A drill hole within a triangle cut in rock.

Jumpy (Ontario, Rainy River District; W. B. Fairfield, 1915).—On the north bank of Basswood River, about 1 mile above Wheelbarrow Falls. The station is on the rock point at the turn of the river from the west to the north. It is about 22 meters back from the river and about 6 meters above the water level.

Station mark: A bronze disk set in the rock.

**Hump** (Ontario, Rainy River District; W. B. Fairfield, 1915).—On the north bank of Basswood River about 1¼ miles upstream from Wheelbarrow Falls. The station is about 150 meters upstream from a sharp turn of the river from west to north. It is on a large flat rock about 30 meters from the river and about 15 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

Saw (Minnesota, Lake County; W. B. Fairfield, 1915).—On the south side of Basswood River, on the summit of a knoll between the river and the wagon road known as Horse Portage. It is just below the rapids at the turn of the river, about 80 meters from the river, about 30 meters from the wagon road, and about 12 meters above the water in the river.

Station mark: A drill hole within a triangle cut in the rock.

Near (Minnesota, Lake County; W. B. Fairfield, 1915).—On the south side of Basswood River, about 1 mile downstream from Basswood Falls. The station is on the sloping rock ledge near the top of the ridge, about 80 meters from the river and about 30 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

Fly (See description of Reference Monument 790).

Bean (Ontario, Rainy River District; W. B. Fairfield, 1915).—On the east bank of Basswood River, about one-half mile north of Basswood Falls. The station is on a point jutting out to the south of a small bay. It is about 9 meters from high-water mark and about 6 meters above it.

Station mark: A bronze disk set in rock.

Birch (Minnesota, Lake County; W. B. Fairfield, 1915).—On the west bank of Basswood River, about 800 meters north of Basswood Falls. The station is about 150 meters west of the rapids in the narrows at the turn of the river. It is on a flat-topped bowlder.

Station mark: A drill hole within a triangle cut in the bowlder.

Big (Minnesota, Lake County; W. B. Fairfield, 1915).—On the west side of Basswood River about 700 meters north of Basswood Falls. The station is on a large bowlder about 4 meters square and 3 meters high, about 36 meters from the water above the rapids in the narrows.

Station mark: A drill hole within a triangle cut in the bowlder.

Burn (Ontario, Rainy River District; W. B. Fairfield, 1915; 1921).—On the east side of Basswood River on the summit of a rock knoll nearly opposite the second rapids north of Basswood Falls. The station is about 25 meters from the river and about 25 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

**Blow** (Ontario, Rainy River District; W. B. Fairfield, 1915).—On the east side of Basswood River, on the rocky knoll north across the rapids from the north end of the large island that lies just north of Basswood Falls. The station is about 50 meters from the water.

Station mark: A bronze disk set in rock.

**Harpy** (Minnesota, Lake County; W. B. Fairfield, 1913).—On the small rocky island in the western part of Basswood Lake, three-fourths mile south of Basswood Falls and just outside the narrow entrance to the bay from which the falls and Basswood River leave the lake. The station is on the solid ledge on the highest part of the island.

Station mark: A drill hole within a triangle cut in the ledge.

**Glue** (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the north side of Basswood Lake, on the point at the west end and on the north side of the narrow passage that lies along the north side of United States Point. The station is on the summit of the granite knoll about 100 meters back from the lake shore and about 30 meters above the lake level. There is a higher knoll about 150 meters to the north.

Station mark: A drill hole within a triangle cut in the rock.

Gin (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the south end of a high, rocky, timbered island in the northern part of Basswood Lake. The island lies in the west end of the narrow passage around and

north of United States Point, connecting the eastern and western parts of the lake. The island is the most eastern one of the group of islands at the west end of the passage. The station is on the solid-rock point of the south end of the island, about 2.5 meters back from the shore line and about 2.5 meters above the water level. Station mark: A bronze disk set in the rock.

**High** (Minnesota, Lake County; W. B. Fairfield, 1913).—On Basswood Lake, on United States Point. The station is about 1 mile distant from and on the second high hill west of the east tip of the point. It is on a bare white rock knoll on the southern brow of the hill.

Station mark: A drill hole within a triangle cut in the rock.

Gown (Minnesota, Lake County; W. B. Fairfield, 1913).—Near the middle of the north stretch of Basswood Lake. The station is on a small rocky islet that has a large, lone Norway pine tree on it. Southeast of this island, about 150 meters distant, is another and larger island. Just north of these islands the lake bends to the northeast toward North Bay. The station is on the east end of the islet, on a large fixed rock southeast of the lone pine tree.

Station mark: A bronze disk set in the rock.

**Hold** (Minnesota, Lake County; W. B. Fairfield, 1913).—On the west shore of the north reach of Basswood Lake. The station is on a sharp rocky point of the shore line between two small bays just in the angle where the north stretch of the lake turns northeast toward North Bay. The station is on a large, irregularly shaped rock, about 3 meters from the water's edge and 3 meters above the lake level.

Station mark: A bronze disk set in the rock.

Hasp (Minnesota, Lake County; W. B. Fairfield, 1913).—In the north stretch of Basswood Lake. On a small rock islet that is the largest one of a group of rocks and islets in the north stretch of Basswood Lake, lying 250 meters off the big point of the shore seven-eighths mile southwest of the extreme end of United States Point. The station is on the highest point of the smooth rock, about 3 meters above the lake level.

Station mark: A bronze disk set in the rock.

Gore (Ontario, Rainy River District; W. B. Fairfield, 1913; 1921).—On a small island in the southern part of the north stretch of Basswood Lake, about 300 meters southwest of the most southwestern point of Canadian Point. The station is on a large fixed rock near the west end of the island, about 3.5 meters above the lake level. Station mark: A bronze disk set in the rock.

Halo (Minnesota, Lake County; W. B. Fairfield, 1913).—On the very large island in Basswood Lake lying on the west side of the channel just north of the great bend of the lake from the west to the north. The station is on the most eastern point of the island. This point is a bluff of granite about 15 meters high capped by a solid granite ledge. The station is on the highest point of the ledge. There is an Indian cemetery on the point, about 150 meters west of the station.

Station mark: A bronze disk set in the ledge.

Goat. (See description of reference monument 817.)

Hawk (Minnesota, Lake County; W. B. Fairfield, 1913).—On the shore of Basswood Lake, about 1½ miles south of Basswood Falls. The station is on the point on the south side and at the east end of the narrows leading from the main body of the lake to the large southwest forks of the lake. This point is the north point of a peninsula of considerable size that is connected with the mainland on the south by a long, rocky isthmus about 2 or 3 meters in width. The station is on the top of the high rock point, on a smooth granite ledge.

Station mark: A drill bole within a triangle cut in the ledge.

Haw (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south side of Basswood Lake, about 2 miles south by east and across the lake from Basswood Falls, on the high, bare, rocky hill just east of the first large, timbered island south of the point where the lake turns to the southwest toward Jackfish Bay. The station is on the summit of the hill which rises very steep from the water's edge with a face of almost solid rock. It is about 50 meters back from the water's edge and about 30 meters above the lake level.

Station mark: A drill hole within a triangle cut in the solid ledge.

Haze (Minnesota, Lake County; W. B. Fairfield, 1913).—South of Basswood Lake, about 3 miles south and across the lake from Basswood Falls. The station is on top of the bluff about 300 meters south of the head of the bay that deeply indents this part of the shore. A low swampy pass extends from the head of the bay, between the hills and in front of the station, to the Pipestone Falls branch of the lake. The station is on a bare granite ledge commanding a view from the south around through the west to the north. The hill continues to rise back of the station.

Station mark: A drill hole within a triangle cut in the ledge.

Hunch (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south side of Basswood Lake, on the point on the south side and at the west end of the narrows leading to the two large southwestern arms of the lake.

The eastern of the two arms turns around this point and extends up to Pipestone Falls. The station is on the summit of the high, bare, granite hill on the point, about 4 meters southeast of the highest place. Station mark: A drill hole within a triangle cut in the smooth ledge.

Hate (Minnesota, Lake County; W. B. Fairfield, 1913; 1914).-On the south side of Basswood Lake. After passing through the narrows from the main body of the lake into the southwest part of the lake, the lake divides into a right and a left arm. The left arm first runs southeast for about 1 mile, then turns to the southwest and extends about 5 miles to Pipestone Falls. The station is on the summit of the hill on the point around which this left arm turns from the southeast to the southwest. It is on the bare ledge on the highest part of the summit.

Station mark: A drill hole within a triangle cut in the ledge.

Hockey (Minnesota, Lake County; W. B. Fairfield, 1913; 1914) .- On the south end of Basswood Lake, on the rocky point of the shore 700 meters north across the bay from Hoist Camp and Hoist Portage. This point is on the west side of the bay and is an Indian camp ground. The station is on the highest part of the ledge forming the point and is about 12 meters from the water.

Station mark: A drill hole within a triangle cut in the rock.

Hoist (south base and azimuth station) (Minnesota, Lake County; W. B. Fairfield, 1913) .- On the south shore of the long southern arm of Basswood Lake that terminates at Hoist Portage. The station is on the west side of the mouth of the stream flowing from Fall Lake. The portage along this stream is the one known as Hoist Portage. The station is on the smooth granite ledge 15 meters back from the shore, 12 meters west of the north end of the St. Croix Lumber Co.'s cook and bunk house, and about 1.5 meters above the lake level. Station mark: A bronze disk set in the ledge.

Hoist North Base (Minnesota, Lake County; W. B. Fairfield, 1913).-On the south end of Basswood Lake, on the point on the north shore of the bay 1,100 meters northeast across the bay from Hoist Portage and Hoist Camp. The point is at the west end of the narrow passage going east toward the main body of the lake. The station is on a large fixed rock, about 5 meters back from the shore line and about 1 meter above the lake level. It is about 150 meters east of an old cabin on the shore.

Station mark: A bronze disk set in the rock.

Hale (Minnesota, Lake County; W. B. Fairfield, 1913).-On the southern arm of Basswood Lake leading to Hoist Portage. The station is on the high, rocky bluff point on the south side and at the west end of the narrow east-and-west passage of the arm, and is just south of the large island lying in the passage. It is on the highest part of the granite ledge forming the top of the bluff.

Station mark: A drill hole within a triangle cut in the ledge.

Half (Minnesota, Lake County: W. B. Fairfield, 1913).-On the west side of the southern arm of Basswood Lake leading to Hoist Portage. The station is on the partly bare ridge north of the narrow east-and-west part of the arm and just west and back of the peninsula lying on the north side of the entrance to the narrow part of the arm. It is about 250 meters east of the little bay on the north side of the peninsula and about 250 meters north from the shore of the narrow part of the arm. It is on a large fixed rock about 20 meters south of the highest part of the ridge.

Station mark: A drill hole within a triangle cut in the rock.

Hard (Minnesota, Lake County; W. B. Fairfield, 1913).-On the south shore of the south arm of Basswood Lake which leads to Hoist Portage. The station is on the high rock point just after entering from the east the narrow east-and-west part of the arm. The station is on the bare ledge on the west slope and near the south end of the ridge, and is on the second step or shelf of rock from the top of the ridge.

Station mark: A drill hole within a triangle cut in the ledge.

Hair (Minnesota, Lake County; W. B. Fairfield, 1913).-On Basswood Lake, on the east shore of the arm that extends south to Hoist Portage. The station is at the east end of the narrow part of the arm, on the summit of the first high rock ridge up from the lake, on the bare granite ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Hub (Minnesota, Lake County; W. B. Fairfield, 1913).—On an island in Basswood Lake, about 250 by 350 meters in size, lying a few meters off the mainland on the east side of the entrance to the arm of the lake leading south to Hoist Portage. The island is the third and inner one of those lying along this shore of the entrance. The station is on the southeastern side of the island on a high-rock knoll.

Station mark: A drill hole within a triangle cut in the rock.

Hit (Minnesota, Lake County; W. B. Fairfield, 1913).-On the west shore of the bay of Basswood Lake just before entering the east-and-west narrow passage leading to Hoist Portage. There are three long narrow points on the west shore on the bay. The station is on the extreme tip of the middle point. A small round islet lies about 350 meters due east of the point. The station is on top of a granite ledge that runs up from the water.

Station mark: A drill hole within a triangle cut in the ledge.

Hilda (Minnesota, Lake County; W. B. Fairfield, 1913).—On the west shore of the southern arm of Basswood Lake. The station is on the tip of the long narrow outside point on the west side of the baylike entrance to the south arm of the lake which leads to Hoist Portage. The station is on a solid ledge about 4.5 meters back from the water's edge.

Station mark: A drill hole within a triangle cut in the ledge.

Habit (Minnesota, Lake County; W. B. Fairfield, 1913).—On a small rocky island in the wide part of Basswood Lake just before entering the south arm which leads to Hoist Portage. The island is about 1,700 meters northwest of Wind Bay and about 500 meters due west of the larger and timbered island upon which Leo Chosa had a fish house and several other houses at the time the station was established. The station is on the highest part of the rocky point at the west end of the island.

Station mark: A drill hole within a triangle cut in the rock.

Hat (Minnesota, Lake County; W. B. Fairfield, 1913).—On the large L-shaped island in Basswood Lake just west of the great turn of the lake from the west to the north and about one-half mile north of the entrance to Wind Bay. The station is on the solid ledge on the summit of the high hill on the south end of the island. Station mark: A bronze disk set in the solid ledge.

Hand (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south side of Basswood Lake, on the point on the west side of the entrance to Wind Bay. The station is on a large fixed rock on the north brow of the high hill on the point.

Station mark: A drill hole within a triangle cut in the rock.

**Hardy** (Minnesota, Lake County; W. B. Fairfield, 1913).—On a small, timbered island in Basswood Lake 600 meters due north of the entrance to Wind Bay and about 120 meters south of a large L-shaped island. The station is on a granite ledge on the highest part of the island.

Station mark: A drill hole within a triangle cut in the ledge.

Hank (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south shore of Basswood Lake. The station is on the summit of the high rocky hill on the peninsula at the east side of the entrance to Wind Bay. It is on the granite ledge on the highest part of the hill.

Station mark: A drill hole within a triangle cut in the ledge.

Hang (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south side of Basswood Lake, on the point just east of the first bay east of Wind Bay. The station is on the summit of the high, bare, rocky hill 250 meters south of the shore on the north side of the point and 350 meters east of the shore on the west side of the point.

Station mark: A drill hole within a triangle cut in the highest part of the granite ledge that caps the summit.

Grain (Minnesota, Lake County; W. B. Fairfield, 1913).—On the southernmost of the group of three small islands in Basswood Lake lying just south of the very large island around which the lake makes the great bend from west to north. The station is on the east end of the island on a granite ledge just south of the highest point. Station mark: A drill hole within a triangle cut in the ledge.

Guess (Ontario, Rainy River District; W. B. Fairfield, 1913).—On a small, low, brushy island in Basswood Lake about 20 meters in diameter. The island is the most southern one of the group of islands, large and small, lying in the entrance of Merriam Bay.

Station mark: A drill hole within a triangle cut in the only large fixed rock on the island.

Ham (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south shore of Basswood Lake. The station is on a rocky point 1% miles east of Wind Bay and directly south of the west entrance to Merriam Bay. It is on a granite ledge about 8 meters back from the point. There is another point of the shore, somewhat less prominent, 200 meters to the west of the station.

Station mark: A bronze disk set in the ledge.

Hag (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south shore of Basswood Lake, on the middle one of the three points of the shore line south of the two large islands lying in the entrance to Merriam Bay. It is about 4 meters back from the shore line on a large round fixed rock.

Station mark: A bronze disk set in the rock.

Haft (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south shore of Basswood Lake, south of the two big islands that lie in the entrance to Merriam Bay. The station is a little west of the most northern point of the shore line that is south of the islands. It is almost due south of the east end of the western one of the two large islands. It is on a large fixed rock about 4 meters back from the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

Gas (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the small island in Basswood Lake 100 meters south of the east end of the western one of the two large islands in the entrance to Merriam Bay. It is

2

on the southwestern part of the island, about 9 meters from the water's edge and about 4 meters above the lake level.

Station mark: A bronze disk set in the rock.

Gap (Ontario, Rainy River District; W. B. Fairfield, 1913; 1915) .- On a small low island in Basswood Lake 100 meters south of the south end of the long peninsula between Merriam and Bayley Bays. The station is on a large fixed rock on the highest part of the west end of the island.

Station mark: A drill hole within a triangle cut in the rock.

Game (Ontario, Rainy River District; W. B. Fairfield, 1913) .- On the north shore of Bayley Bay of Basswood Lake. There are two pronounced points or peninsulas on the north shore of the bay. The station is on a little rock point of the shore line, across a little bay, 250 meters west of the western one of the two peninsulas. It is on top of a solid granite ledge rising from the water's edge, about 8 meters back from the shore line and about 4 meters above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

Spin (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On an island at the eastern end of Basswood Lake, about 13/4 miles from Prairie Portage. The station is on the south point of the large island that lies just west of the narrows leading into the main body of the lake. It is on a rock outcrop near an old camp ground. No other rock is near it.

Station mark: A drill hole within a triangle cut in the rock.

Top (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On an island at the eastern end of Basswood Lake about 1¾ miles west of Prairie Portage. The station is on a small islet that lies just off the southeast tip of the large island just west of the narrows leading into the main body of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Rap (Ontario, Rainy River District; W. B. Fairfield, 1915) .- On the north shore near the east end of Basswood Lake. The station is on the point at the entrance to the narrows seven-eighths mile northwest of Prairie Portage.

Station mark: A drill hole within a triangle cut in the rock.

Fire (Minnesota, Lake County; W. B. Fairfield, 1915).—At the east end of Basswood Lake about 1,100 meters northwest of Prairie Portage. The station is on the east end of a small island near the south shore. It is on a small stone about 3 meters back from the water.

Station mark: A drill hole within a triangle cut in the stone.

Till (Ontario, Rainy River District; W. B. Fairfield, 1915) .- At the east end of Basswood Lake about 650 meters north of Prairie Portage. The station is on a small rocky islet just off the west point of the large island in the middle of the bay. It is near the center of the islet. Station mark: A drill hole within a triangle cut in the rock.

Trap (Minnesota, Lake County; W. B. Fairfield, 1915) .- On the south shore at the east end of Basswood Lake. The station is on the hill about 300 meters below Prairie Portage and just above the lumber camp. Station mark: A bronze disk set in the rock.

Rub (Minnesota, Lake County; W. B. Fairfield, 1915) .- On the south shore at the lower end of Sucker Lake. The station is on the big point about 250 meters up the lake from the dam at the outlet. It is about 27 meters from the water and about 7 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Feel (Ontario, Rainy River District; W. B. Fairfield, 1913).- At the west end of Birch Lake, on the very small island lying just inside the narrows from Sucker Lake. The station is on a small rock near the southwest shore, about 1.5 meters west from a large rock and about a meter above the lake level.

Station mark: A bronze disk set in the rock.

Fop (Minnesota, Lake County; W. B. Fairfield, 1913; 1914).-South of the east end of Basswood Lake. The station is on the summit of the high rocky ridge about 540 meters southwest of the dam at Prairie Portage. Station mark: A drill hole within a triangle cut in the solid rock.

Fent (Minnesota, Lake County; W. B. Fairfield, 1913; 1914).-On the south side of Birch Lake, near the west end of the lake. The station is on the bare rock summit of the high ridge about 300 meters back from the lake shore and 600 meters east of the neck of the peninsula that separates Sucker Lake from Birch Lake. Station mark: A drill hole within a triangle cut in the rock.

Fourth (Minnesota, Lake County; W. B. Fairfield, 1913).-On the south side of Birch Lake, about 1,900 meters southwest of Carp Portage, and about 700 meters south of the head of a long narrow bay. The station is on the summit of a hill, the highest point in the vicinity. The summit of the hill is a bare white rock. Station mark: A drill hole within a triangle cut in the rock.

Fitz (Minnesota, Lake County; W. B. Fairfield, 1913).—On the west side of Sucker Lake, about 800 meters due south of Prairie Portage. The station is on the summit of the high bare ridge of white granite, 500 meters back from the lake shore.

Station mark: A drill hole within a triangle cut in the rock.

Fat (Minnesota, Lake County; W. B. Fairfield, 1913).—On the west end of Birch Lake, on the prominent northeast point of the peninsula that separates Sucker Lake from Birch Lake. The station is on the bare rock point about 6 meters west of the extreme point.

Station mark: A bronze disk set in the rock.

Eckley (Ontario, Rainy River District; W. B. Fairfield, 1913).—On a small narrow island in Birch Lake, 1 mile east of the west end of the lake and near the middle of the widest part of the lake. The station is on the west end of the highest part of the island.

Station mark: A bronze disk set in the rock.

**Eave** (Ontario, Rainy River District; E. R. Martin, 1916).—On the north shore of the eastern narrows of Birch Lake, about three-fourths mile below Carp Portage. The station is on a ledge about 2.5 meters from the shore line and about 1 meter above the lake level.

Station mark: A drill hole in the ledge.

Fit (Minnesota, Lake County; E. R. Martin, 1916).—On the south shore of the eastern narrows of Birch Lake, about three-fourths mile below Carp Portage. The station is on the point of the shore about half way through the narrows. It is about 7 meters back from the water and about 3 meters above the lake level. Station mark: A drill hole in the ledge.

Erd (Ontario, Rainy River District; W. B. Fairfield, 1913).—About 120 meters north of the extreme west end of Carp Lake, and about 350 meters north of Carp Portage. The station is on the summit at the east end of a ridge about 30 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

First (Minnesota, Lake County; W. B. Fairfield, 1913).—On the high ridge, 650 meters southeast of the mouth of Melon Lake, which discharges into Carp Lake. The station is on the north brow of the ridge, about 90 meters east of the west end of the ridge and about 3 meters below the highest part. It is more than 60 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Econd (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the north side of Carp Lake, about 600 meters northeast of Carp Portage. The station is on a hillside of rough rock near the summit of the east end of a long ridge. It is about 200 meters back from the lake shore and about 30 meters above the lake level. Station mark: A drill hole within a triangle cut in a rock.

**Enough** (Ontario, Rainy River District; W. B. Fairfield, 1913).—On the north side of Seed Lake, about 1,250 meters west of the Knife Lake Dam across the outlet of Knife Lake, and about 250 meters northwest from the shore of Seed Lake. The station is on the summit of the high ridge which appears as a round white ledge as seen from the portage.

Station mark: A drill hole within a triangle cut in the ledge.

Faith (Minnesota, Lake County; W. B. Fairfield, 1913).—On the south side of the waterway between Knife and Carp Lakes, about 1,000 meters west of the Knife Lake Dam, and about 400 meters south of the waterway. The station is on the summit of the high ridge directly south of the enlargement of the river known as Portage Lake. The ridge terminates in a sharp rocky point capped with a solid granite ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Flora (Minnesota, Lake County; W. B. Fairfield, 1913).—About 200 meters southeast of the east end of Carp Portage. The station is on the highest point of the east end of the ridge, about 16 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Fest** (Minnesota, Lake County; W. B. Fairfield, 1913).—At the second rapids above Carp Lake, at the head of Melon Lake. The station is on the bare hard ledge about 3 meters south of the falls and a little above the water level of the stream above the falls. Extreme high water flows over the station.

Station mark: A bronze disk set in the ledge.

Exit (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north side of Knife Lake, about 600 meters east of the dam at the outlet of the lake. The station is on the east end of the ridge about 100 meters back from the lake shore.

Station mark: A drill hole within a triangle cut in the solid granite ledge of the summit.

Face (Minnesota, Lake County; W. B. Fairfield, 1912).—On the west end of Knife Lake, on the summit of the bold headland that splits the extreme west end of the lake, and lies just south of the entrance to the outlet and dam.

Station mark: A bronze disk set in the solid granite ledge of the summit.

Egg (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Knife Lake, near its west end The station is on the summit of the first high ridge north of the most western wide part of the lake and about 400 meters northwest of the western end of the large anvil-shaped island that chokes the channel of the lake at this point.

Station mark: A drill hole within a triangle cut in the smooth granite ledge of the summit.

Fink (Minnesota, Lake County; W. B. Fairfield, 1912).—On Knife Lake, about 1 mile from the extreme west end of the lake, on the large anvil-shaped island that chokes the channel of the lake. The station is on the summit of the high ridge on the western half of the island.

Station mark: A drill hole within a triangle cut on the smooth granite ledge of the summit.

**Flood** (Minnesota, Lake County; W. B. Fairfield, 1912).—On Knife Lake, about 1 mile from the extreme west end of the lake. The station is on a small granite islet that lies just off the extreme western tip of the large anvil-shaped island that chokes the channel of the lake. It is on the highest part of the islet, about 3 meters above the lake level.

Station mark: A bronze disk set in the granite ledge.

Early (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Knife Lake, near its western end. The station is on the peninsula on the west side of the outside entrance to Back Bay and north of the large anvil-shaped island that cuts the lake down to the narrow channels. It is on the highest point of the rocky peninsula, on a smooth granite ledge. Pulpit Rock is directly opposite the station on the anvil-shaped island across the channel.

Station mark: A drill hole within a triangle cut in the ledge.

Felix (Minnesota, Lake County; W. B. Fairfield, 1912).—On Knife Lake, about 1¼ miles from the extreme west end of the lake. The station is on the north shore of the large anvil-shaped island that chokes the channel of the lake. It is about midway between the east and west ends of the island, on the rock point of striking appearance known as Pulpit Rock. It is about 30 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Ember** (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Knife Lake, near the west end. The station is on the most southwestern point of the large irregular peninsula that incloses Back Bay. It is on the granite ledge about 3 meters from the water's edge.

Station mark: A bronze disk set in the ledge.

Edna. (See description of reference monument 888.)

Flay (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Knife Lake, about 1½ miles east of Big Knife Portage. The station is about 550 meters southeast of the eastern end of the large anvil-shaped island that chokes the channel of the lake. It is on the summit of a hill on a rounded point of the shore, about 100 meters back from the shore line, and about 18 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the ledge of the summit.

Flick (Minnesota, Lake County; W. B. Fairfield, 1912).—On a small low island in Knife Lake, lying in the entrance to a large bay, about 450 meters southwest of a large island, and about 400 meters south of the peninsula that incloses Back Bay. The station is near the center, and on the highest point of the island on a large fixed white rock.

Station mark: A drill hole within a triangle cut in the rock.

Elbow (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Knife Lake, on the most southeastern point of the irregular peninsula that incloses Back Bay. The point is opposite and 500 meters west from a large island off the south shore. The station is on the extreme southern end of the point, on an outcropping ledge about 8 meters back from the water's edge, and 8 meters above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

Eben (Minnesota, Lake County; W. B. Fairfield, 1912) .—On the northern of the two small islands that lie in the middle of Knife Lake, opposite the entrance to the most western of the three large southern bays or arms of the lake. The station is about midway between the east and west ends of the island and is on a solid ledge on the highest part of the island.

Station mark: A bronze disk set in the ledge.

Fad (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Knife Lake, on the southwest point of the promontory that lies between the two large eastern bays of the south side of the main body of the lake. The station is on the highest part of the point on a solid granite ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Earth (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the high rocky, timbered island in Knife Lake about 300 meters in length that lies near the middle of the lake, just west of the easternmost large bay in the south shore of the lake. The station is near the center of the island, on the highest point, on a smooth granite ledge.

Station mark: A bronze disk set in the ledge.

**Front** (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Knife Lake, on the high rocky point just west of the entrance to the first large bay after passing west through the narrows separating the eastern part of the lake known as Little Knife Lake from the main body of the lake. A very large island lies in the bay 500 meters east of the point, and there is a small island in the channel 300 meters west of the point. The station is on top of the cliff, about 2.5 meters from the edge.

Station mark: A drill hole within a triangle cut in the rock.

Fain (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Knife Lake, on the point 700 meters southwest of the narrows separating the eastern part, known as Little Knife Lake, from the main body of the lake. The point is on the east side or the entrance to a very large southern bay or arm of the lake. The station is on the top of the bluff about 100 meters east of the extreme end of the point. It is about 2 meters back from the face of the bluff.

Station mark: A drill hole within a triangle cut in the rock.

Earn (Ontario, Rainy River District; W. B. Fairfield, 1912).—On an island in Knife Lake that lies at the entrance to a bay, about 1,100 meters due west of the narrows separating the eastern section of the lake, known as little Knife Lake, from the main body of the lake. The station is on a granite ledge that extends into the lake on the east side of the island. It is back about 3.5 meters from the water's edge.

Station mark: A bronze disk set in the ledge.

Ear (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Knife Lake, on the low rocky point just north of the east end of the island that lies in the middle of the lake, about 1 mile west of the narrows that separates the eastern part of the lake, known as Little Knife Lake, from the main body of the lake. The station is on the granite ledge, about 3 meters from the water's edge.

Station mark: A drill hole within a triangle cut in the ledge.

Fall (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—On the south shore of Knife Lake, on the point on the south side of the narrows separating the eastern portion of the lake, known as little Knife Lake, from the main body of the lake. The station is about 4.5 meters back from the extreme tip of the point, on the highest part of a granite ledge.

Station mark: A bronze disk set in the ledge.

Fail (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Knife Lake, about 1¼ miles southwest of Little Knife Portage. The station is on the point around which the lake widens out into a large bay. It is about 8 meters from the water's edge, on the highest part of the granite ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Civil (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Knife Lake, about midway between the ends of the eastern section of the lake sometimes called Little Knife Lake. The station is on a point of the shore about where the lake begins to widen out. Two small islands lie offshore about 200 meters southwest of the point. The station is on the granite ledge that makes up from the water's edge on the point. It is about 2.4 meters back from the water's edge and 0.7 meter above the level of the lake.

Station mark: A drill hole within a triangle cut in the ledge.

Ease (Ontario, Rainy River District; W. B. Fairfield, 1912).—Near the north shore of Knife Lake and about midway between the ends of the eastern section of the lake sometimes called Little Knife Lake. The station is on the solid granite ledge on the highest part of the western of the two small islands lying in this part of the lake.

Station mark: A bronze disk set in the ledge.

Clerk (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—On the north shore of Knife Lake, on the first prominent timbered, granite point west of and about 1,000 meters distant from Little Knife Portage. The station is on a ledge on the first smooth knoll of the point.

Station mark: A bronze disk set in the ledge.

Daddy (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Knife Lake, on the bold granite point or bluff about 1,150 meters southwest of Little Knife Portage. The station is on the highest part of the granite bluff, about 8 meters above the level of the lake.

Station mark: A bronze disk set in the rock.

Fair (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south side of and near the east end of Knife Lake. The station is on the summit of the high, rocky, timbered ridge 350 meters south from the lake shore and nearly due south from the boundary stream between Cypress and Knife Lakes.

Station mark: A drill hole within a triangle cut in the granite ledge of the summit.

Clayton (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north side of the east end of Knife Lake. The station is on the summit of the high, timbered hill that rises from and to the west of the boundary stream between Cypress and Knife Lakes.

Station mark: A drill hole within a triangle cut in the solid ledge of the summit.

**Duluth** (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south side of the west end of Cypress Lake. The station is on top of the cliff about 60 meters east of the eastern portage between Cypress and Knife Lakes.

Station mark: A drill hole within a triangle cut in the rock.

Cinch (Ontario, Rainy River District; W. B. Fairfield, 1912; 1917).—On the north side of Cypress Lake, on the high, rocky, timbered ridge that 'ies to the west and on the prolongation of the first straight stretch of the lake west of the narrows. The station is on the highest part of the ridge on a rock knoll. It is about 300 meters northwest of the large island lying in the bend of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Dopfer** (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south side of Cypress Lake, near the western end of the lake. The station is on top of the high bare granite ledge, about 60 meters back from the lake shore, about 200 meters south of a prominent point of the shore, and about 400 meters south of the large island lying in the bend of the lake.

Station mark: A drill hole within a triangle cut in the ledge.

Claret (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north side of Cypress Lake. The station is on the summit of the first high, rocky, timbered cliff east of and about 600 meters distant from the place where the lake widens out and takes a turn to the south.

Station mark: A drill hole within a triangle cut in the solid granite ledge of the summit.

**Danny** (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south side of Cypress Lake, about midway between the ends of the lake and about 1,600 meters west of the most eastern narrows in the lake. The station is back on the side of the poplar-covered ridge about 100 meters south of a little narrow point or tongue of land that juts out from the shore into the lake. It is on a large, smooth, bare granite ledge among the poplars and just at the edge of the jack pines.

Station mark: A drill hole within a triangle cut in the ledge.

Circus (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north side of Cypress Lake, about midway between the ends of the lake, and about 900 meters east of where the lake widens out and makes a turn to the south. The station is on the second cliff east of the turn of the lake to the south. It is about 50 meters back from the lake shore on top of the cliff, on a solid ledge.

Station mark: A drill hole within a triangle cut in the ledge.

**Drub** (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Cypress Lake, about 2 miles northeast of Knife Portage, about 800 meters west of a great cliff facing west and at right angles to the shore line. The station is on a rock outcrop about flush with the ground, 3 meters back from the shore line, and 1.5 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Casket** (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Cypress Lake, about 2 miles northeast of Knife Portage, about 2,000 meters southwest of the narrows at the eastern forks of the lake. The station is on a hard rock ledge, about 2.5 meters above the water, about 0.6 meter back from a vertical face of the ledge, and about 3 meters back from another vertical face of the ledge.

Station mark: A drill hole within a trangle cut in the ledge.

Ducat (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south shore of Cypress Lake, about 1½ miles northeast of Little Knife Portage, about 260 meters south of a small island, and about 320 meters northeast of a large island. The station is about 12 meters above the lake level and 6 meters back from the shore line. Station mark: A drill hole within a triangle cut in the rock.

Duet (Minnesota, Lake County; W. B. Fairfield, 1912; 1917).-On the south shore of Cypress Lake, on the point directly south of the large island, about 1 mile northeast of Little Knife Portage. The station is on a bare ledge, about 6 meters back from the shore and 15 meters above the water.

Station mark: A drill hole within a triangle cut in the ledge. Reference monument 918, an 8-inch bronze post, is south 73° 41' west, 5.1 meters from the station.

Central (Ontario, Rainy River District; W. B. Fairfield, 1912) .- On an island in Cypress Lake, about three-fourths mile northeast of Little Knife Portage. The station is on the first small island in the broad bay of the north shore. It is about 8 meters from the east end of the island, 3 meters from the south side of the island, and 3 meters above the lake level.

Station mark: A bronze disk set in the rock.

Drove (Minnesota, Lake County; W. B. Fairfield, 1912).-On the south shore of Cypress Lake, about five-eighths mile northeast of Little Knife Portage. The station is on a little rock point opposite two small islands lying in the broad bay on the north shore of the lake. It is about 2 meters above the water and 1.2 meters back from the shore.

Station mark: A drill hole within a triangle cut in the rock near its back edge.

Cere. (See description of reference monument 919.)

Chafe. (See description of reference monument 917.)

Dub (Minnesota, Lake County; W. B. Fairfield, 1912; 1916).—At the extreme western end of Cypress Lake, on the eastern and larger of the two islands lying north of the entrance to the stream flowing into Knife Lake. The station is on the rocks, 8 meters back from the extreme western end of the island and about 6 meters above the lake level.

Station mark: A bronze disk set in the rock.

Dungeon (Minnesota, Lake County; W. B. Fairfield, 1912).-On the south side of Cypress Lake. On the rugged peninsula that lies south of the first narrows west of Swamp Portage. The station is on the high bare cliff on the southeast side of the peninsula, about 250 meters south of the narrows and 100 meters west of the shore line of the lake. It is about 6 meters south of the highest point of the ledge.

Station mark: A drill hole within a triangle cut in the ledge.

Doxey (Minnesota, Lake County; W. B. Fairfield, 1912).—On the south side of Cypress Lake, about 500 meters due south of the first narrows west of Swamp Portage. The station is on a high bare granite cliff about 100 meters south of the lake shore. It is on the smooth rock about 3 meters back from the edge of the cliff. A peculiar backbone formation of the rock extends back and upward from the station into the heavy timber.

Station mark: A drill hole within a triangle cut in the rock.

Click (Ontario, Rainy River District; W. B. Fairfield, 1912).-On the north shore of Cypress Lake, about 650 meters east of the first narrows west of Swamp Portage. The station is on a little sharp point of the shore line which is otherwise nearly straight for some distance in either direction. It is on the flat ledge that extends out into the lake about 6 meters beyond the timber line, about a meter from the water's edge, and 0.3 meter above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

Crupper (Ontario, Thunder Bay District; E. R. Martin, 1917).-On a little knob between Rat and Rose Lakes. The station is on a rock ledge.

Station mark: A drill hole in the ledge.

Cephas (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north side of the east end of Cypress Lake, on the high rocky hill with a smooth bare granite ledge on the south side, that lies just north of the small pondlike eastern end of the lake. The station is on the bare ledge of the summit, about 8 meters south of the highest point.

Station mark: A drill hole within a triangle cut in the ledge.

Dwarf (Minnesota, Lake County; W. B. Fairfield, 1912) .- On the first high ridge south of Swamp Portage, between Swamp and Cypress Lakes. The station is on a solid ledge on the highest point of the ridge. Station mark: A drill hole within a triangle cut in the ledge.

Cairo (Ontario, Rainy River District; W. B. Fairfield, 1912).-On the summit of the hill just north of the west end of Swamp Lake. The station is about 70 meters back from the lake shore and about 260 meters east of Swamp Portage.

Station mark: A drill hole within a triangle cut in the solid granite ledge of the summit.

Daft (Minnesota, Cook or Lake County; W. B. Fairfield, 1912).-On the summit of the high ridge just southeast of Swamp Lake and about 400 meters southwest of the short portage.

Station mark: A drill hole within a triangle cut in the solid granite ledge of the summit.

**Clash** (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the summit of the ridge about 100 meters east of Swamp Lake and 300 meters north of the short portage. The station is 30 meters west of the highest point of the summit, where there is a large black bowlder.

Station mark: A drill hole within a triangle cut in the solid granite ledge of the summit.

**Cartoon** (Ontario, Rainy River District; W. B. Fairfield, 1912; 1921).—On the east side of Swamp Lake, and on the north side of the outlet of the lake into Saganaga Lake. The station is between the short portage trail and the creek, closer to the creek than to the trail, and near Swamp Lake. It is about 0.2 meter above the water.

Station mark: A bronze disk set in rock. Reference monument 945 is north 16° 45′ east, 21 meters from the station.

**Captor** (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Swamp Lake, about 600 meters northeast of the east end of Swamp Portage. The station is on a ledge outcrop about 2 meters back from the shore line and 1.5 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the ledge.

**Depot** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, near the west end of the lake and just opposite the mouth of Cache Bay. A small island lies about 130 meters offshore, directly in front of the station. The station is on a large, smooth, rounded bowlder, about 2 meters from the shore line.

Station mark: A drill hole within a triangle cut in the bowlder.

Cringe (Ontario, Rainy River District; W. B. Fairfield, 1912).—On the north shore of Saganaga Lake, about 300 meters east of the entrance to Cache Bay. The station is on the summit of a point of rock at the shore line; it is on a hard place in the disintegrated rock, about 3 meters south of a sharp rock point.

Station mark: A drill hole within a triangle cut in the rock.

**Crusoe** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the western one of the west group of islands lying in the main body of open water of Saganaga Lake. The island is hook-shaped, and lies just north of Rocky Point, where the lake narrows down into its western arm. The station is on the point of the hook, which is also the south point of the island.

Station mark: A drill hole within a triangle cut in the solid bare ledge of the point.

Cuyo (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the eastern one of two small rocky islands in Saganaga Lake that lie about 100 meters south of the largest island of the western group of islands lying in the western part of the main body of the lake. The station is on the south end of the island, about 15 meters from the water's edge, and about 8 meters above the lake level.

Station mark: A drill hole within a triangle cut in the granite ledge.

**Depend** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—Near the middle of Saganaga Lake, on the north side of a small wooded island lying on the south side of the main body of open water of the lake. The island is the most northwestern one of the fringe of islands that lie along the southern side of the main body of the lake. The station is on the north side of the solid granite point that projects beyond the timber line. It is about 4.5 meters from the extreme end of the point, and about 1.5 meters above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

**Clam** (Ontario, Thunder Bay District; W. B. Fairfield, 1912; 1917).—On the southern point of a small rocky island near the middle of the main body of open water of Saganaga Lake. The island is the second from the west in the eastern group of islands. The station is on the highest point of the smooth granite ledge that forms the point. It is about 2.5 meters above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

Cider (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the extreme western end of the most western of a group of three small islands lying in the main body of Saganaga Lake, about north 30° west, 1 mile from where the international boundary passes out from among the islands into the open water of the lake. The station is on the granite ledge of the extreme point of the island.

Station mark: A drill hole within a triangle cut in the ledge.

**Charles** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the north shore of Saganaga Lake, nearly opposite the passage between the islands through which the international boundary enters the main body of the lake. The station is on a point on the east side of a little bay, on the top of a smooth granite bluff.

Station mark: A drill hole within a triangle cut in the rock.

**Claw** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the most southwestern point of the large island in Saganaga Lake that lies just northeast of the narrow passage through which the international boundary running westward first passes out into the open water of the main body of the lake. The station is on the solid granite ledge, 2 meters back from the water's edge, and 1.5 meters above the lake level.

Station mark: A bronze disk set in the ledge.

Dilke (Minnesota, Cook County; W. B. Fairfield, 1912).—On an island in the eastern part of Saganaga Lake, about 2,300 meters west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the southwest point of an island which is about 250 meters in diameter and lies about 350 meters to the southwest of the southwest end of the largest island in the lake. It is on a solid granite ledge, 2.5 meters back from the water's edge, and 1.5 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the ledge.

**Camp** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west point of an island in Saganaga Lake, about 200 meters in diameter and 200 meters west of a very large island. The small island on which the station is located is about 1,750 meters northwest of Saganaga Falls at the entrance to the lake. The station is on a bare flat-topped granite ledge a little above high-water mark.

Station mark: A bronze disk set in the rock.

**Doily** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, about 1,500 meters north 80° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake, and south 23° west, 380 meters, from the most western point of the first very large island in the lake. The station is off a point at the west side of the entrance to a small bay. It is on a flat granite rock about 1.5 by 2.5 meters in area, which lies off the mainland about 4.5 meters and whose top is near high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

Calyx (Minnesota, Cook County; W. B. Fairfield, 1912).—On an island in Saganaga Lake, about 1,450 meters north 63° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the northwestern point of the first very large island in the lake. The station is on a flat-topped rock with several broken rocks about it, 8 meters back from the extreme end of the point, and about 2.5 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

**Caboose** (Minnesota, Cook County; W. B. Fairfield, 1912).—On an island in Saganaga Lake, about 1,150 meters northwest of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the southwestern point of the first very large island northwest of the mouth of the stream, and is at the west end of the strait which separates the island from the mainland. The station is on a cliff about 9 meters above the water, 3 meters back from the edge of the cliff, and 1.5 meters in front of a 1-meter rise of the rock.

Station mark: A drill hole within a triangle cut in the rock.

**Doff** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, about 1,150 meters north 70° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake, and south 40° east, 300 meters from the most western point of the first very large island in the lake. The station is on a point of the shore just west of a little bay. It is on a cliff, 3 meters above the water, and 1 meter back from the edge of the cliff and the shore line.

Station mark: A drill hole within a triangle cut in the rock.

**Dodge** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—On the south shore of Saganaga Lake, about 950 meters northwest of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on a granite point near the middle of the south shore of the strait separating the first very large island from the mainland. It is about 1.5 meters back from the shore line and 1.5 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Dock** (Minnesota, Cook County; W. B. Fairfield, 1912; 1917).—Near the head of Saganaga Lake, about 950 meters northwest of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The station is on a point of the mainland on the south shore of the most southern channel or strait leading to the main body of the lake, and about 270 meters west of the most northeastern point of the mainland. It is on the rocky point near high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

**Cafe** (Minnesota, Cook County; W. B. Fairfield, 1912).—On an island in Saganaga Lake, about 1,000 meters northwest of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on a point of the south shore of the first very large island north of the mouth of the stream. It is near the east end of the strait separating the island from the mainland, and is about 600 meters from the east end of the island. It is on the third point west of a large bay indenting the shore of the island. The station is on the rocky point, about 1.5 meters back from the shore line, and about 1 meter above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Dizzy (Minnesota, Cook County; W. B. Fairfield, 1912).—At the head of Saganaga Lake, on the most northeastern point of the mainland west of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake, and about 750 meters distant in a northwesterly direction from the mouth of the stream. A small island lies directly off the point. The station is on the rocky point about 10 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

## APPENDIX V

**Center** (Minnesota, Cook County; W. B. Fairfield, 1912).—At the head of Saganaga Lake, on the west side of an island which is about 350 meters long north and south and about 150 meters across east and west. The island lies about 200 meters due north of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on a small but conspicuous round peninsula near the middle of the west shore of the island. It is on a granite rock nearly a meter across, whose top is about 2 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Divan** (Minnesota, Cook County; W. B. Fairfield, 1912).—At the head of Saganaga Lake, on the end of a long narrow point on the north side of the bay just northwest of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The tip of the point is about 450 meters northwest of the mouth of the stream. The station is about 2 meters south of the extreme end of the point and about 1 meter above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Candor** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On an island in Saganaga Lake, about 1,800 meters due northwest of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The station is on the south shore of the largest island in the lake, on a rounding point 450 meters west of the strait that separates the island from the mainland. It is on a flat triangular rock measuring about a meter on each side, and is about 0.3 meter below high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

**Canton** (Minnesota, Cook County; W. B. Fairfield, 1912).—About 1,650 meters northwest of the mouth of the stream flowing into Saganaga Lake from Maraboeuf (Gneiss) Lake, and on the most northwestern point of the first very large island northwest of the mouth of the stream. The station is at the west end of the channel between this island and the island to the north, which is the largest island in the lake. It is on a bare granite ledge, about 4 meters from the extreme point, about 2 meters east of the shore line, and about 0.6 meter above highwater mark.

Station mark: A drill hole within a triangle cut in the rock.

**Draft** (Minnesota, Cook County, W. B. Fairfield, 1912).—About 2,100 meters north 78° west of the mouth of the stream flowing into Saganaga Lake from Maraboeuf (Gneiss) Lake. The station is on the southeastern point of an island which is about 300 meters in diameter. It is on a flat rock about 0.6 by 1.3 meters in size, 4.3 meters back from the shore line, and 2.4 meters above the water level.

Station mark: A drill hole within a triangle cut in the rock.

**Dowel** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, about 1,900 meters west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the point at the east side of the entrance to a large bay that deeply indents the shore. It is on a point of broken granite rocks.

Station mark: A drill hole within a triangle cut in a rock.

**Draggle** (Minnesota, Cook County; W. B. Fairfield, 1912).—On an island in the eastern part of Saganaga Lake, about 2,800 meters north 85° west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The island is about 1,000 meters long east and west, about 500 meters across north and south, and is nearly split in two by a small inlet on its east shore and a deep inlet on its west shore, the heads of the two inlets nearly meeting. The station is on a little point about 100 meters west of the extreme southeast point of the island, on a rock 0.8 by 1.5 meters in size, on the shore line, and at high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

Detect (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, about 2,700 meters west of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is on the bluff point where the shore line turns abruptly from a general southwesterly course to a due southerly course as the lake widens out into the two long southern arms. A group of five small islands lies just off the point to the north and between the point and the large wooded island which is nearly divided in two, east and west. The station is on the solid ledge about 3 meters back from the edge of the bluff.

Station mark: A drill hole within a triangle cut in the ledge.

**Dunk** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the southwestern point of the large rocky, wooded island in Saganaga Lake that lies on the north side of the passage as one enters from the east into the large body of water from which the two long arms of the lake extend south into Minnesota. The east end of the island is very high and rocky; the west end is not so high but has bluff shores. The island is nearly divided from east to west by inlets on the east and west shores. The station is about 15 meters above the lake level, on top of a solid granite bluff.

Station mark: A drill hole within a triangle cut in the rock.

Dido (Minnesota, Cook County; W. B. Fairfield, 1912).—On a small rocky islet in Saganaga Lake that lies near the center of the open water in the large bay from which the two long arms of the lake extend south into

560

Minnesota. Another, slightly larger, island lies about 100 meters south of this island; other than this there are no islands within a radius of approximately one-half mile. The station is near the center of the island, on a large rock, about 6 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Delve** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west point of an irregularly shaped island in the eastern part of Saganaga Lake, about 400 meters long east and west, that lies just off the entrance to a deep bay in the large wooded island to the east. The island upon which the station is located is one of a group of about a dozen small islands lying between the main body of the lake and the large bay from which the two long arms of the lake extend south into Minnesota; there are two small rocky islets about 200 meters south of the station. The station is on the rocky point about 7 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Dayton** (Minnesota, Cook County; W. B. Fairfield, 1912).—On a large rocky, wooded island in Saganaga Lake lying on the northwest side of the large bay from which the two long arms of the lake extend southward into Minnesota. The island is about 1 mile long east and west and about one-half mile wide north and south. It is very irregular in shape, being divided into three irregular lobes by three inlets, one on the east, one on the south, and one on the west side, that nearly meet in the middle of the island. Passages on either side of the island lead from the bay into the main body of the lake. The station is on the most eastern point of the island, on a flat ledge that rises 3 meters sheer from the water. It is about 2 meters back from the edge of the ledge.

Station mark: A bronze disk set in the ledge.

**Duplex** (Minnesota, Cook County; W. B. Fairfield, 1912).—On a high, rocky, timbered island in Saganaga Lake at the entrance to the eastern of the two long southern arms of the lake. The island is oval with its major axis of about 200 meters lying north and south. Its minor axis is about 100 meters long. Two small rocky islets lie just southeast of the island, about 100 meters distant. The station is on the highest point of the granite-capped summit of the island, about 20 meters above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

**Dunder** (Minnesota, Cook County; W. B. Fairfield, 1912).—On a small wooded island in the southern part of Saganaga Lake, north of the point between the two long southern arms of the lake. A large island lying next to the shore of the point is about 300 meters southwest of the island upon which the station is situated. The station is on the southeast point of the island.

Station mark: A drill hole within a triangle cut in the solid granit ledge of the point.

Dinny (Minnesota, Cook County; W. B. Fairfield, 1912).—On the east end of the southern and larger of the two large islands that lie on the south side of the main open body of Saganaga Lake and just south of the boundary line The island is very irregular in shape and is more than a mile long in a northeast and southwest direction. The station is on the outside point on the southwest side of the entrance to a deep bay in the island. Station mark: A drill hole within a triangle cut in the rock point near the water.

**Diggs** (Minnesota, Cook County; W. B. Fairfield 1912).—On the south end of an island in Saganaga Lake lying about 800 meters north of the mainland between the two long southern arms of the lake. The island is about 400 meters long north and south and 200 meters wide east and west. It lies just east of the southern of two very large islands. The station is on top of a rock bluff 8 meters high, on the extreme southern point of the island. It is about 3 meters back from the edge of the bluff.

Station mark: A drill hole within a triangle cut in the rock.

Dutch (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south side of Saganaga Lake, on the peninsula on the west side of the entrance to the eastern of the two long southern arms of the lake. The station is on the high granite knoll 800 meters south of the north end of the peninsula. There is another knoll nearly as high 150 meters to the west. The peninsula is cut nearly in two by an inlet from the east at a point 200 meters south of the station. The station is 20 meters southwest of the highest point of the summit.

Station mark: A drill hole within a triangle cut in the bare granite ledge.

**Dun** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, on the point between the two long southern arms of the lake, about halfway between the two arms. The station is on a high granite ledge about 150 meters south of the head of a narrow inlet from the channel that lies between the mainland and a large island to the north.

Station mark: A drill hole within a triangle cut in the solid ledge.

Daily (Minnesota, Cook County; W. B. Fairfield, 1912).—On the most northern point of the large island in the southern part of Saganaga Lake that lies adjacent to the shore line of the point between the two long southern arms of the lake, and about midway between the two arms. The station is on the low rocky point, on a large fixed rock, 3.5 meters from the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

96030-31-37

**Driver** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the rocky north point of a small island, in the southern part of Saganaga Lake that lies 200 meters offshore 1,700 meters northeast of the entrance to the western of the two long southern arms of the lake. There is another island of about the same size as this one, about 150 meters to the east, and a group of three small islands about 200 meters to the west. The station is at the extremity of the point on a white flat rock about 4 by 6 meters on top and 1.2 meters high. The point appears white for a long distance.

Station mark: A drill hole within a triangle cut in the rock.

**Duff** (Minnesota, Cook County; W. B. Fairfield, 1912).—On a small rocky island, in the southern part of Saganaga Lake, that lies in the entrance to a bay on the south shore of the second large island northeast of the entrance to the western of the two long southern arms of the lake. The station is on the western point of the island, about 20 meters from the extreme tip of the point and about 6 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Delhi** (Minnesota, Cook County; W. B. Fairfield, 1912).—On Gold Island in the southern part of Saganaga Lake, just north of the entrance to the western of the two long southern arms of the lake. The station is on the southern point of the island, which is so called from an abandoned gold mine.

Station mark: A drill hole within a triangle cut in the rock of the point.

Digit (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Saganaga Lake, on the point on the east side of the entrance to the western of the two long southern arms of the lake. The station is on top of the rocky bluff of the shore line, about midway of the northwest face of the point. It is on a large fixed rock, about 6 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Define** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the north end of the island, in the southern part of Saganaga Lake, that lies in the entrance to the western of the two long southern arms of the lake. It is on the bluff, about 2 meters back from the edge. The bluff appears red as seen from a distance.

Station mark: A drill hole within a triangle cut in the rock.

**Cement** (Minnesota, Cook County; W. B. Fairfield, 1912).—At the head of Saganaga Lake, on the south end of an island which is about 350 meters long north and south and about 150 meters across east and west. The island lies about 200 meters due north of the mouth of the stream flowing into the lake from Maraboeuf (Gneiss) Lake. The station is about 50 meters from the southern end of the island, about midway between the east and west shores. It is on a rock about 1 meter across and 0.6 meter high.

Station mark: A drill hole within a triangle cut in the rock.

Dire (Minnesota, Cook County; W. B. Fairfield, 1912).—At the head of Saganaga Lake, on the point on the west side of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The station is on the smooth granite ledge near high-water mark.

Station mark: A bronze disk set in the ledge.

Cede (Minnesota, Cook County; W. B. Fairfield, 1912).—At the head of Saganaga Lake, on a small, low, timbered island lying 50 meters offshore on the west side of the mouth of the stream flowing from Maraboeuf (Gneiss) Lake. The station is on the highest rock on the south end of the island and about 1 meter above the water level.

Station mark: A bronze disk set in the rock.

**Dispel** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west bank of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes. The station is about 100 meters below Saganaga Falls and about 200 meters above Saganaga Lake. It is on the middle of a point of the shore line, 10 meters west of the shore, on a rock 0.6 by 0.9 meter in size.

Station mark: A drill hole within a triangle cut in the rock.

Catkin (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east bank of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes. The station is about 100 meters below Saganaga Falls, on the first step of the granite ledge, 4 meters back from the shore and 9 meters above the level of the water. A very large white pine tree stands 3 meters south of the station.

Station mark: A drill hole within a triangle cut in the ledge.

**Castle** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of the connecting stream between Maraboeuf (Gneiss) and Saganaga Lakes. The station is about 100 meters above Saganaga Falls, on an outcrop of a white granite ledge on the point of the ridge, about 60 meters back from the shore line and about 6 meters above the water level. A Norway pine tree 50 centimeters in diameter stands 2 meters east of the station.

Station mark: A drill hole within a triangle cut in the ledge.

Ding. (See description of reference monument 986.)

Dike. (See description of reference monument 988.)

**Case** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of the stream connecting Maraboeuf (Gneiss) and Saganaga Lakes, about 425 meters below Horsetail Rapids, 650 meters above Saganaga Falls, and directly opposite a small bay on the west shore. The station is 1 meter below extreme high-water mark and near the shore line.

Station mark: A drill hole within a triangle cut in the rock.

Dice (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west bank of the stream flowing from Maraboeuf (Gneiss) Lake into Saganaga Lake, 425 meters below Horsetail Rapids. The station is on a well-defined point at the widest place in the river. It is on a large bare granite rock 3 meters from the water and 2 meters above the level of the water.

Station mark: A drill hole within a triangle cut in the rock.

Dense. (See description of reference monument 992.)

**Decree** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, on a rounding point 400 meters south of Horsetail Rapids and opposite the bay which lies east of the rapids. The station is on the tip of an irregularly shaped, pointed-topped granite rock about 1 meter across. Station mark: A bronze disk set in the rock.

**Cope** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of Maraboeuf (Gneiss) Lake, near the north end of the lake, about 100 meters south of the entrance to the bay which lies east of Horse-tail Rapids. The station is on a trapezoidal rock, about 1.5 meters back from the shore line and 1 meter above the water level.

Station mark: A drill hole within a triangle cut in the rock.

**Decoy** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, near the north end of the lake, 600 meters south of Horsetail Rapids. The station is on a prominent rounding point of the shore, on a rock on the shore line near high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

**Cant** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of Maraboeuf (Gneiss) Lake, on the point at the entrance to the most northern narrow reach of the lake. The station is five-eighths mile south of Horsetail Rapids, on the west side of the point, on the steep side hill, 3 meters back from the edge of the water and 4 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Decline** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, five-eighths mile south of Horsetail Rapids and just abreast of a high, pinnacle-like island. The station is on a small stone on the shore line just below high-water mark.

Station mark: A bronze disk set in the stone.

**Canter** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the high pinnaclelike island that lies at the entrance to the most northern narrow extension of Maraboeuf Lake. The island is about 1,000 meters south of Horsetail Rapids. The station is on the west side of the island, on the steep hillside, on a rock 4 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

**Davis** (Minnesota, Cook County; W. B. Fairfield, 1912).—On a rock in the northern part of Maraboeuf (Gneiss) Lake. As approached from the south the station is just off the end of the long narrow point that lies 500 meters west of the narrows where the lake last widens out into a broad expanse. The station is on a large rock that emerges from the water to a height of approximately 6 meters. It is on the highest part of the smooth summit of the rock.

Station mark: A drill hole within a triangle cut in the rock.

**Deck** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, on the second point of the shore in the narrows south of the northern expansion of the lake, about 1½ miles south of Horsetail Rapids. The station is on a prominent flat point just south of a little half-circle bay, on a rock, about 1 meter from the shore line and 0.7 meter above the lake level.

Station mark: A bronze disk set in the rock.

**Dean** (Minnesota, Cook County; W. B. Fairfield; 1912).—On the west shore of Maraboeuf (Gneiss) Lake, on the point 325 meters northwest of the second island in the north-and-south reach of the lake as approached from the south. A small granite island lies directly east of the station. The station is on a shattered rock cliff about 8 meters above the water.

Station mark: A bronze disk set in the rock.

**Cancil** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of Maraboeuf (Gneiss) Lake, on the middle point between the two long eastern arms of the lake and 250 meters north of the north end of the island lying off the entrance to the southern of the two eastern arms. The station is on top of a ledge with a precipitous face, about 2 meters from the edge of the ledge and about 3 meters above the water.

Station mark: A drill hole within a triangle cut in the ledge.

Daze (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, opposite the north end of the second island in the north-and-south reach of the lake as approached from the south. The island lies off the entrance to the first long eastern arm of the lake. The station is on top of a cliff about 10 meters above the water, at a point where the top of the cliff curves down toward the water.

Station mark: A drill hole within a triangle cut in the rock.

Calm (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—In Maraboeuf (Gneiss) Lake, on the north end of the island lying off the entrance to the first long eastern arm of the north-and-south reach of the lake. The station is on a piece of rough granite, about 5 meters back from the shore line and 5 meters above the lake level.

Station mark: A bronze disk set in rock.

**Dawn** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, on the point of the shore opposite the entrance to the first long eastern arm of the lake as approached from the south through the north-and-south reach of the lake. The south end of the island lying off the entrance to the eastern arm bears nearly due east 200 meters distant from the station. The station is on a rock about 0.6 by 1 meter in cross section and 0.3 meter high. It is about 1 meter back from the shore line and 1 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Daub** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake. As approached from the south the station is on a little point of the shore just north of the first prominent bay on the west shore of the long north-and-south reach of the lake. An island lying off the entrance to a large bay on the east shore is about 275 meters southeast of the station, and an island lying off the entrance to the first long eastern arm of the lake is about 275 meters northeast of the station. The station is on a prominent moss-covered granite ledge which has a slope of 30°. It is about 4 meters back from the shore line and 3 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Cake (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the first island in the north-and-south reach of Maraboeuf Lake as approached from the south. The island lies off the entrance to the first bay on the east side of the north-and-south reach. The Devil's Portage trail leaves the head of this bay.

Station mark: A bronze disk set in the rock.

**Dart** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake a little north of the middle of the first narrow north-and-south reach of the lake as approached from the south and about 400 meters south of the island at the north end of the reach. The station is on a sharp point of the shore line, just north of a little cove that lies at the mouth of a canyon in the steep hillside bordering the shore. It is 6 meters back from the shore line and 12 meters above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Cadet** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of Maraboeuf (Gneiss) Lake, about two-thirds of the way through the first narrow north-and-south reach of the lake as approached from the south. The station is on a granite shelf about 7 meters above the water and about 6 meters back from the shore line.

Station mark: A drill hole within a triangle cut in the rock.

**Droop** (Minnesota, Cook County; W. B. Fairfield, 1912).—On the west shore of Maraboeuf (Gneiss) Lake, about midway of the first narrow north-and-south reach of the lake from the south. The station is on a sharp rocky point, just south of a little cove that lies at the mouth of a canyon in the steep hillside bordering the shore. It is on a rock about 1 by 1.5 by 2 meters in size, about 18 meters back from the water and 18 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Canal (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of Maraboeuf (Gneiss) Lake, near the middle of the first narrow north-and-south reach of the lake as approached from the south. The station is on the top of a rough-topped cliff, 15 meters above the lake, and 9 meters back from the shore line. Station mark: A drill hole within a triangle cut in the rock.

Device (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Maraboeuf (Gneiss) Lake. The station is on the tip of the long narrow bluff point that projects north into the lake from the south

shore, due south of the entrance to the lake, and 450 meters west of the extreme southeastern extremity of the lake. It is about 4.5 meters back from the shore and 4.5 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Crisp (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the north side of Maraboeuf (Gneiss) Lake, on the first high, rocky, rounded, wooded hill after passing through the narrows from Round Lake. The station is about 150 meters back from the shore, on the solid rock ledge on the summit of the point. It is abreast of the first small island at the head of the lake.

Station mark: A drill hole within a triangle cut in the ledge.

Chirp (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the west shore of the connecting stream (Devils Elbow) between Round and Maraboeuf (Gneiss) Lakes, on the bluff point 200 meters south of the southeast end of Devils Elbow Portage. The station is on top of the granite slope 45 meters back from the water and 10 meters above the water.

Station mark: A drill hole within a triangle cut in the rock.

**Cark** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the north shore of the stream known as Devils Elbow between Round and Maraboeuf (Gneiss) Lakes. The station is at the southeast end of Devils Elbow Portage, on a large rock near high-water mark.

Station mark: A bronze disk set in the rock. Reference monument 1015 bears north,  $68^\circ$  51' west, 29.7 meters from the station.

Climb (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the north shore of the connecting stream (Devils Elbow) between Round and Maraboeuf (Gneiss) Lakes. The station is on the rounding point 120 meters east of the southeast end of Devils Elbow Portage. It is on a bare granite point, on a bowlder 0.6 meter in diameter, 2 meters from the water's edge and 1.5 meters above the water.

Station mark: A bronze disk set in the bowlder.

Desk (Minnesota, Cook County; W. B. Fairfield, 1912).—On the south shore of Devils Elbow between Maraboeuf (Gneiss) and Round Lakes. The station is on the most northern point of the peninsula that lies in the crook of the "Elbow." It is on a cleared granite point about 4 meters back from the extreme point of the rock and on the first flat place, about 2.5 meters above the water.

Station mark: A bronze disk set in the rock.

**Creek** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the north shore of Devils Elbow, 500 meters west of the outlet of Round Lake, on the point in front of the "Camp Ground." The station is near the point of curvature of the granite shore, about 1 meter above high-water mark and 0.8 meter back from the edge of the rock.

Station mark: A drill hole within a triangle cut in the rock. Reference monument 1023 bears north,  $16^{\circ} 47'$  west, 26.0 meters distant from the station.

**Carve** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the north shore of the narrows at the outlet of Round Lake, 230 meters west of the lake. The station is on a prominent point of rock, 1.5 meters above the water, 0.6 meter east of an edge of the rock, and 2.1 meters south of an edge of the rock.

Station mark: A drill hole within a triangle cut in the rock.

Color. (See description of reference monument 1025.)

**Cent** (Ontario, Thunder Bay District; W. B. Fairfield, 1912).—On the east shore of Round Lake, on the point at the north side of the most eastern bay of the lake, about 200 meters east of the large island in the center of the lake. The station is about 8 meters northeast of the point of the rock and about 3 meters above high-water mark.

Station mark: A drill hole within a triangle cut in the rock.

Dive (Minnesota, Cook County; W. B. Fairfield, 1911; 1912).—On the high ridge about 500 meters west of the Swamp Portage trail on Granite River.

Station mark: A drill hole in the rock.

Dilly (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west side of Granite River, about threefourths mile below Granite Lake. The station is on the summit of a detached hill, the second one back and west of the river. It is about 230 meters due west of the river, about 310 meters northeast of the north end of the Swamp Portage trail, and about 35 meters above the level of the river. It is on the top of a roughly triangular granite nub 1.5 by 2.5 by 2.5 meters in size.

Station mark: A drill hole within a triangle cut in the rock.

Ditts (Minnesota, Cook County; W. B. Fairfield, 1911).—On the east side of the third and largest pond or lake in Granite River below Granite Lake, about 320 meters north of the north end of the Swamp Portage trail. The station is on a granite nub on a burned-over hillside, 50 meters back from the shore line and about 15 meters above the lake level. There is a small rocky island, abreast the station, about 130 meters offshore that is on line between the outlet of the lake and the station.

Station mark: A drill hole within a triangle cut in the rock.

Chap. (See description of reference monument 1045.)

**Damper** (Minnesota, Cook County; E. R. Martin, 1917).—On the west side of Granite River, about threefourths mile above Round Lake. The station is on the southwest side of the islandlike point at the foot of the second rapids above Round Lake.

Station mark: A drill hole in rock.

Cotter (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1921).—On the east side of Granite River, about 300 meters above the rapids and narrows which are at the mouth of the river. The station is on a rocky bluff near the shore line.

Station mark: A drill hole within a triangle cut in the rock. Reference monument 1037 is 8.9 meters southeast of the station.

**Dream** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west shore of Granite River, just above the rapids and narrows which are at the mouth of the river. The station is about 45 meters south of the east end of the portage around the rapids into Round Lake.

Station mark: A drill hole in the rock. Reference monument 1026 is 14.6 meters northwest of the station.

**Diston** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west bank of Granite River, 1,200 meters below the entrance to Granite Lake and 150 meters upstream from the first rapids below Granite Lake. The station is on the first granite head upstream from the rapids. It is 24 meters above the level of the water and 40 meters back from the shore line of the river.

Station mark: A bronze disk set in a drill hole in the rock.

Cuttle (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the east bank of Granite River, about 200 meters upstream from the first rapids below Granite Lake. The station is on a granite shelf, about 6 meters above the water level and about 4 meters back from the shore line. Station mark: A bronze disk set in a drill hole in the rock.

Crumb. (See description of reference monument 1055.)

**Cutty** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of the second pond in Granite River below Granite Lake, about 100 meters northwest of the second rapids below Granite Lake and about 130 meters northeast of the third rapids. The station is on the most northern point of the shore line, on a ridge-shaped rock lying in a little niche in the shore.

Station mark: A bronze disk set in the rock. Reference monument 1053 is 18 meters east of the station.

**Cabot** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—At the west end of Granite Lake, on the summit of the granite hill on the north side of the entrance to the lake. The station is about 300 meters east of the entrance, about 50 meters north of the shore line, and about 20 meters above the level of the lake. It is 0.3 meter below and 6 meters east of the highest point of the hill.

Station mark: A drill hole within a triangle cut in the rock.

**Disco** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west shore of Pine Lake, on the bluff point at the north end of the narrows of the lake. The station is about 30 meters back from the shore line and about 19 meters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

**Dragon** (Minnesota, Cook County; W. B. Fairfield, 1911; 1921).—On the west shore of Pine Lake, on the rocky point just east of a prominent bay and west of the place where the lake suddenly narrows to about half its former width. A small wooded island (No. 9) lies off the point about 150 meters to the south. The station is on a large rock about 2 meters from the shore line and about 0.5 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

City. (See description of reference monument 1073.)

**Dune** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west shore of Pine Lake, opposite and about 470 meters northwest by west of the west end of the Pine Portage trail. The station is about 250 meters east-northeast of the mouth of a creek flowing into Pine Lake from the west. It is 1 meter above the water, on a ledge rising directly from the water's edge.

Station mark: A bronze disk set in the ledge.

Dud (Minnesota, Cook County; W. B. Fairfield, 1911).—On the east shore of Pine Lake, about 35 meters north of the Pine Portage trail.

Station mark: A bronze disk set in the rock.

**Dago** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the southwest shore of Pine Lake, 520 meters west by south of the west end of the Pine Portage trail, 300 meters north by west of the mouth of the stream immediately south of Pine Island, and 120 meters south of the mouth of a stream flowing in from the west. The station is 50 meters south of the point that lies south of the mouth of the creek. It is on a rock shelf about 8 meters above the water level.

Station mark: A bronze disk set in the solid rock.

Do (Minnesota, Cook County; W. B. Fairfield, 1911).—On the southeast shore of Pine Lake, on the point at the east side of the mouth of the stream immediately south of Pine Island. The station is about 3.5 meters back from and 3.5 meters above the water, on a granite stone whose top is about 0.3 meter above the ground. Station mark: A bronze disk set in the stone.

Station mark. A bronze disk set in the stone.

**Dare** (Minnesota, Cook County; W. B. Fairfield, 1911).—On Pine Island, 60 meters south of the Pine Portage trail, at a point 180 meters west of the east end of the trail. The station is on a granite ledge on the summit of the highest hill on the island.

Station mark: A drill hole within a triangle cut in the ledge 5 meters northeast of a pile of granite blocks.

Dead. (See description of reference monument 1104.)

Candy. (See description of reference monument 1111.)

Cave (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of Magnetic Lake, on the extreme tip of the rocky point between the north and east arms of the lake. The station is on a large rock, close to the water's edge and about 0.3 meter above the lake level.

Station mark: A bronze disk set in the rock.

Deal. (See description of reference monument 1108.)

**Damp** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west shore of Magnetic Lake, on the south side of a prominent point, and about 300 meters southwest of a conspicuous island. The station is about 150 meters southwest of the extreme end of the point facing the island and is on a large rock close to the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

**Coon** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the east shore of Magnetic Lake, 900 meters northeast of the entrance from Gunflint Lake. The station is on the point on the north side of the first bay to the northeast of the entrance to the lake. It is on a rock on the extreme tip of the point.

Station mark: A drill hole within a triangle cut in the rock.

**Cog** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of Magnetic Lake, on a small point of the shore directly opposite the point which is on the south side of the entrance to the long eastern arm of the lake. The station is 1,050 meters north and 400 meters east of the entrance to the lake from Gunflint Lake. It is on a large rock close to the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

Corn (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of the long eastern arm of Magnetic Lake, on the rocky point 900 meters west of the east end of the arm. The station is on a large rock close to the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

Dill (Minnesota, Cook County; W. B. Fairfield, 1911).—On the extreme southeast shore of Gunflint Lake, 230 meters south of the most southern building of the old Pigeon River lumber camp. The station is on the summit of a small but prominent bare knoll about 60 meters from the shore line and just south of a stream which drains a swamp and small lake to the east.

Station mark: A bronze disk set in a large white granite rock.

**Come** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On a small rocky island in Little Gunflint Lake, near the north shore, 500 meters from the portage from Little North Lake. The station is on the solid outcropping ledge on the south point of the island, 0.7 meter above high-water mark.

Station mark: A bronze disk set in the ledge.

**Demon** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of Little Gunflint Lake, 690 meters southwest by west of the portage from North Lake, and on the first prominent point west of the portage. The station is on a granite rock about 0.7 by 1 meter in cross section, about 2 meters from the shore line, and 0.3 meter below high-water mark.

Station mark: A bronze disk set in the rock.

Dooley. (See description of reference monument 1134.)

Canute. (See description of reference monument 1137.)

**Cod** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of Little Gunflint Lake, on the first point west of the small island that lies off the north shore, 500 meters west of the portage at the east end of the lake. The station is on the shore line, on a large rock about 0.7 meter above the lake level.

Station mark: A bronze disk set in the rock.

**Doll** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the north shore of North Lake, on the prominent point directly north of and opposite Height-of-Land Portage. There is a long peninsulalike point about 500 meters to the northeast. The station is on a large rock about 6 meters back from the shore line. A line from the station to Height-of-Land Portage passes a little east of the three small islands in the middle of the lake.

Station mark: A drill hole in the rock.

**Dole** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the north shore of the southwest arm of North Lake, opposite and northwest of Height-of-Land Portage. A line drawn from the station to the portage passes between the middle, and the most western, of the three small islands. The station is on a ledge 1 meter by 1.5 meters in size, 1 meter south of high-water mark, and 0.3 meter above the lake level.

Station mark: A drill hole in the rock.

Door (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of the southwest arm of North Lake, about 900 meters west of Height-of-Land Portage. The station is on a rock near the water's edge. Station mark: A drill hole in the rock.

**Dolo** (Minnesota, Cook County; W. B. Fairfield, 1911).—On an island in the southwest arm of North Lake, 1,200 meters west of Height-of-Land Portage. The station is on the southwest point of the largest and most western of the four islands in this arm of the lake. It is on a large, flat rock about 1.5 meters from the water's edge and 1 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Due** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the west shore of North Lake, about 700 meters south of the entrance to Little North Lake. The station is on the tip of the long peninsulalike point at the south side of the first bay south of the entrance. It is on a rock about 6 meters from the water line and 1.5 meters above the lake level.

Station mark: A drill hole in the rock.

**Crab** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the south shore of North Lake, about 1½ miles east of Height-of-Land Portage. The station is on a large granite bowlder about 1.5 meters from the shore line and 0.3 meter below high-water mark. Another and larger bowlder is on the shore about 4.5 meters east of the station.

Station mark: A drill hole within a triangle cut in the bowlder.

Cruz (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the south shore of North Lake, about seven-eighths mile west of the entrance to Sac Bay. The station is on a large fixed rock on the rounding shore line, about 1.5 meters from the water's edge and 0.3 meter below high-water mark.

Station mark: A drill hole in the rock.

Crit (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of North Lake, about 1½ miles east of the entrance to Little North Lake. The station is on the tip of the rocky point about 200 meters southeast of the east end of the abandoned railway trestle across a deep bay. It is about 4.5 meters from the water's edge and 2.5 meters above the lake level, on an outcropping granite ledge.

Station mark: A bronze disk set in the ledge.

Craw (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the south shore of North Lake, on the northern tip of the point at the west side of the entrance to Sac Bay. The station is on a large fixed rock about 4.5 meters back from the shore line and 2.5 meters above the lake level.

Station mark: A drill hole in the rock.

Crime (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of North Lake, about 2 miles east of the entrance to Little North Lake. The station is on a prominent, bare, rocky point, opposite and a little west of north of the entrance to Sac Bay. It is on a large rock about 6 meters back from the shore and 2.5 meters above the lake level. The abandoned railroad grade is about 10 meters north of the station. Station mark: A bronze disk set in the rock.

Crill (Ontario, Thunder Bay District; Fairfield, 1911).—On the north shore of North Lake, on a rocky point, opposite and a little east of north of the entrance to Sac Bay. The station is on the solid ledge on the shore line, about 0.6 meter below high-water mark.

Station mark: A drill hole in the ledge.

**Canoe** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of North Lake, about 1½ miles west of the east end of the lake. The station is on a little point of the shore 200 meters west of a prominent bay. It is on a large rock 3 meters from the shore line and 1.2 meters above high-water mark.

Station mark: A drill hole in the rock.

**Croak** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north side of North Lake, about 1 mile west of the east end of the lake. The station is on the neck that separates the first large bay from the east end of the lake. It is on a small knoll about 60 meters east of the east head of the bay. It is about 6 meters about the lake here of the lake. The old railroad grade is about 60 meters north of the station.

• Station mark: A drill hole in a smooth granite ledge.

Cred (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the south side of North Lake, near the east end. The station is on top of a cliff near the top of the ridge about 500 meters south of the lake shore and about south 30° east of the prominent island in this part of the lake.

Station mark: A drill hole in the solid granite rock.

**Carp** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north side of North Lake, about one-half mile west of the east end of the lake and 230 meters north from the lake shore. The station is on the highest part of a small rocky knoll just south of the railroad track and about 300 meters northeast of the Bishop sawmill.

Station mark: A drill hole in a large fixed rock.

Bishop Saw Mill Stack (Ontario, Thunder Bay District, W. B. Fairfield, 1911).—On the north shore of North Lake, about three-fourths mile west of the east end of the lake.

Station mark: The taller of the two iron stacks on the Bishop sawmill.

**Can** (Ontario, Thunder Bay District; W. B. Fairfield, 1911; 1917).—North of the east end of North Lake, 130 meters due north of "The Spring" on the shore of North Lake. The station is 20 meters north of the Canadian National Railway at a point about 460 meters west of the railway station at North Lake. It is on a ridge through which a cut has been made for the railway and is about 3 meters above the level of the track.

Station mark: A drill hole in a small stone.

North Lake Longitude Station (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—At the Canadian National Railways station North Lake, on the east end of North Lake. The station is about 21 meters west of the railway station and 12 meters south of the west end of the station platform. It is between the main line of the railroad and the southwest leg of the Y, 83 meters east of the frog of the Y switch.

Station mark: A drill hole in the top of a concrete pier 20 by 30 inches in cross section and 3.5 feet high.

**Dux** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the south shore of the narrows between North Lake and Little North Lake, 300 meters east of Little North Lake, and about 100 meters west of the west end of a small island. The station is on a large rock about 0.3 meter below the high-water mark and 1 meter from the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

Cute (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of the narrows between North Lake and Little North Lake, about 150 meters northwest of the west end of island No. 6. The station is about 1 meter from the water's edge, on a large fixed bowlder, about 0.3 meter below the high-water mark. Station mark: A drill hole within a triangle cut in the bowlder.

Doc. (See description of reference monument 1146.)

Dod. (See description of reference monument 1144.)

Cita. (See description of reference monument 1147.)

Doke. (See description of reference monument 1140.)

Clem (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of Little North Lake, directly north of the outlet of the narrows from North Lake. The station is 150 meters east of the mouth of a little draw, on a red stone 0.3 meter from the water's edge.

Station mark: A drill hole in the stone.

Cover. (See description of reference monument 1139.)

**Dram** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the south shore of North Lake, 3.5 meters west of the Height-of-Land Portage road. The station is on a large rock set flush with the ground 8 meters from the water's edge.

Station mark: A drill hole within a triangle cut in the rock. Boundary monument 4 bears south  $10^{\circ} 07'$  west, 5.4 meters distant from the station.

Dick. (See description of reference monument 1158.)

Dope (Minnesota, Cook County; W. B. Fairfield, 1911).—On the north shore of South Lake, on the first point west of Height-of-Land Portage. The station is on a large rock, 1.2 meters from the water's edge and 0.7 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Drill (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of South Lake, 1% miles east of the west end of the lake. The station is on the point opposite Height-of-Land Portage, on a large rock at the water's edge and 0.3 meter above the level of the lake.

Station mark: A bronze disk set in the rock. Reference monument 1158 is 250 meters to the east of the station.

**Crown** (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the north shore of South Lake, in the small bay from which Height-of-Land Portage leaves the lake. The station is about 70 meters east of the end of the portage trail, about 9 meters from the water's edge, and on top of a rock cliff about 10 meters high. It is near the edge of the cliff and just south of two small pine trees. It was used as a bench mark for the level line.

Station mark: A bronze disk set in the rock.

Drip (Minnesota, Cook County; W. B. Fairfield, 1911).—On the north shore of South Lake, about one-half mile from, and on the second rocky point west of Height-of-Land Portage. The station is on a large rock 3 meters from the shore line.

Station mark: A drill hole within a triangle cut in the rock.

**Duff** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of South Lake, about 1,400 meters east of the west end of the lake. The shore here is covered with large irregularly shaped bowlders. The station is on a large rock 1.5 meters from the water's edge and 0.3 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

**Dont** (Minnesota, Cook County; W. B. Fairfield, 1911).—On the south shore of South Lake, about 500 meters from the west end of the lake. The station is on a very large rock, the largest along the shore here, and is 1.5 meters from the water's edge.

Station mark: A drill hole within a triangle cut in the rock.

Chit (Ontario, Thunder Bay District; W. B. Fairfield, 1911).—On the east end of South Lake. The station is on the north shore of the first small bay north of the boundary stream from Rat Lake. It is on a rock at the water's edge, one-fourth mile northwest of the west end of South Lake Portage.

Station mark: A drill hole within a triangle cut in the rock.

**Dall** (Minnesota, Cook County; W. B. Fairfield, 1911).—At the east end of South Lake, on the rocky reef that connects the two islands that lie 200 meters west of the portage to Rat Lake. The station is on a large rock at the most western point of the reef and is probably submerged at high water.

Station mark: A bronze disk set in the rock.

Carl (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1917).—On the north shore of that portion of Rose Lake known as Mud Lake, and three-eighths mile east of the west end of the lake. The station is on a small island just off the point where the lake bends to the north for the last time. It is on a large rock about 1 meter above the lake level.

Station mark: A drill hole in the rock. Reference monument 1181 on the lake shore bears north  $30^{\circ}$  14' east, 43.6 meters distant from the station.

Duke (Minnesota, Cook County; W. B. Fairfield, 1911).—At the west end of Rose Lake, between the portage and the short rapids from Rat Lake. The station is on a rock 1 meter above the lake level and 0.3 meter from the water line.

Station mark: A bronze disk set in the rock. Reference monuments 1172 and 1173 are, respectively, 5.2 and 16.5 meters distant from the station. Rose Lake bench mark, a bronze disk stamped "1526," is 0.2 meter north of the station.

Colt. (See description of reference monument 1179.)

Drop. (See description of reference monument 1176.)

Dan. (See description of reference monument 1178.)

Clip (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north shore of that portion of Rose Lake known as Mud Lake, one-half mile from the west end of the lake and 300 meters east of the point where the lake makes the last turn to the north. The station is 1 meter from the water's edge and 0.3 meter above the lake level, on a rock.

Station mark: A drill hole in the rock.

Dump. (See description of reference monument 1180.)

Dark. (See description of reference monument 1174.)

**Duck** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Rose Lake, on the first prominent point five-eighths mile west of the narrows of the Mud Lake portion of the lake. The station is on a rock 1 meter from the water's edge and 0.3 meter above the level of the lake.

Station mark: A drill hole in the rock. Reference monument 1182 bears south  $35^{\circ}$  49' east, 26.6 meters distant from the station.

**Club** (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north shore of Rose Lake, on the first prominent point west of the narrows of the Mud Lake portion of the lake. This point is about one-half mile west of the narrows. The station is on a rock 0.7 meter from the water's edge and but a few centimeters above the level of the lake.

Station mark: A drill hole in the rock.

**Deer** (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Rose Lake, on the bay just west of the narrows in the narrow part of the lake known as Mud Lake. The station is on the shore just after it turns from the south to an east-and-west shore and is on a rock 1 meter from the water's edge and 0.7 meter above the level of the lake.

Station mark: A drill hole in the rock. Reference monument 1184 bears south,  $27^{\circ} 29'$  east, 9.1 meters distant from the station.

Cat. (See description of reference monument 1187.)

Cabin (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north shore of Rose Lake, at the narrowest part of the narrow part of the lake known as Mud Lake. The station is on the rock cliff or knob 9 meters back of the log cabin used for an office by the Bishop Lumber Co.'s camp. It is on top of the rock, which is about 3 meters high.

Station mark: A bronze disk set in the rock.

April (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north shore of Mud Lake (the narrow portion of Rose Lake). The station is three-fourths mile west of the wide part of the lake, on the second point inside the narrow part. It is on a large, flat, solid rock, right at the water's edge and but a few centimeters above the level of the lake.

Station mark: A drill hole within a triangle cut in the rock.

Brand (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Rose Lake, about 250 meters west of the first prominent point inside the narrow part of the lake known as Mud Lake. The station is on a solid flat rock, about 1.5 meters from the water's edge and about 0.5 meter above the level of the lake. Station mark: A bronze disk set in the rock. Reference monument 1190 bears south 79° 51′ west, 20.7

meters distant from the station.

Altoona. (See description of reference monument 1199.)

Bird. (See description of reference monument 1192.)

Book. (See description of reference monument 1194.)

Block (Minnesota, Cook County; W. B. Fairfield, 1910).—On the south shore of Rose Lake, 1% miles west of the east end of the lake and south-southwest of the outlet into Arrow Lake. The station is on a rocky point, about 4.5 meters from the water's edge, on a large rock. A large pine tree with a blaze on it stands 3 meters back of the station, and a large cedar tree leans out over the water just east of the station.

Station mark: A drill hole within a triangle cut in the rock.

Bag. (See description of reference monument 1198.)

Bowie. (See description of reference monument 1200.)

Bone (Minnesota, Cook County; W. B. Fairfield, 1910).—On the south side of Long Portage between Rose and Watap Lakes, 900 meters from Rose Lake and 300 meters south of the portage trail. The station is on a high wooded spur of the ridge and is close to the edge of a rock cliff.

Station mark: A drill hole within a triangle cut in the rock.

Aloe. (See description of reference monument 1213.)

Betwixt. (See description of reference monument 1216.)

## APPENDIX V

Bandy (Minnesota, Cook County; W. B. Fairfield, 1910).-On the south shore of Watap or Rove Lake, about 1% miles west of the east end of the lake and about 200 meters south of the narrows. The station is about 1 meter from the water's edge and about 0.3 meter above the lake level, on a large rock.

Station mark: A drill hole within a triangle cut in the rock. Reference monument 1214 bears north 49° 13' east, 20.95 meters distant.

Alva (Ontario, Thunder Bay District; W. B. Fairfield, 1910) .- On the north shore of Mountain Lake. near the west end of the lake, on the point where the shore line turns northwest toward the portage, and about one-fourth mile west of a small wooded island. The station is on a large rock at the water's edge and about 0.3 meter above the lake leve!

Station mark: A drill hole within a triangle cut in the rock.

Bloom (Minnesota, Cook County; W. B. Fairfield, 1910).-On the west end of Mountain Lake, on a rounded point south of the portage. The station is on a rock, a little more than a meter from the water's edge and about 0.7 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Apple (Ontario, Thunder Bay District; W. B. Fairfield, 1910).-On the north shore of Mountain Lake, about three-fourths mile east of the west end of the lake. The station is about 20 meters east of the first rocky point east of the small wooded island that lies near the Canadian shore one-half mile east of the west end of the lake. It is on a large rock, about 1 meter from the water's edge and about 0.3 meter above the lake level.

Station mark: A drill hole within a triangle cut in the rock.

Andrew (Ontario, Thunder Bay District; W. B. Fairfield, 1910) .- On a small bare rocky island in Mountain Lake, about 100 meters offshore from the point on the west side of the entrance to the large bay on the Canadian shore and about 2 miles east of the west end of the lake. The station is on the highest part of the solid ledge about 0.5 meter above the lake level.

Station mark: A drill hole within a triangle cut in the ledge.

Astrid (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north shore of Mountain Lake, about 2 miles from its eastern end, on the first rocky point west of the small island on which monument 1255 is located and at the narrowest place in the lake. The rocky point extends about 15 meters out into the lake, and about 100 meters farther west there is a similar point, beyond which the lake widens again. The station is on a large rock, about 2 meters back from the water's edge and about 0.3 meter above the lake level.

Station mark: A bronze disk set in the rock.

Bard (Minnesota, Cook County; W. B. Fairfield, 1910).—On the south side of Mountain Lake, 11/4 miles distant, on the first prominent rounding timbered point west of Lesser Cherry Portage. The station is on a large rock on the western part of the point, about 2.5 meters back from the water's edge.

Station mark: A drill hole within a triangle.

Banker (Minnesota, Cook County; W. B. Fairfield, 1910).-At the east end of Mountain Lake, on the timbered bluff just above and south of the outlet. The station is about 23 meters back from the edge of the bluff, on a smooth, bare, rocky knoll. The rock runs up higher back of the station. Station mark: A drill hole within a triangle cut in the solid ledge.

Alert (Ontario, Thunder Bay District; W. B. Fairfield, 1910).-On the north side of Mountain Lake, near the east end, and about 800 meters back from the lake. The station is on the point of the first high, timbered ridge, somewhat below the summit of the ridge.

Station mark: A bronze disk set in a large smooth flat ledge.

Blin (Minnesota, Cook County; W. B. Fairfield, 1910) .- On the south side of Vaseux Lake, about midway between the ends of the lake. The station is back on the high wooded bluff on a projecting spur. Station mark: A drill hole within a triangle cut in the rock.

Alpen (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921) .- On the north side of Fan Lake, close to its east end. The station is on a large rock, about 0.3 meter above the lake level.

Station mark: A bronze disk set in the rock. Reference monument 1265 bears north 17° 35' east, 26.08 meters distant.

Billie (Minnesota, Cook County; W. B. Fairfield, 1910; 1918) .- On the south side of Moose Lake, on the first high, round peak west of the portage from North Fowl Lake and about 1,000 meters from the portage. The summit of the hill was cleared of timber to the north. The station is on a solid rock on the highest part of the hill.

Station mark: A bronze disk set in the rock.

Acme (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1918) .- North of the east end of Moose Lake, on the high, timbered ridge about 1,000 meters from the lake. The station bears north 25° east from the first bay

from Moose Portage on the north shore of the lake and is on a smooth rock ledge on the southern brow of the ridge, about 8 meters below the summit.

Station mark: A bronze disk set in the solid rock ledge.

Aunt. (See description of reference monument 1279.)

Black. (See description of reference monument 1262.)

Bear. (See description of reference monument 1260.)

**Blue** (Minnesota, Cook County; W. B. Fairfield, 1910; 1921).—On the south shore of Moose Lake, three-fourths mile from the west end of the lake, on the prominent rocky point opposite a deep bay on the north side of the lake. The station is on a large rock about 8 meters back from the shore line and about a meter above the lake level.

Station mark: A bronze disk set in the rock.

Bill (Minnesota, Cook County; W. B. Fairfield, 1910; 1917).—On the south shore of Moose Lake, at the head of the lake, in the bight of a small cove about 50 meters below a small point. The station is on a large rock, about 3 meters from the water's edge and less than a meter above the lake level before the dam was built across the outlet of Moose Lake.

Station mark: A bronze disk set in the rock. Reference monument 1258 bears south  $56^{\circ}$  44' west, 15.15 meters distant.

Ate (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921).—On the shore at the west end of Moose Lake. The station is on a large flat rock, about 8 meters back from the water's edge, 2 meters south of the Great Cherry Portage trail and about 40 meters north of the mouth of the main stream that flows from Vaseux Lake. A very large irregularly shaped bowlder, the largest anywhere along the shore line, lies about a meter lakeward from the station.

Station mark: A bronze disk set in the rock. Reference monument 1273 bears south  $75^{\circ} 04'$  west, 24.27 meters distant.

Big. (See description of reference monument 1264.)

Birch (Minnesota, Cook County; W. B. Fairfield, 1910).—Near the head of North Fowl Lake, just back of the east end of Moose Portage. The station is on a rock cliff about 350 meters from the lake and about half-way up the slope of the heavily wooded ridge.

Station mark: A bronze disk set in the solid ledge.

Atlas (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north side of North Fowl Lake, about 700 meters from the east end of Moose Portage. The station is on a cleared place on the southern slope of a hill, about 40 meters above the lake level.

Station mark: A bronze disk set in a rock projecting about 0.3 meter above the ground.

Ascot (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the north side of North Fowl Lake, about midway between the east and west ends of the lake and about 500 meters back from Camp 6 of the Pigeon River Lumber Co. The station is on a solid rock on the highest part of a small cleared knoll.

Station mark: A bronze disk set in the rock.

Bail (Minnesota, Cook County; W. B. Fairfield, 1910).—On the United States shore of North Fowl Lake. The station is about midway between the head and foot of the lake, on the highest of the high rock cliffs and just back from a small wooded island. It is on the highest part of the cliff, about 2 meters back from the edge. Station mark: A bronze disk set in the solid ledge.

Adam (Ontario, Thunder Bay District; W. B. Fairfield, 1910).—On the east side of the north arm of North Fowl Lake. The station is on the first high cliff that rises from the water on the Canadian shore after passing the narrows. It is about 4 meters back from the edge of the cliff on rising ground that is heavily wooded to the top of the hill above the station.

Station mark: A drill hole within a triangle cut in the solid rock.

Bab. (See description of reference monument 1272.)

Ball. (See description of reference monument 1280.)

Abel. (See description of reference monument 1305.)

Pigeon River Traverse Station 280. (See description of reference monument 1282.)

Bull. (See description of reference monument 1270.)

Alder (Ontario, Thunder Bay District; W. B. Fairfield, 1910; 1921).—On the east side of South Fowl Lake, at the foot of the high, rocky, wooded, bluff point 1,000 meters east of the island which is near the outlet of the lake. The station is on the rounded point, about 4.5 meters back from the water's edge, on a large rock.

Station mark: A bronze disk set in the rock. Reference monument 1303 bears north  $69^\circ$  23' east, 33.58 meters from the station.

Pigeon River Traverse Station 315 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—At the head of Pigeon River where it leaves South Fowl Lake. The station is on the hillside, about 55 meters northeast from the east end of the South Fowl Dam and about 25 meters from the lake shore.

Station mark: A drill hole at the center of a cross cut in a rock set for the purpose of marking the station.

Pigeon River Traverse Station 278 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the west shore of South Fowl Lake, about 230 meters from the South Fowl Lake Dam across the head of Pigeon River. The station is at the foot of the high rock cliff, on a very large fixed rock, and about 2 meters from the shore line at high water.

Station mark: A bronze disk, stamped "278," set in the rock.

## PIGEON RIVER, MINOR SCHEMES

Pigeon River Traverse Station 276 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the west bank of Pigeon River, about 90 meters below the South Fowl Lake Dam. The station is on top of the high cliff point, about 1 meter back from the edge of the cliff.

Station mark: A bronze disk, stamped "276," set in the rock.

Pigeon River Traverse Station 313 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the east side of Pigeon River where it leaves South Fowl Lake. The station is on the ledge or cliff at the east end of the South Fowl Lake Dam and about 6 meters above the top of the dam.

Station mark: A bronze disk, stamped "313," set in the rock.

Pigeon River Traverse Station 311 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the east bank of Pigeon River, about 150 meters below the South Fowl Lake Dam.

Station mark: A drill hole at the center of a cross cut in a rock.

Pigeon River Traverse Station 274 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the west bank of Pigeon River, about 75 meters below the South Fowl Lake Dam.

Station mark: A drill hole at the center of a cross cut in a rock.

Pigeon River Traverse Station 272 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the west bank of Pigeon River, about 300 meters below South Fowl Lake Dam. The station is on a rock on the bank 10 meters above the lower end of the rapids.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 309 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the east bank of Pigeon River, about 500 meters below South Fowl Lake Dam. The station is on a rock about 2.5 meters from the shore line and just below an old pier at the head of a rapids.

Station mark: A bronze disk, stamped "309," set in the rock.

Pigeon River Traverse Station 270 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the west bank of Pigeon River, about 650 meters below South Fowl Lake Dam. The station is on the high bank, about 30 meters above the first dam below the lake and about 1.5 meters from the edge of the bank. Station mark: A bronze disk, stamped "270," set in a fixed rock.

Pigeon River Traverse Station 307 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the east bank of Pigeon River, about 750 meters below South Fowl Lake Dam.

Station mark: A drill hole at the center of a cross cut in a large fixed rock.

Pigeon River Traverse Station 268 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the west bank of Pigeon River, about 1,000 meters below South Fowl Lake. The station is on a large rock on the bank at a narrow rapid place in the river where the hills close in on both sides of the stream. Station mark: A bronze disk, stamped "268," set in the rock.

Pigeon River Traverse Station 305. (See description of reference monument 1288.)

Pigeon River Traverse Station 303 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1,400 meters below South Fowl Lake. The station is on a ledge on the bank about 100 meters east of the bend where the river first turns to an easterly course. Station mark: A bronze disk, stamped "303," set in the ledge.

Pigeon River Traverse Station 250 (Minnesota, Cook County; W. B. Fairfield, 1909).-On the south shore of Pigeon River, about 100 meters above the mouth of Stump River. The station is on a rock on the gravel bar, about 4 meters from the river bank.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 291. (See description of reference monument 1292.)

Pigeon River Traverse Station 271 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918) .- On the north bank of Pigeon River, about 3,100 meters above the mouth of Swamp River. The station is on a rock on the low, muddy, timbered bank of the river.

Station mark: A bronze disk, stamped "271," set in the rock.

Pigeon River Traverse Station 224 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).-On the south bank of Pigeon River, about 2,200 meters above the mouth of Swamp River. The station is on a large rock on the shore line near the middle of a long east-and-west straight reach of the river.

Station mark: A bronze disk, stamped "224," set in the rock.

Pigeon River Traverse Station 267 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918) .- On the north bank of Pigeon River, about 2,000 meters above the mouth of Swamp River. The station is on the highest point of the high bluff bank at the bend of the river. The river trail crosses the point beside the station. Station mark: A bronze disk, stamped "267," set in a large rock.

Pigeon River Traverse Station 222 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south shore of Pigeon River, about 1,800 meters above the mouth of Swamp River.

Station mark: A bronze disk, stamped "222," set in a large rock.

Pigeon River Traverse Station 220 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).-On the south bank of Pigeon River, about 1,400 meters above the mouth of Swamp River. The station is on a large rock. Station mark: A bronze disk, stamped "220," set in the rock.

Pigeon River Traverse Station 261. (See description of reference monument 1308.)

Pigeon River Traverse Station 216 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south bank of Pigeon River, about 500 meters above the mouth of Swamp River. The station is on a large rock on the shore line at the head of the rapids and just upstream from a steep bluff bank.

Station mark: A bronze disk, stamped "216," set in the rock.

Pigeon River Traverse Station 257 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918) .- On the north bank of Pigeon River, about 300 meters above the mouth of Swamp River. The station is on a large rock on the shore line at the foot of a steep bluff bank.

Station mark: A bronze disk, stamped "257," set in the rock.

Pigeon River Traverse Station 208 (Minnesota, Cook County; W. B. Fairfield, 1909).-On the south bank of Pigeon River, about 850 meters below the mouth of Swamp River.

Station mark: A drill hole at the center of a cross cut in a fixed rock.

Pigeon River Traverse Station 243 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).-On the north bank of Pigeon River, about 1,200 meters below the mouth of Swamp River. Station mark: A bronze disk, stamped "243," set in a large fixed rock.

Pigeon River Traverse Station 188 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south bank of Pigeon River, about 1,700 meters above Partridge Falls. The station is about 150 meters downstream from an abrupt bend of the river that has a small island in it. It is on a large rock on the bank, near the shore line

Station mark: A bronze disk, stamped "188," set in the rock.

Pigeon River Traverse Station 227 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918) .- On the north bank of Pigeon River about 1,600 meters above Partridge Falls. The station is on a large rock near the shore line about 300 meters below the mouth of a small stream.

Station mark: A bronze disk, stamped "227," set in the rock.

Pigeon River Traverse Station 221. (See description of reference monument 1318.)

Pigeon River Traverse Station 178 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south side of Pigeon River, about 200 meters below Partridge Falls. The station is on a large, fixed rock about 2 meters back from the shore line.

Station mark: A bronze disk, stamped "178," set in the rock.

**Pigeon River Traverse Station 217** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 500 meters below Partridge Falls. The station is on a small rock, about 2 meters from the shore line just below the foot of some rapids.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 213** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1,100 meters below Partridge Falls. The station is on a rock on the muddy bank just below the mouth of a small creek.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 211** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1,300 meters below Partridge Falls. The station is on a rock on the muddy bank, about 200 meters below the mouth of a creek.

Station mark: A bronze disk, stamped "211," set in the rock.

**Pigeon River Traverse Station 170** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about five-eighths mile above the dam at the head of The Cascades. The station is on a large rock on the flat mud bank, about 3 meters from the shore line at the head of some rapids.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 207** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 900 meters above the dam at the head of The Cascades. The station is on a large rock on the low-water shore line at the mouth of a little stream. When the dam is closed the rock is covered with water.

Station mark: A bronze disk, stamped "207," set in the rock.

**Pigeon River Traverse Station 168** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south shore of Pigeon River, about 800 meters upstream from the head of The Cascades. The station is on a large rock on the bank at the foot of some rapids when the river is at normal stage. When the Cascades Dam is closed, the station is flooded.

Station mark: A drill hole at the center of a cross cut in the rock.

**Cascade** (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River, about one-fourth mile east of the Cascades Dam. The station is on the summit of a high hill which has been logged and cut over, leaving many exposed rock outcrops. There is a higher timbered hill about one-fourth mile to the southeast.

Station mark: A drill hole within a triangle cut in a large rock about 3 meters below and 8 meters southwest of the highest point of the hill.

Pigeon River Traverse Station 201 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River, about 200 meters southwest of the dam at The Cascades. The station is on the point of the ridge on the north side of the road leading up the hill from the river. It is on the highest part of the ledge. Station mark: A bronze disk, stamped "201," set in the ledge.

**Pigeon River Traverse Station 164** (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south side of Pigeon River, about 170 meters upstream from the dam at the head of The Cascades. The station is on the sloping bank about 30 meters from the river.

Station mark: An iron rod 1 inch in diameter and 24 inches long driven in the ground to a depth of 20 inches.

**Pigeon River Traverse Station 166** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, about 520 meters southeast of the dam at the head of The Cascades. The station is on the summit of a hill at the southeast edge of the clearing and about 50 meters northeast of the Grand Portage trail or road.

Station mark: A bronze disk, stamped "166," set in a large rock.

Pigeon River Traverse Station 199. (See description of reference monument 1324.)

**Pigeon River Traverse Station 197** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River at the head of The Cascades. The station is on the cliff on the sharp bend of the river just below the first falls and just opposite the end of the lumber chute.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 162** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 150 meters below the dam at the head of The Cascades. The station is on a large rock on top of the high cliff at the upper end of the third fall of The Cascades. It is about 2 meters back from the edge of the cliff.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 195** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 240 meters below the dam at the head of The Cascades. The station is on top of the cliff about a meter back from the edge.

Station mark: A bronze disk, stamped "195," set in the rock.

Pigeon River Traverse Station 193 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 400 meters below The Cascades. The station is on top of the cliff, near the north end, and about 2 meters back from the edge.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 158 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 500 meters below the dam at the head of The Cascades. The station is on a large rock on top of the cliff about 3.5 meters back from the edge. Station mark: A bronze disk stamped (1158 " set in the reck

Station mark: A bronze disk, stamped "158," set in the rock.

**Pigeon River Traverse Station 156** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 700 meters below the dam at the head of The Cascades. The station is on a large rock on top of the cliff about 2 meters back from the edge.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 154 (Minnesota, Cook County; W. B. Fairfield; 1909; 1918).—On the south bank of Pigeon River, about five-eighths mile below The Cascades. The station is on top of the cliff about 4 meters back from the edge.

Station mark: A bronze disk, stamped "154," set in the rock.

Pigeon River Traverse Station 152 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about seven-eighths mile below The Caseades. The station is at the lower end of a long canyon or gorge. It is about 200 meters upstream from where the river turns abruptly to the south and is on the rim of the gorge about 3 meters from the edge of the cliff.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 185 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1 mile below The Cascades. The station is about 120 meters upstream from where the river leaves the long canyon and makes an abrupt turn to the south. Station mark: A drill hole at the center of a creek such as the south.

Station mark: A drill hole at the center of a cross cut in a large rock.

**Pigeon River Traverse Station 181** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1 mile below The Cascades. The station is about 120 meters downstream from where the river leaves the long canyon and turns abruptly to the south. It is on a large rock on the bank opposite a wing dam.

Station mark: A bronze disk, stamped "181," set in the rock.

Pigeon River Traverse Station 179 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north bank of Pigeon River, about 1¼ miles below The Cascades. The station is on a rock 2 meters from the shore line. Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 144 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 1% miles below The Cascades.

Station mark: A drill hole at the center of a cross cut in a large rock.

Pigeon River Traverse Station 177 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1½ miles below The Cascades. The station is on a large rock on the sloping bank about 1 meter from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 140** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 1% miles below The Cascades. The station is on a large rock near the mouth of a small brook.

Station mark: A bronze disk, stamped "140," set in the rock.

Pigeon River Traverse Station 171 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 4 miles above the mouth of Arrow River and about 2 miles below The Cascades. Station mark: A bronze disk, stamped "171," set in a rock near the mouth of a small stream.

Pigeon River Traverse Station 138 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, about 2¼ miles below The Cascades. The station is on a rock on a shoal in the river bed about 8 meters from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

96030-31-----38

Pigeon River Traverse Station 169½ (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north shore of Pigeon River, about 3¾ miles above the mouth of Arrow River. The station is on a dry shoal in the river bed about 8 meters offshore.

Station mark: A drill hole at the center of a cross cut in a rock.

Pigeon River Traverse Station 132 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 3% miles above the mouth of Arrow River. The station is on a rock about a meter back from the shore line.

Station mark: A bronze disk, stamped "132," set in the rock.

**Pigeon River Traverse Station 128** (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south side of Pigeon River, about 2% miles above the mouth of Arrow River. The station is on a large rock in the river about 2 meters from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 126** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 2<sup>3</sup>/<sub>4</sub> miles above the mouth of Arrow River. The station is on a rock about 1.2 meters from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 161 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north shore of Pigeon River, about 2% miles above the mouth of Arrow River. The station is on a rock on a dry shoal close to the shore.

Station mark: A bronze disk, stamped "161," set in the rock.

Pigeon River Traverse Station 155 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 2 miles above the mouth of Arrow River. The station is on a small rock about 1.5 meters off shore.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 153** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1% miles above the mouth of Arrow River. The station is on a large rock about 3 meters offshore opposite a large mud slide.

Station mark: A bronze disk, stamped "153," set in the rock. A bench mark, a bronze disk stamped "967," is set in the rock 0.3 meter west of the station.

**Pigeon River Traverse Station 118** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, about 1½ miles above the mouth of Arrow River. The station is in the river bed, on a large rock which is connected to the south shore by a wing dam.

Station mark: A bronze disk, stamped "118," set in the rock.

**Pigeon River Traverse Station 145** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1% miles above the mouth of Arrow River. The station is on a rocky point just above a wide place in the river. It is on a rock close to the shore line at the swift rapids. Station mark: A bronze disk, stamped "145," set in the rock.

Pigeon River Traverse Station 143 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1 mile upstream from the mouth of Arrow River and at the mouth of a small brook.

Station mark: A bronze disk, stamped "143," set in a large rock.

Pigeon River Traverse Station 106 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 400 meters upstream from the mouth of Arrow River.

Station mark: A bronze disk, stamped "106," set in a large rock.

**Pigeon River Traverse Station 131** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River, just above The Oxbow and about 450 meters downstream from the mouth of Arrow River. Two small streams enter the river about 70 meters apart at this place. The station is on a large rock on a shoal just off the mouth of the southern of the two streams.

Station mark: A bronze disk, stamped "131," set in the rock.

**Pigeon River Traverse Station 100** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the United States (west) shore of Pigeon River at the most northwestern bend of The Oxbow. The station is on a rock on the bluff bank about 3 meters above the river.

Station mark: A bronze disk, stamped "100," set in the rock.

**Pigeon River Traverse Station 125** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the Canadian (east) bank of Pigeon River and on the most western point of land inside the The Oxbow. The station is on a rock close to the shore line.

Station mark: A bronze disk, stamped "125," set in the rock.

Pigeon River Traverse Station 123 (Ontario, Thunder Bay District; W. B. Fairfield, 1909) .- On the north bank of Pigeon River in the most southern bend of The Oxbow. The station is on a projecting rocky point that becomes an island at flood stage of the river. It is on a rock about 2.5 meters from the bank. Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 115 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).-On the north bank of Pigeon River, about 250 meters upstream from The Tunnel. The station is on a large rock about 4.5 meters above the water.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 94 (Minnesota, Cook County; W. B. Fairfield, 1909) .- On the south bank of Pigeon River, about three-fourths mile above the Scott Highway Bridge and about 170 meters upstream from the head of The Tunnel. The station is on a large rock in the river bed about 4.5 meters out in the stream from the bluff bank.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 92 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south side of Pigeon River, about five-eighths mile above the Scott Highway Bridge. The station is on the rim of the cliff at The Tunnel, about 40 meters downstream from the upstream limits of the cliff and about 20 meters above the river bed.

Station mark: A bronze disk, stamped "92," set in the rock.

Pigeon River Traverse Station 111 (Ontario, Thunder Bay District; W. B. Fairfield, 1909) .-- On the north bank of Pigeon River, about 100 meters downstream from The Tunnel. The station is on a rock, set for the purpose of marking the station, on the steep hillside above the cliffs that rise from the water. It is about 4.5 meters back from the edge of the cliff.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 109 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).-On the north bank in a sharp bend of Pigeon River, about 600 meters above the Scott Highway Bridge and about 450 meters below The Tunnel. The station is on top of a low cliff about 6 meters above the river. Station mark: A bronze disk, stamped "109," set in the rock.

Pigeon River Traverse Station 86 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south shore of the bend of Pigeon River, about 580 meters upstream from the Scott Highway Bridge. The station is on a level ledge of trap rock, about 2 meters wide, which extends along the shore line about 0.6 meter above the water. A meander corner post of the United States General Land Office stands on the bank 1.8 meters back of the station. The post is marked on the north side, "M. C. T. 64 N."; on the west, "S. 19"; on the east, "R. 6 E. S. 20."

Station mark: A bronze disk, stamped "86," set in the ledge.

Pigeon River Traverse Station 107 (Ontario, Thunder Bay District; W. B. Fairfield, 1909) .- On the north shore of Pigeon River, about 500 meters above the Scott Highway Bridge and about 100 meters upstream from the cliffs that are along the north bank of the river. The station is on a rock, set for the purpose of marking the station, on a steep hillside near the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 84 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south shore of Pigeon River, about 300 meters upstream from the Scott Highway Bridge. The station is on a large rock near the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 101 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918) .- On the north side of Pigeon River, about 100 meters below the Scott Highway Bridge. The station is on top of the cliff directly above the water, about 1.5 meters back from the edge of the cliff and about 12 meters above the water. Station mark: A bronze disk, stamped "101," set in the rock. A bench mark, a bronze disk stamped

"935," is set in the rock about 15 meters north of the station.

Pigeon River Traverse Station 80 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south shore of Pigeon River, about 220 meters below the Scott Highway Bridge. The station is on a ledge at the foot of the cliff and close to the water's edge.

Station mark: A drill hole at the center of a cross cut in the ledge.

Pigeon River Traverse Station 78 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the South bank of Pigeon River, about 600 meters below the Scott Highway Bridge. The station is on a large rock on the bank about 120 meters below the mouth of a small stream.

Station mark: A bronze disk, stamped "78," set in the rock.

**Pigeon River Traverse Station 76** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south shore of Pigeon River, about 800 meters below the Scott Highway Bridge. The station is on a large buried bowl-der on the bank about 1.2 meters from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 95** (Ontario, Rainy River District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 900 meters below the Scott Highway Bridge. The station is on a large rock about 1.5 meters back from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 74** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 2½ miles above Horn Rapids. The station is near the middle of the long straight steep shore, on a rock about 3.5 meters in diameter, out in the river bed about 3 meters from the shore line and about 1.5 meters above the water.

Station mark: A bronze disk, stamped "74," set in the rock.

Pigeon River Traverse Station 93 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River, about three-fourths mile below the Scott Highway Bridge. The station is on a large rock on the grassy river bank about 150 meters below the mouth of a small stream.

Station mark: A bronze disk, stamped "93," set in the rock.

**Pigeon River Traverse Station 72** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 2¼ miles above Horn Rapids. The station is on a large buried bowlder on the river bank at a point where one can look across the river and straight down the narrow channel that passes around the north side of the upper one of two large, low islands.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 89** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River at the head of some very swift rapids, about 2 miles above Horn Rapids. The station is just upstream from the sharp bend of the bank where the main channel of the river bends sharply around the northside of a large, low, flat island. At this point the river changes its course sharply from an easterly to a southerly direction for a short distance, thence it flows east again.

Station mark: A bronze disk, stamped "89," set in a large rock close to the water's edge.

Pigeon River Traverse Station 70 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south side of Pigeon River, about 2 miles upstream from Horn Rapids. The station is on the south shore of a large, low, flat island, around the north side of which the main channel of the river makes a sharp bend. It is about 65 meters downstream from the head of the island. The station is on a small buried bowlder just below the highwater mark. The channel between it and the mainland is only about 8 meters wide.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 68 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 1% miles above Horn Rapids. The station is just opposite the downstream point of a large, low, flat island, around the north side of which the main channel of the river makes a sharp bend. Station mark: A bronze disk, stamped "68," set in a large rock.

**Pigeon River Traverse Station 85** (Ontario, Thunder Bay District; W. B. Fairfield, 1909.—On the north bank of Pigeon River, about 1½ miles upstream from Horn Rapids. The station is at the foot of the steep point of the hill, on a large rock about 1.5 meters from the water's edge. There are some islands in the river just above the station.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 64 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south bank of Pigeon River, about 1% miles upstream from Horn Rapids. The station is on a large rock on the river bank.
 Station mark: A bronze disk, stamped "64," set in the rock.

**Pigeon River Traverse Station 83** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 1¼ miles above Horn Rapids. The station is on a large rock on a big bend of the river and is about 2 meters from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 81** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1,800 meters above Horn Rapids. The station is on a large rock about 2 meters from the water's edge.

Station mark: A bronze disk, stamped "81," set in the rock.

Pigeon River Traverse Station 62 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south bank of Pigeon River, about 1,500 meters upstream from Horn Rapids. The station is on a rock about 35 meters downstream from the mouth of a small creek and about 1 meter from the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 79 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 1,300 meters above Horn Rapids. The station is on a large rock about 3 meters from the water's edge.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 60 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south bank of Pigeon River, about 1,200 meters upstream from Horn Rapids. The station is opposite a very large, level, marshy area lying in the bend on the north side of the river.

Station mark: A drill hole at the center of a cross cut in a large rock.

Blink (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River 1½ miles west of Horn Rapids. The station is about 300 meters south of the river, on the crest of the high ridge that parallels the river and about 30 meters northeast of the highest point on the ridge. The ridge is timbered, and vistas had to be cut to see other stations.

Station mark: A bronze disk set in rock.

Horn (Minnesota, Cook County; Jesse Hill, 1918).—On the south side of Pigeon River, about 450 meters southwest of Horn Rapids. The station is on the highest point of a high and prominent hill. Station mark: A bronze disk set in the solid rock of the bare summit.

**Poplar** (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north side of Pigeon River 300 meters northeast of Horn Rapids. The station is on the south end of the high hill around which the Scott Highway descends to the river about 2 miles below the highway bridge.

Station mark: A bronze disk set in a large rock.

Pigeon River Traverse Station 751/2 (Ontario, Thunder Bay District; Jesse Hill, 1918).—On the north shore of Pigeon River about 700 meters upstream from Horn Rapids and near the middle of the east-and-west reach of the river. The station is on a rock about 3 meters above the water.

Station mark: A cross cut in the rock.

Sight (Ontario, Thunder Bay District; W. B. Fairfield, 1908; 1918).—On the north side of Pigeon River, about three-fourths mile northeast of High Falls and about 250 meters northeast of the fork of the road leading to High Falls. The station is on the top of a prominent ridge that terminates at its southern end in a rocky bluff and steep cliffs.

Station mark: A drill hole within a triangle cut in the rock.

**Boulder** (Minnesota, Cook County; W. B. Fairfield, 1908).—On the third rocky point east of the mouth of Pigeon River and on the peninsula that terminates in Pigeon Point. The station is on the top of a very large rock about 6 meters above the shore of Lake Superior. On the face of the rock toward the lake is cut in large letters "Str. Picket." Back of the station the ground rises to the cliffs and is thickly wooded.

Station mark: A drill hole 1 inch in diameter and 4 inches deep inclosed within a triangle cut in the rock. In 1918 Jesse Hill occupied the station "Boulder-east" about 300 meters east of this station and marked it with a  $\frac{3}{4}$  by 10 inch bolt set in a crack of the rock.

Ledge (Ontario, Thunder Bay District; W. B. Fairfield, 1908).—On the shore of Pigeon Bay of Lake Superior. The station is on the low rocky point that makes into the bay and separates the north arm from the south arm. The station is on a smooth ledge on the extreme end of the point. There is a small cove with a pebble beach about 100 meters east of the station.

Station mark: A drill hole within a triangle cut in the rock.

North Arm Rock (Ontario, Thunder Bay District; W. B. Fairfield, 1908).—On the little rock island in Pigeon Bay of Lake Superior that lies just off the eastern end of the point that lies between the north and south arms of the bay. It is on the highest point of the bare island, about 9 meters above the lake.

Station mark: A drill hole within a triangle cut in the rock.

Cliff (Minnesota, Cook County; W. B. Fairfield, 1908).—On the rocky north shore of Pigeon Point which projects into Lake Superior. The station is at the foot of the 30-meter rock cliff, about one-half mile west of the extreme end of the point. It is on the solid ledge about 8 meters above the water. Station mark: A drill hole within a triangle cut in the rock. **Pigeon River Traverse Station 77** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 850 meters above Horn Rapids and about 50 meters above the mouth of a small stream. It is on a large rock on the bank of the river.

Station mark: A bronze disk, stamped "77," set in the rock.

**Pigeon River Traverse Station 75** (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north bank of Pigeon River, about 475 meters above Horn Rapids and at the farthest point on the bend of the river from which the rapids are visible. The station is on a buried bowlder on the sloping bank at the foot of the perpendicular bank that rises here to a height of about 2.5 meters.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 73 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 120 meters above Horn Rapids. The station is on the top of a rock cliff, about 1.2 meters back from the edge of the cliff and about 3 meters above the water.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 69** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 200 meters below Horn Rapids. The station is on a large buried bowlder near the water's edge.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 54 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south shore of Pigeon River, about 370 meters below Horn Rapids. The station is on a large rock at the water's edge. Station mark: A drill hole at the center of a cross cut in the rock.

 $\mathbf{D}'_{\mathbf{r}} = \mathbf{D}'_{\mathbf{r}} = \mathbf{T}_{\mathbf{r}} = \mathbf{C} \mathbf{T}_{\mathbf{r}} = \mathbf{C}$ 

Pigeon River Traverse Station 67 (Ontario, Thunder Bay District, W. B. Fairfield; 1909).—On the north bank of Pigeon River, about 500 meters below Horn Rapids. The station is on a large buried bowlder on the bank of the stream.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 52 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south side of Pigeon River, about 620 meters below Horn Rapids. The station is on a large rock on the bank of the river.

Station mark: A bronze disk, stamped "52," set in the rock.

Pigeon River Traverse Station 65 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 800 meters below Horn Rapids. The Pigeon River Lumber Co.'s road parallels the river about 30 meters back of the station.

Station mark: A bronze disk, stamped "65," set in a large buried bowlder on the bank.

**Pigeon River Traverse Station 63** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about five-eighths of a mile below Horn Rapids. The station is on a buried bowlder on the bank at the foot of a hill and on a bend of the river.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 57 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—Reported moved 3 feet in 1918 and therefore not to be used. On the north bank of Pigeon River on the bend of the river about 1,800 meters upstream from Little Falls. The station is on a large buried bowlder about 1.2 meters above normal water level and just downdream from the mouth of a little stream. From this station one can see down the river almost due east for a distance of about 800 meters and up the river almost due south for about 500 meters.

Station mark: A bronze disk, stamped "57," set in the rock.

**Pigeon River Traverse Station 55** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 1,700 meters upstream from Little Falls. The station is on a large rock near the water's edge about 150 meters downstream from the mouth of a small creek. The river road is on the high bank just above the station.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 49** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 800 meters above Little Falls. The station is on a large rock just at the water's edge and opposite the lower end of an island.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 47 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north shore of Pigeon River, about 400 meters above Little Falls. The station is on a rock on the bank of the river. Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 40. (See description of reference monument 1348.)

Pigeon River Traverse Station 39 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River, about 180 meters below Little Falls, which can be seen from the station. The station is on a large rock near the water's edge.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 37** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north shore of Pigeon River, about 350 meters below Little Falls. The station is on a rock that stands out on a shoal or bar about 6 meters from the shore line nearly opposite the upper end of a small island in the middle of the river. The immediate shore back of the station is low and marshy. The station is awash at high water. Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 35** (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north bank of Pigeon River, about 3 miles above the mouth of the river and about 600 meters below Little Falls. The station is on a large rock on the bank near the water. Two small creeks flow into the river a little above the station; the nearer one is about 70 meters and the farther one about 105 meters from the station. The wagon road is on the high bank just above the station.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 33** (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north bank of Pigeon River, about 2% miles above the mouth of the river and about 700 meters below Little Falls. The station is on a rock on the bank on the big bend of the river.

Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 31** (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north side of Pigeon River, about 2¾ miles above the mouth of the river and about 900 meters below Little Falls. The station is near the water's edge on a large rock on a wooded point at a bend of the river. Station mark: A bronze disk, stamped "31," set in the rock.

Station mark. A biolize disk, stamped of, set in the room

Pigeon River Traverse Station 29 (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north side of Pigeon River, about 2¼ miles above the mouth of the river and about 1,000 meters below Little Falls. The station is on a large flat rock about 8 meters out in the river. The rock is probably awash at high water. Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 27 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918).—On the north bank of Pigeon River, about 2½ miles above the mouth of the river and above the river gorge known as The Canyon. The station is on a large rock near the water's edge.

Station mark: A bronze disk, stamped "27," set in the rock.

**Pigeon River Traverse Station 30** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about three-fourths mile above High Falls and near the head of the rapids above the river gorge known as The Canyon. The station is on a large rock near the water's edge.

Station mark: A bronze disk, stamped "30," set in the rock.

**Pigeon River Traverse Station 26** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 900 meters above High Falls. It is on a flat ledge near the water's edge abreast of the narrowest portion of the stream in the gorge. Three meters back of the station the walls of the gorge rise in perpendicular cliffs.

Station mark: A bronze disk, stamped "26," set in the ledge.

**Pigeon River Traverse Station 24** (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River, about 800 meters above High Falls. The station is on the slope above the cliffs of The Canyon, about 120 meters upstream from its mouth.

Station mark: A bronze disk, stamped "24," set in solid rock.

Pigeon River Traverse Station 22 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918).—On the south bank of Pigeon River just at the mouth of The Canyon. The station is on a large rock close to the water's edge. Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 18 (Minnesota, Cook County; W. B. Fairfield, 1909).—On the south bank of Pigeon River, about 460 meters upstream from High Falls. The station is on a large rock near the river bank. Station mark: A drill hole at the center of a cross cut in the rock.

**Pigeon River Traverse Station 17** (Ontario, Thunder Bay District; W. B. Fairfield, 1909).—On the north shore of Pigeon River, about 520 meters upstream from High Falls. The station is on a large buried bowlder close to the river bank.

Station mark: A bronze disk, stamped "17," set in the rock.

Pigeon River Traverse Station 16 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south shore of Pigeon River, about 380 meters upstream from High Falls and about 80 meters upstream from the mouth of a small creek. The station is on a large buried bowlder near the shore line.

Station mark: A drill hole at the center of a cross cut in the rock.

Pigeon River Traverse Station 14 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On the south side of Pigeon River, about 230 meters above High Falls Dam. The station is on a rocky point at the foot of the rapids.

Station mark A drill hole at the center of a cross cut in the solid rock.

Granite (Ontario, Thunder Bay District; W. B. Fairfield, 1908).-About 550 meters northeast of High Falls of Pigeon River. The station is about 100 meters northwest of the road to High Falls at a point about 300 meters from where the road leaves the main river road. It is on the ridge that rises above the cliffs which are near the road.

Station mark: A drill hole within a triangle cut in the ledge.

View (Ontario, Thunder Bay District; W. B. Fairfield, 1908; 1918).—On the north side of Pigeon River, about 1 mile upstream from the mouth of the river. The station is on the low point of the ridge about 150 meters back from the river, opposite and about northeast of a sharp and narrow bend of the river. It is on a large rock about 90 meters back from the road and about 18 meters above the level of the river.

Station mark: A bronze disk, stamped "9," set in the rock.

Upper (Ontario, Thunder Bay District; W. B. Fairfield, 1908; 1918).-On the north side of Pigeon River, about three-fourths mile above the mouth of the river. The station is about 150 meters back from the river at a point about opposite the upper end of Island "E." It is in a clearing about 30 meters north of the road at a point where the road begins to ascend from the river bottom to higher ground. It is on a large bowlder. There are no other large rocks near it.

Station mark: A bronze disk, stamped "7," set in the bowlder.

Staple Point (Minnesota, Cook County; W. B. Fairfield, 1908) .- On the shore of Lake Superior on the first rocky point on the south side of and east of the mouth of Pigeon River. The station is on the first rock level above the point and about 9 meters above the lake level. A large iron staple has been set in the solid rock at the water's edge just below the station.

Station mark: A drill hole within a triangle cut in the rock.

Rock (Ontario, Thunder Bay District; W. B. Fairfield, 1908).-At the head of Pigeon Bay of Lake Superior on the first rocky point north of the mouth of Pigeon River. The station is about 1 meter above the lake on the solid ledge that projects out from the point. Another large rock, still farther out in the lake and about 1 meter higher than the station, has a hole 3 inches in diameter and 7 inches deep drilled in its outer side for the purpose of holding a ring bolt for a boom fastening.

Station mark: A drill hole within a triangle cut in the rock.

Pigeon River Traverse Station 11 (Ontario, Thunder Bay District; W. B. Fairfield, 1909; 1918) .- On the north side of Pigeon River near High Falls. The station is on the high rocky point 100 meters northeast of the dam at High Falls. It is on the top of the solid ledge just above the road.

Station mark: A bronze disk, stamped "11," set in the ledge.

Pigeon River Traverse Station 10 (Minnesota, Cook County; W. B. Fairfield, 1909; 1918) .- On Pigeon River, about 550 meters below High Falls. The station is on the northeast point of the large island that lies in the southern part of the cove below the rapids from High Falls. "Island H" is just north of the station across a narrow channel. The station is 3 meters back from the shore line on a large rock. Station mark: A bronze disk, stamped "10," set in the rock.

Island I (Ontario, Thunder Bay District; Jesse Hill, 1918).-On Pigeon River, about 540 meters below High Falls. The station is near the middle of the southern part of the most western island of the group of islands lying below the falls.

Station mark: A bronze disk, stamped "I," set in a concrete block.

Island G (Ontario, Thunder Bay District; Jesse Hill, 1918).-On Pigeon River about 575 meters below High Falls. The station is near the middle of a small island that is near the center of the group of islands lying in the slack water below the falls.

Station mark: A bronze disk, stamped "G," set in a concrete block.

Island H (Minnesota, Cook County; Jesse Hill, 1918).-On Pigeon' River, about 575 meters below High Falls. The station is near the middle of a small round island that lies in the southwestern part of a group of islands

Station mark: A bronze disk, stamped "H," set in a concrete block.

Island F (Ontario, Thunder Bay District; Jesse Hill, 1918).—On Pigeon River, about 650 meters below High Falls. The station is near the middle of an island about 40 by 90 meters in size which lies in the north-eastern part of a group of islands.

Station mark: A bronze disk, stamped "F," set in a concrete block.

Island E (Minnesota, Cook County; Jesse Hill, 1918).—On Pigeon River, about 1,300 meters above its mouth. The station is on the west shore of a long, low island. It is about 120 meters downstream from the head of the island.

Station mark: A bronze disk, stamped "E," set in a concrete block.

Island D (Minnesota, Cook County; Jesse Hill, 1918).—On Pigeon River, about 1,000 meters above the mouth of the river. The station is on a small, round island lying near the middle of the stream and on the south side of the main channel.

Station mark: A bronze disk, stamped "D," set in a concrete block.

Island C (Ontario, Thunder Bay District; Jesse Hill, 1918).—On Pigeon River, about 950 meters above the mouth of the river. The station is on the southwest shore of a long, low island lying just north of the middle of the channel. It is about 40 meters downstream from the head of the island.

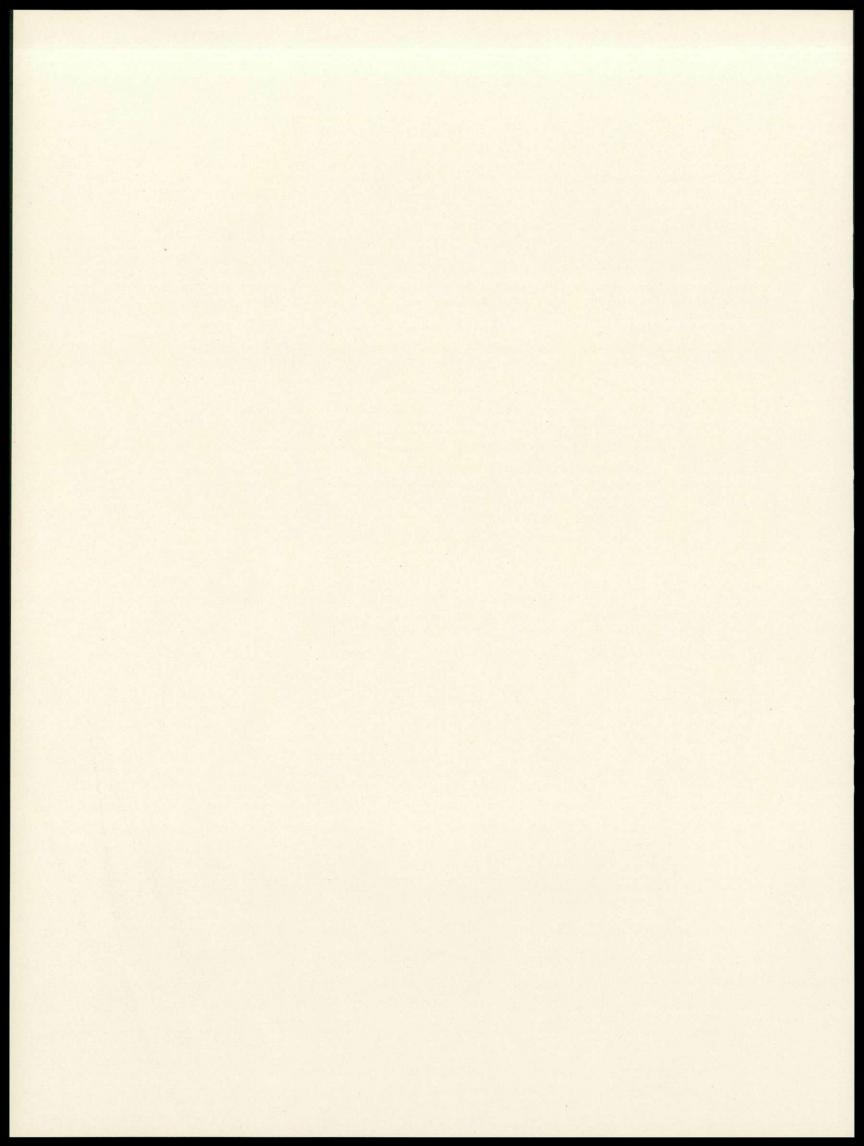

Station mark: A bronze disk, stamped "C," set in a concrete block.

Island B (Ontario, Thunder Bay District; Jesse Hill, 1918).—On Pigeon River, about 840 meters above the mouth of the river. The station is near the middle of a very long, low island lying just north of the middle of the stream.

Station mark: A bronze disk, stamped "B," set in a concrete block.

Island A (Minnesota, Cook County; Jesse Hill, 1918).—On Pigeon River, about 430 meters above the mouth of the river. The station is near the center of a small island lying just south of the middle of the stream. Station mark: A bronze disk, stamped "A," set in a concrete block.

Ban. (See description of reference monument 1364.)
