INTRODUCTION

Article IV of the Treaty of Washington, February 24, 1925, provides for "the maintenance of an effective boundary line" between Canada and the United States. The article further stipulates that

"The said Commissioners shall submit to their respective governments from time to time, at least once in every calendar year, a joint report containing a statement of the inspections made, the monuments and buoys repaired, relocated, rebuilt, moved, and established, and the mileage and location of vistas opened, and shall submit with their reports, plats and tables certified and signed by the Commissioners, giving the locations and geodetic positions of all monuments moved and all additional monuments established within the year, and such other information as may be necessary to keep the boundary maps and records accurately revised."

This joint report is the seventh in a series of special publications that provide revised or supplementary information concerning the geographical positions of the boundary monuments, turning points, reference monuments and control stations that define or govern the location of the boundary between the United States and Canada.

REESTABLISHMENT UNDER THE TREATY OF 1908

Article IV of the Treaty of Washington, April 11, 1908, provided for the International Waterways Commission to ascertain and reestablish the international boundary through the St. Lawrence River and Great Lakes.

In accordance with this provision, the International Waterways Commission submitted to both governments in 1916 a "Report of the International Waterways Commission upon the International Boundary between the Dominion of Canada and the United States through the St. Lawrence River and Great Lakes as Ascertained and Re-established". A mathematical description and definition of this section of the international boundary is given on pages 31-114 of the report. The geodetic datum, or reference surface, to which the geographic positions of the boundary monuments, turning points and reference monuments are mathematically related is the old North American datum as it existed in the year 1916 when the report was submitted.

Article IV of the Treaty of Washington, February 24, 1925, assigned the responsibility of maintaining the international boundary through the St. Lawrence River and Great Lakes to the International Boundary Commission.

A few years after the submission by the International Waterways Commission of its report under Article IV of the 1908 treaty, the United States and Canada adopted a new geodetic datum. The North American Datum of 1927 became the new mathematical reference surface, and it superseded the old geodetic datum used in the computation of the latitude and longitudes of the boundary turning points, monuments and reference monuments that are published in the 1916 report.

The adoption of the 1927 North American Datum and the subsequent recomputation of geographical positions of the international boundary has no effect whatsoever on the physical location of the boundary itself. All boundary points, reference monuments and control points that were used to define the boundary prior to the introduction of the new datum remain unaltered from their original location, and they continue to define the boundary. The small differences between the new geographical positions, and their corresponding 1916 published values are entirely due to mathematical readjustment, and there is no resultant change in territorial sovereignty at any point on the boundary.

Special Report No. 7 contains a list of the geographical positions on the 1927 North American Datum of the boundary turning points, reference monuments and monuments along the international boundary through the St. Lawrence River and Great Lakes. Some of the information contained herein is published in the Commissioners' Special Reports Numbers 2 and 5. It is repeated here only for the convenience of the researcher.

We certify that the foregoing tables are a true record of the conversion of the geographic positions of international boundary points from the old North American datum to the 1927 North American datum. This report covers the international boundary through the St. Lawrence River and Great Lakes. All international boundary turning points, monuments and reference monuments, along this section of the boundary will now be published on the present official geographic datum for North America. The publication of these tables is carried out in accordance with the provisions of Article IV of the Treaty between the United States and His Britannic Majesty in respect of Canada signed at Washington, February 24, 1925.

David C. Fischer
United States Commissioner

Alec C. McEwen
Canadian Commissioner
